Scouting Summary

COMMON THEMES

- Right Fast, averaging 141.6 kph (up to 152.2).
- Typical length is **5-6m** (their good length); median 6.9 m.
- Stock ball is **back of a length down the leg side** (16% of deliveries).
- Goes round the wicket 38% of the time against left-handers.

BIGGEST THREATS

- Takes 25% of wickets pitching **back of a length down the leg side**.
- Beats the bat 23.1% of tracked balls (false-shot 34.1%).
- Most likely to dismiss you **caught** (100% of wickets).
- 75% of catches are behind the wicket (keeper / slips / gully); most often to slip: 1st, gully, square leg: short leg.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (33% of runs).
- Short ball: 37% of deliveries, economy 3.2 — 1 wkts from 34 short balls.
- Most of his runs leak through the leg side (67%) — his main scoring release.

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 4 Tests · 2023-02-28 → 2024-11-27)

He's around his career level lately (avg 23 last 4 vs 23 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	100%	68%	**1.48×**

*Share of his 4 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Slip: 1st 2 · Gully 1 · Square leg: short leg 1

Angle & variations: Round the wicket to LHB (38%), stays over to RHB · slower balls 1.1% (~126 kph)

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
Back of a length down the leg side
25% of mapped wickets (1 of 4)

RUNS — WHERE MOST CONCEDED
Full on the stumps
33% of runs (16 of 48)

Most wickets come from back of a length down the leg side, while he leaks the most runs full on the stumps.

Scoring Profile (vs left-handers)

78% of his runs come in boundaries — a boundary every 9 balls; most runs go to the leg side (67%).

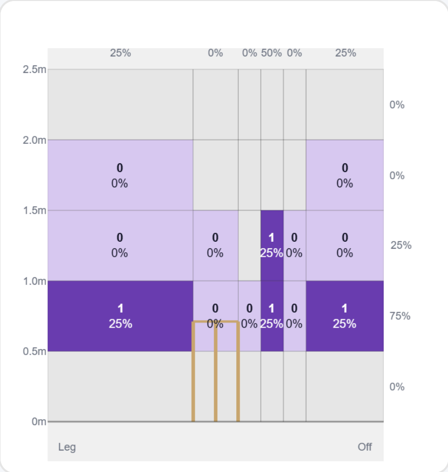
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	9	30	60%	6	3.33
Work/Nudge	5	8	16%	1	1.60

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (18/18) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

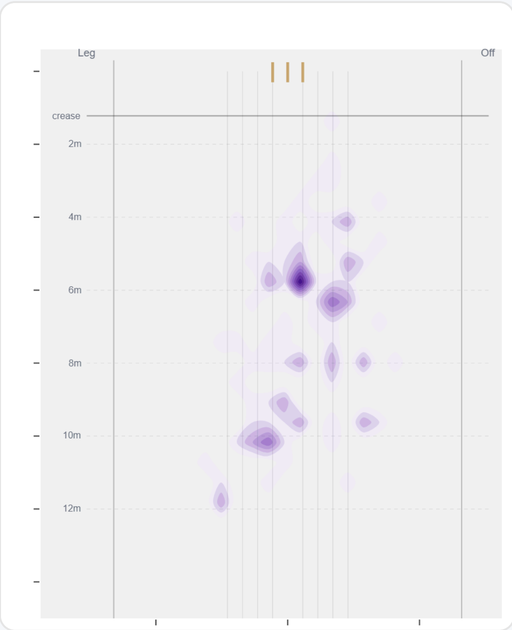


Wicket balls pass the stumps mostly at 5th stump — pitches around down leg and moves it back.

Where They're Scored Off

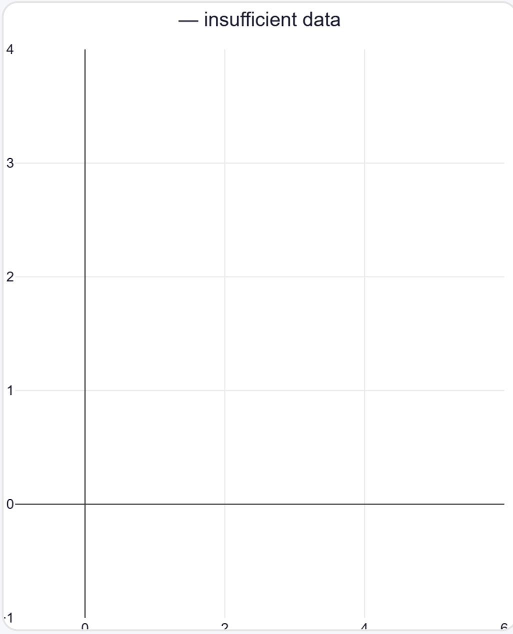
Runs come mostly on the leg side (74%).

Where They Pitch It



Pitches it back of a length down the leg side most often (15%); drops short often (37%).

Where Wickets Come From

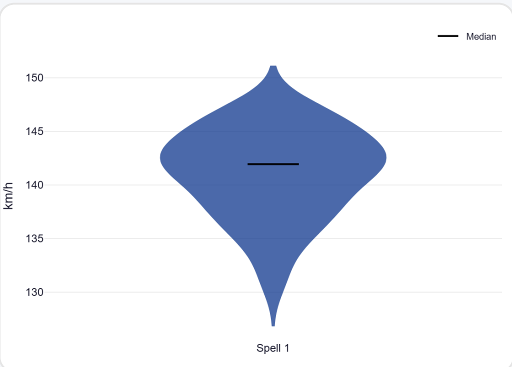


Wickets come mostly from balls pitched back of a length down the leg side.

Speed & Spells

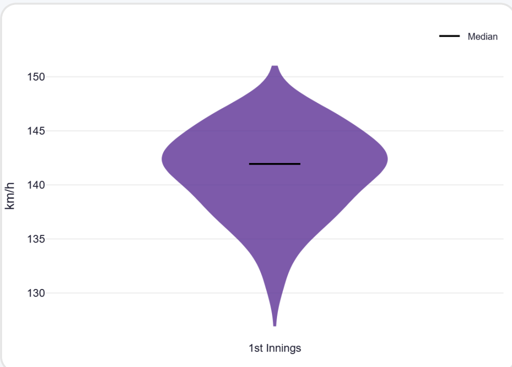
He keeps his pace into the 2nd innings.

Speed by Spell



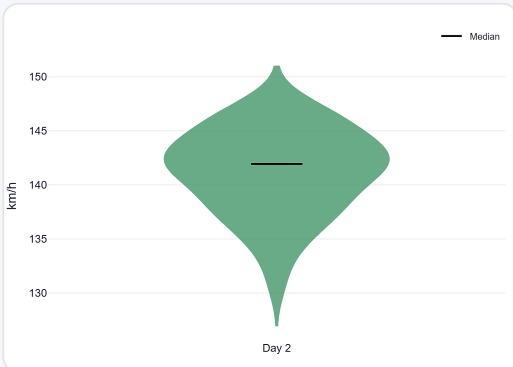
By spell — opening burst vs later spells.

Speed by Innings



1st vs 2nd innings of the match.

Speed by Day



By match day — fatigue across the game.

Sequencing & Over Construction

Across 12 dismissals, the wicket ball lands about 151 cm fuller than the ball before it — that's the change that brings the wicket.

Release Point & Crease Use

A high release point (taller than 89% of right-arm pace); releases tight to the stumps (56 cm out, tighter than 82% of right-arm pace).

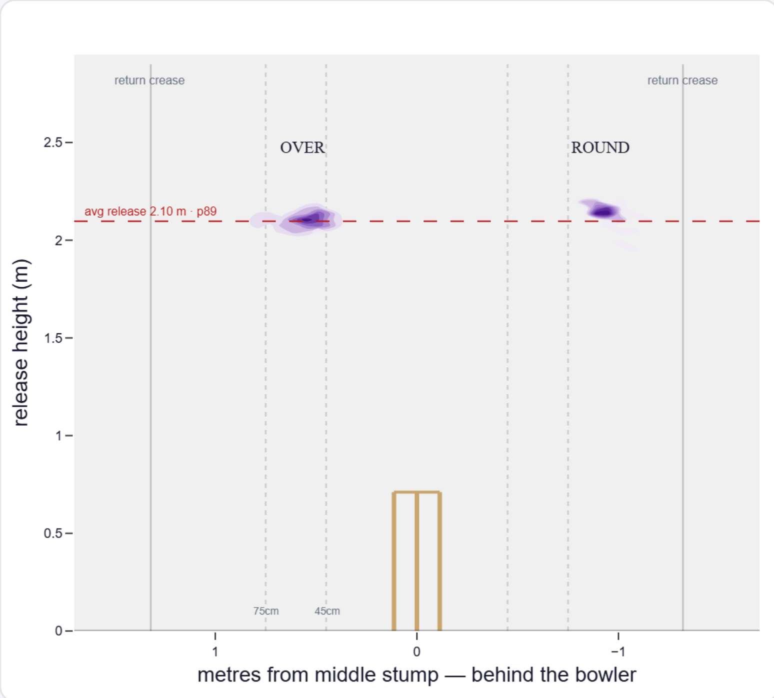
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	11%	50	2.16	1	18.0	50
Standard (45–75)	74%	340	4.59	7	37.1	49
Wide (>75cm)	16%	72	4.08	6	8.2	12

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	92%	12%	79%	9%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce and seams it around.

Generates well above avg seam and about average swing for a pace bowler; seams it away more to left-hand batters (61%).

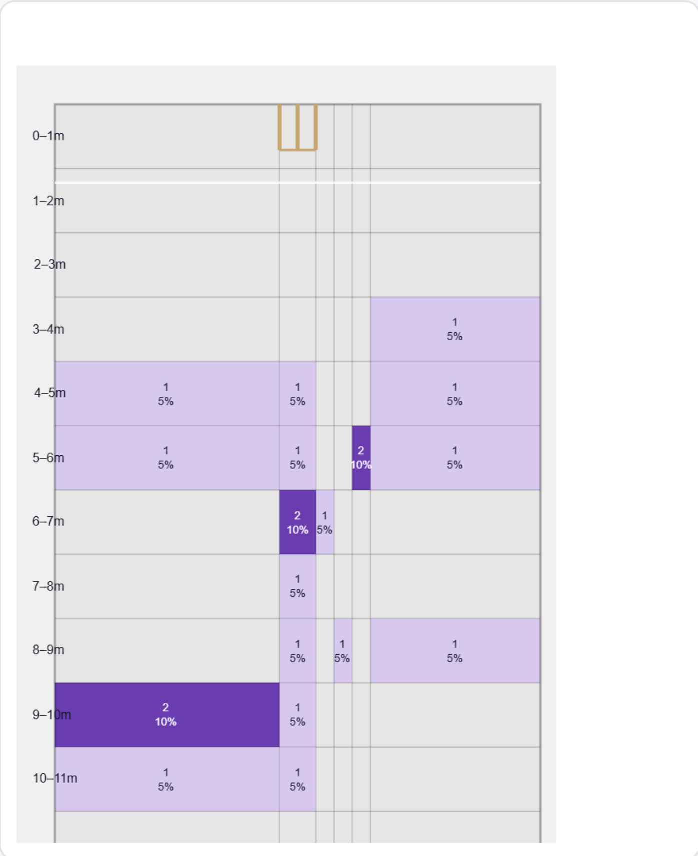
Swing by ball age to left-hand batters: new ball (≤25 ov, n=25) 64% away / 36% in; old ball (≥40 ov, n=22) 73% away / 27% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.88°	58th pct (about average)	69% away / 31% in
Seam	0.66°	84th pct (well above avg)	62% away / 38% in
Bounce	4.2°	70th pct (above avg)	—

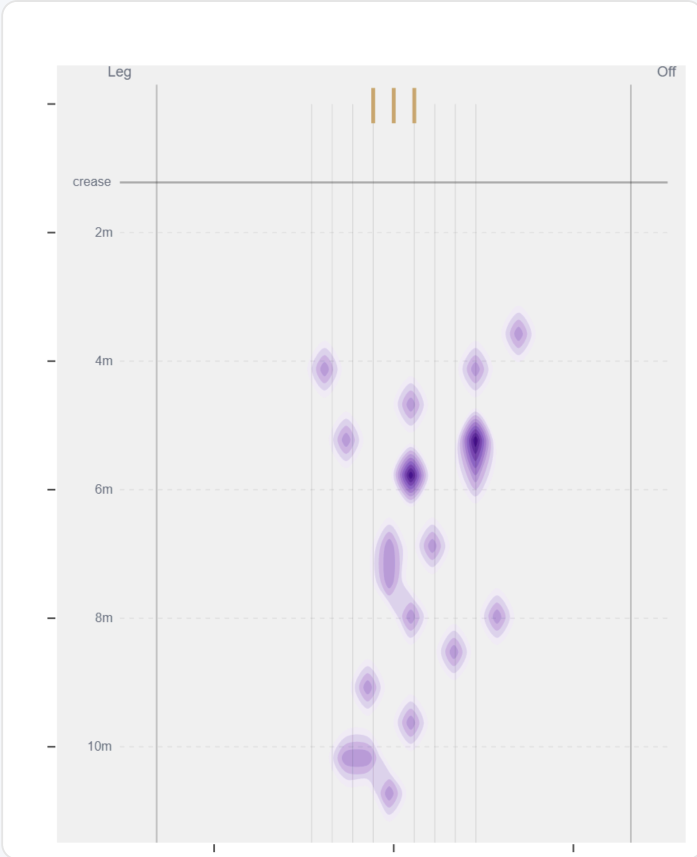
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (19% of play-and-misses). Overall he beats the bat 23.1% of tracked balls (false-shot 34.1%, n=91).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
