Scouting Summary

COMMON THEMES

- Right Fast, averaging 132.5 kph (up to 138.5).
- Typical length is **7-8m** (their good length); median 7.0 m.
- Stock ball is **a good length wide outside off, seaming away, swinging away, passing outside off** (34% of deliveries).
- Goes round the wicket 96% of the time against left-handers.

BIGGEST THREATS

- Most dangerous length is **Good Length** (7 wkts, 2.3% adjusted strike).
- Danger pitching line: **6th stump**.
- Takes 38% of wickets pitching **a good length wide outside off**.
- Beats the bat 7.6% of tracked balls (false-shot 27.5%).
- Most likely to dismiss you **caught** (50% of wickets).
- 100% of catches are behind the wicket (keeper / slips / gully); most often to keeper.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (29% of runs).
- Short ball: 29% of deliveries, economy 6.1 — 3 wkts from 149 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (45%) — his main scoring release.
- Cash in when he goes **full outside off** (economy 5.6, beats the bat only 26%).

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-12-02 → 2026-06-25)

He's around his career level lately (avg 20 last 5 vs 24 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

in-air

How he gets you out	His %	Base	Index
Caught	50%	68%	0.74×
Bowled	30%	18%	**1.68×**
LBW	20%	14%	**1.40×**

*Share of his 10 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Keeper 5

Angle & variations: Round the wicket to LHB (95%), stays over to RHB · slower balls 3.1% (~115 kph)

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — **a good length wide outside off, seaming away, swinging away, passing outside off** (34% of deliveries, economy 3.68). Minor variations: a good length outside off (33%) and full outside off (10%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	seaming away, swinging away	34%	3.68	3	23%
a good length outside off ▶	seaming away, swinging in	33%	2.61	4	25%
full outside off ▶	swinging away, seaming	10%	5.57	0	26%
back of a length wide outside off ▶	swinging, seaming	6%	7.50	0	33%
back of a length outside off ▶	seaming, swinging	4%	9.18	1	29%
full wide outside off ▶	seaming	3%	3.82	0	—

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 335 balls · 6 wkts · econ 4.37

Top ball type	%	Econ	Wkts
a good length wide outside off	34%	5.07	1
a good length outside off	34%	2.50	3
full outside off	9%	8.40	0
back of a length wide outside off	6%	9.00	0

Old ball (31+ ov) · 177 balls · 4 wkts · econ 2.68

Top ball type	%	Econ	Wkts
a good length wide outside off	33%	0.67	2
a good length outside off	30%	2.86	1
full outside off	12%	1.41	0
back of a length outside off	7%	8.00	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) ▶ watch danger balls

WICKETS — WHERE MOST COME FROM
A good length wide outside off
38% of mapped wickets (3 of 8)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
29% of runs (87 of 297)

DANGER LINE
6th stump
3 wkts / 129 balls · 2.2% adj (2.3% raw) · low sample

DANGER LENGTH
Good Length
7 wkts / 292 balls · 2.3% adj (2.4% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 6th stump
3 wkts / 94 balls · 2.6% adj (3.2% raw) · low sample

Most threatening pitching a good length on the 6th stump (7 wkts, 2.3% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.

*Zone shares are over his **mapped** wickets — 2 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	335	6	40.7	4.37	55.8	28%	7.30 m
Old ball (31+ ov)	177	4	19.8	2.68	44.2	27%	7.62 m

Bangs it in more with the old ball (5%→19% short).

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	309	6	40.5	4.72	51.5	25%	7.31 m
Middle (4–7)	195	4	18.8	2.31	48.8	32%	7.42 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

64% of his runs come in boundaries — a boundary every 10 balls; most runs go to the off side (45%); the drive hurts most (19 fours/sixes at 2.6 runs/ball).

BOUNDARY %
64%
runs in 4s/6s

ROTATED %

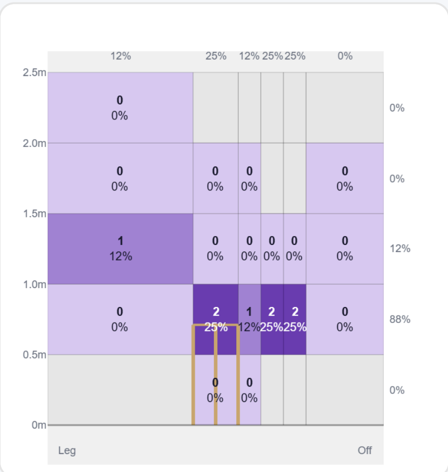
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	39	102	33%	19	2.62
Work/Nudge	54	100	32%	12	1.85
Pull/Hook	28	67	22%	10	2.39
Cut	11	29	9%	5	2.64

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (145/145) — groups with <5 balls omitted.

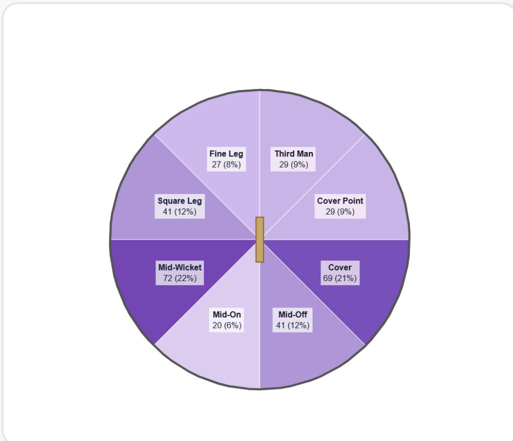
Pitch Maps & Scoring

At the Stumps (wickets)



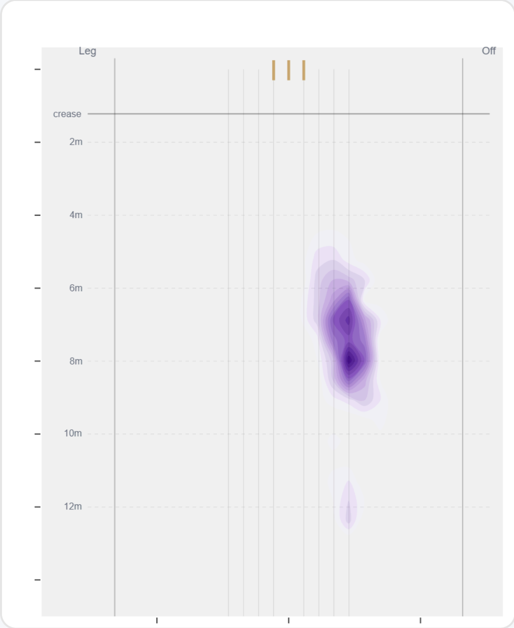
Wicket balls pass the stumps mostly at stumps — pitches around 6th stump and moves it back.

Where They're Scored Off



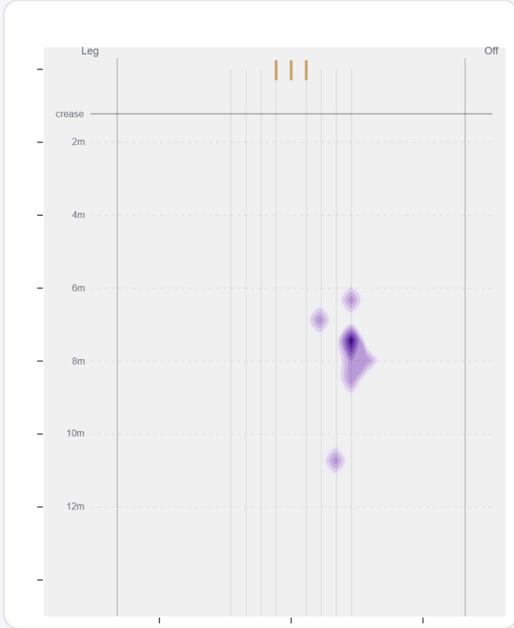
Runs come mostly on the off side (50%).

Where They Pitch It



Pitches it a good length wide outside off most often (33%); drops short often (29%).

Where Wickets Come From

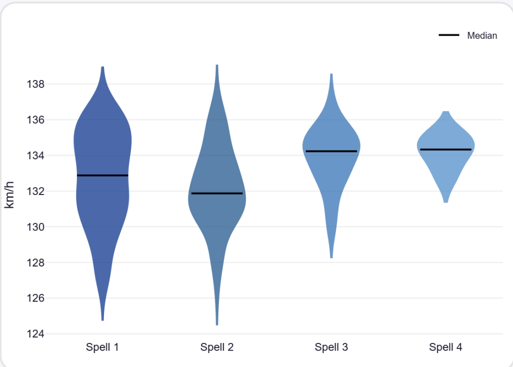


Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 6th stump.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and loses ~1.8 km/h by the later days.

Speed by Spell

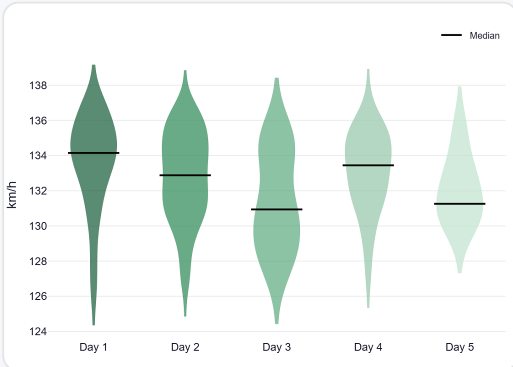


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



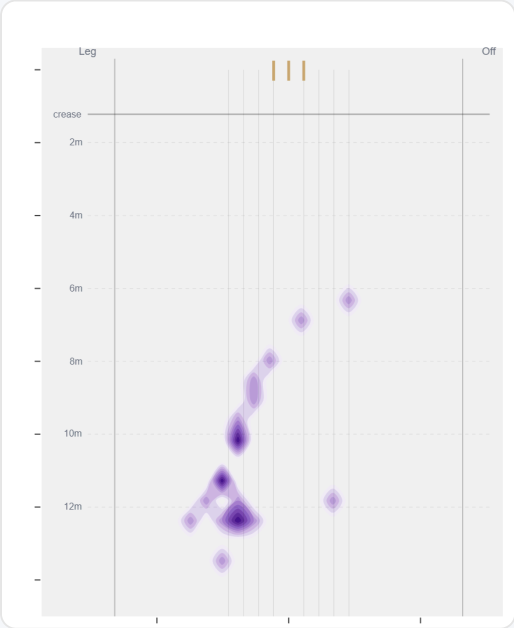
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively round the wicket to left-handers (96%, 490 balls); the over the wicket sample (22 balls) is too small to read into.

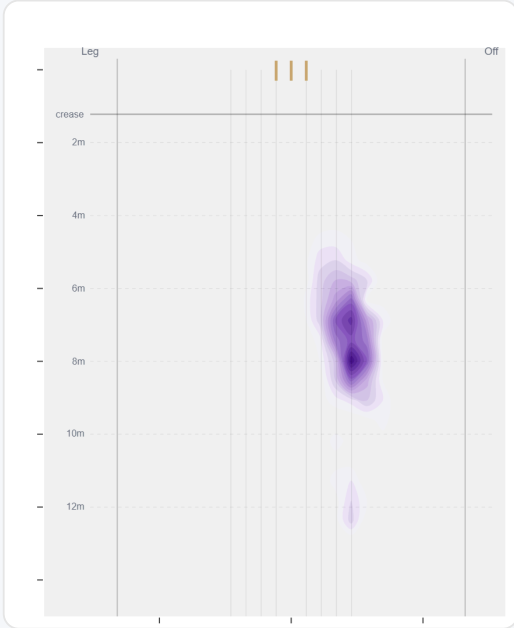
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	22 (4%)	Down leg	—	—	5.73	0	48%
Round	490 (96%)	Wide of 6th	7.3 m	9%	3.70	10	66%

Over the Wicket



Over the wicket — only 22 balls to left-handers, too few to read into.

Round the Wicket



Where he pitches it from round the wicket (490 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ±1.9 m; more repeatable than 84% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 18 dismissals, the wicket ball lands about 44 cm shorter than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.2 m	12%	4.21	3.6%
Ball 2	7.6 m	6%	4.10	2.4%
Ball 3	7.2 m	10%	2.86	1.1%
Ball 4	7.2 m	9%	3.71	2.2%
Ball 5	7.8 m	11%	4.41	1.3%
Ball 6	7.2 m	7%	3.40	1.2%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases wide of the stumps (89 cm out, wider than 94% of right-arm pace).

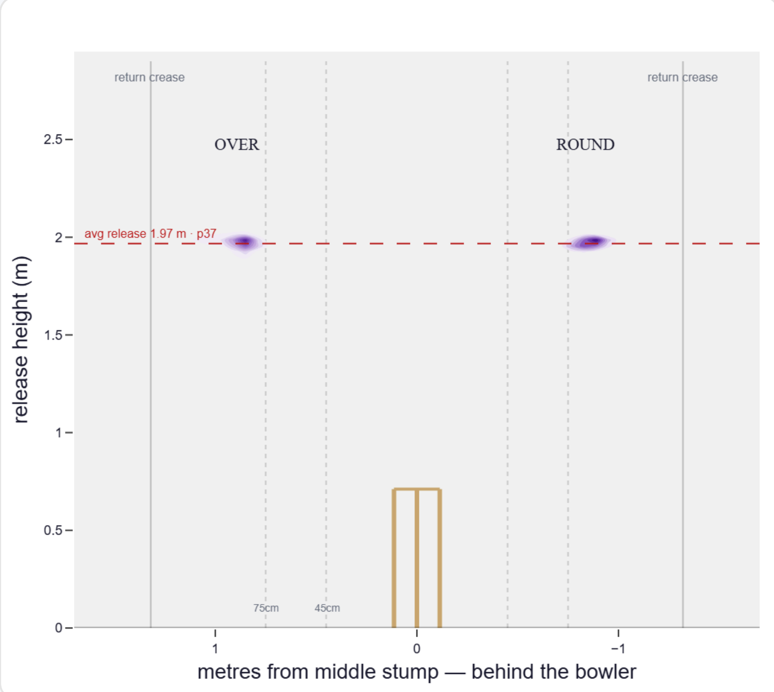
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	3%	34	5.12	2	14.5	17
Wide (>75cm)	96%	961	4.31	21	32.9	46

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	58%	0%	0%	99%
Round the wicket	42%	0%	8%	92%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A moderate mover of the ball.

Generates below avg seam and well below avg swing for a pace bowler; seams it away more to left-hand batters (73%).

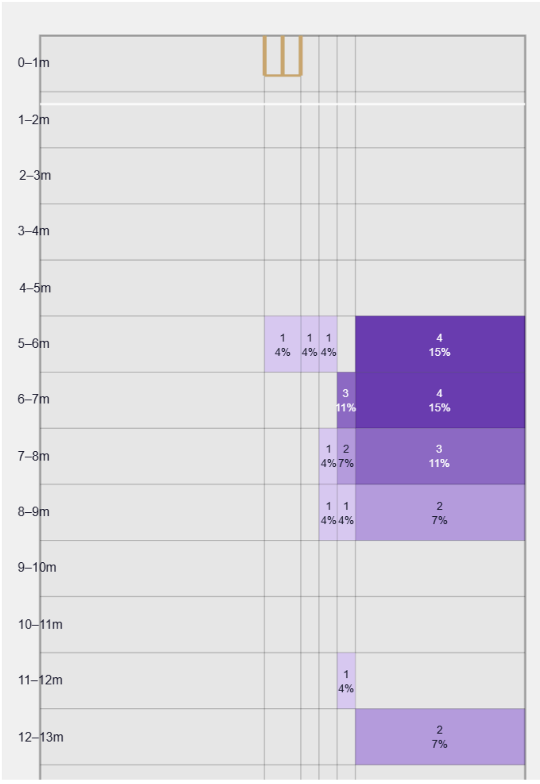
Swing by ball age to left-hand batters: new ball (≤25 ov, n=76) 49% away / 51% in; old ball (≥40 ov, n=56) 57% away / 43% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.63°	19th pct (well below avg)	55% away / 45% in
Seam	0.54°	35th pct (below avg)	73% away / 27% in
Bounce	4.0°	52nd pct (about average)	—

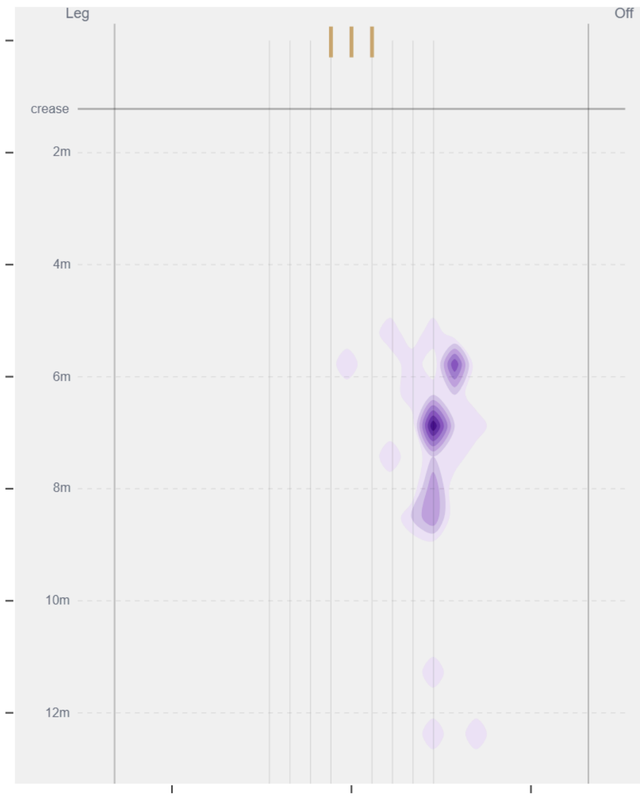
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (33% of play-and-misses). Overall he beats the bat 7.6% of tracked balls (false-shot 27.5%, n=512).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
