49.0	136.4 kph	6.26 m	65%
	P99 145.1	Short 24%	LHB 65% · RHB 0%

Scouting Summary

COMMON THEMES

- Right Fast, averaging 136.4 kph (up to 145.1).
- Typical length is **6-7m** (their good length); median 6.3 m.
- Stock ball is **a good length on the stumps, seaming, swinging, passing outside off** (13% of deliveries).
- Goes round the wicket 65% of the time against left-handers.
- **Round the wicket** he shifts his pitching line from down leg to stumps.

BIGGEST THREATS

- Takes 50% of wickets pitching **a good length down the leg side**.
- Beats the bat 7.5% of tracked balls (false-shot 18.4%).
- Most likely to dismiss you **caught** (100% of wickets).
- 67% of catches are behind the wicket (keeper / slips / gully); most often to square leg: regulation, slip: 3rd, slip: 1st.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length on the stumps** (18% of runs).
- Short ball: 24% of deliveries, economy 7.0 — 2 wkts from 36 short balls.
- Most of his runs leak through the leg side (69%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 8.1).

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Threat Profile ▶ watch wickets ▶ new-ball swing

BEATEN %	FALSE-SHOT %	AVG SEAM	AVG SWING
7.5%	18.4%	0.53°	0.95°
n=147	beaten + edges	below avg	in-air

How he gets you out	His %	Base	Index
Caught	100%	68%	1.48×

*Share of his 3 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Square leg: regulation 1 · Slip: 3rd 1 · Slip: 1st 1

Angle & variations: Round the wicket to LHB (65%), stays over to RHB · slower balls 0.9% (~122 kph)

Stock Ball & Ball Types (vs left-handers)

▶ watch stock balls

Stock ball — a good length on the stumps, seaming, swinging, passing outside off (13% of deliveries, economy 7.20). Minor variations: a good length outside off (13%) and full wide outside off (12%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length on the stumps ▶	seaming, swinging	13%	7.20	0	27%
a good length outside off ▶	seaming, swinging	13%	1.60	1	7%
full wide outside off ▶	seaming, swinging	12%	8.14	0	—
a good length down the leg side ▶	swinging, seaming	11%	3.23	1	—
full outside off ▶	seaming, swinging	9%	3.60	0	—
a good length wide outside off ▶	swinging	9%	3.60	0	—

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM

A good length down the leg side

50% of mapped wickets (1 of 2)

RUNS — WHERE MOST CONCEDED

A good length on the stumps

18% of runs (18 of 101)

Most wickets come from a good length down the leg side, while he leaks the most runs a good length on the stumps.

*Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Scoring Profile (vs left-handers)

47% of his runs come in boundaries — a boundary every 10 balls; most runs go to the leg side (69%); runs come mostly by working him around (32% of runs).

BOUNDARY %

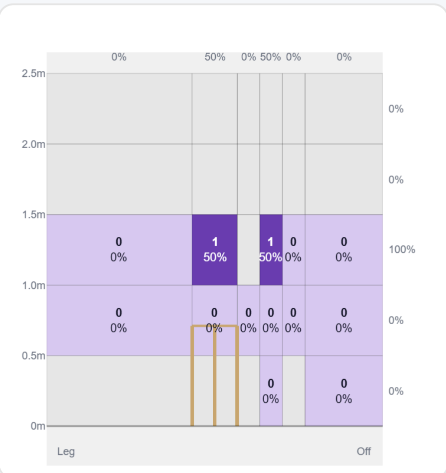
Work/Nudge	21	35	32%	3	1.67
Cut	6	18	17%	4	3.00

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (63/63) — groups with <5 balls omitted.

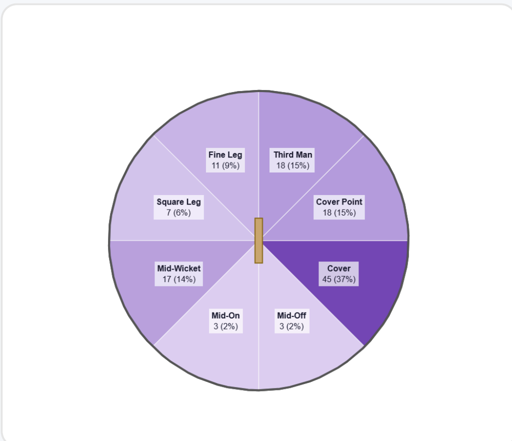
Pitch Maps & Scoring

At the Stumps (wickets)



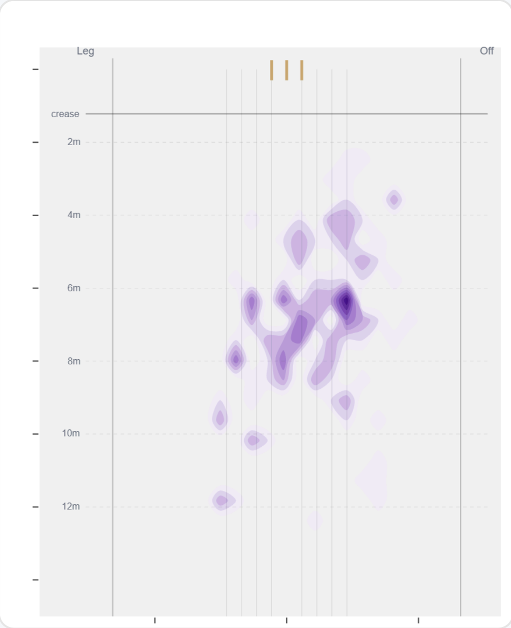
Wicket balls pass the stumps mostly at stumps — pitches around down leg and moves it back.

Where They're Scored Off



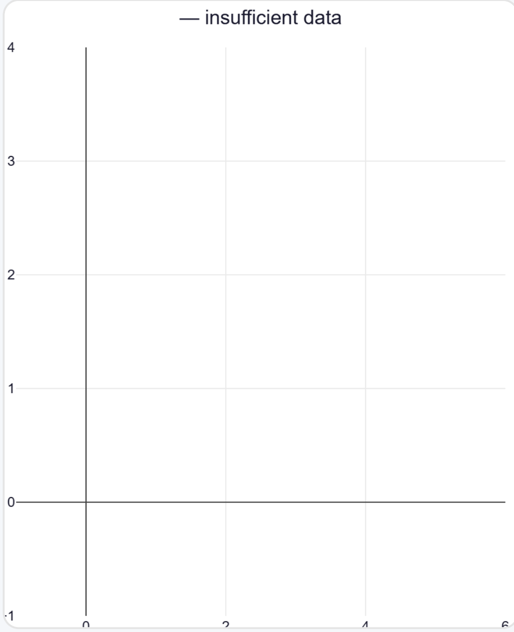
Runs come mostly on the leg side (69%).

Where They Pitch It



Pitches it a good length on the stumps most often (13%); mixes in the short ball (24%).

Where Wickets Come From

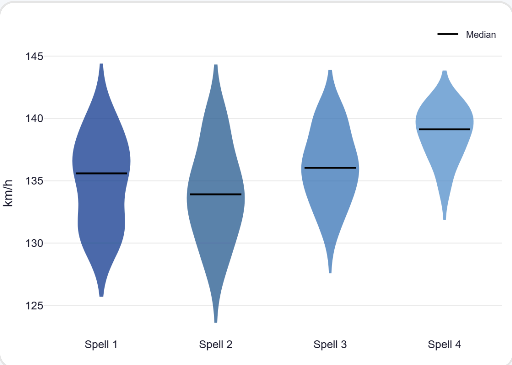


Wickets come mostly from balls pitched a good length down the leg side.

Speed & Spells

He holds his pace across spells, is quicker in the 2nd innings, and loses ~2.4 km/h by the later days.

Speed by Spell

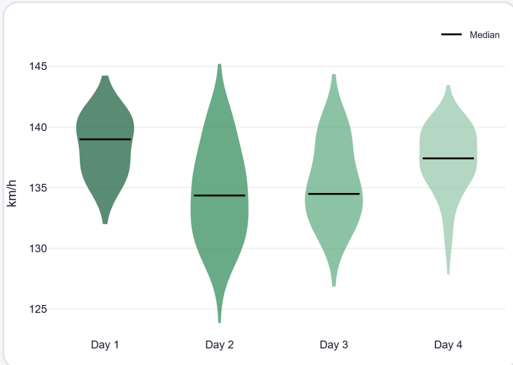


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



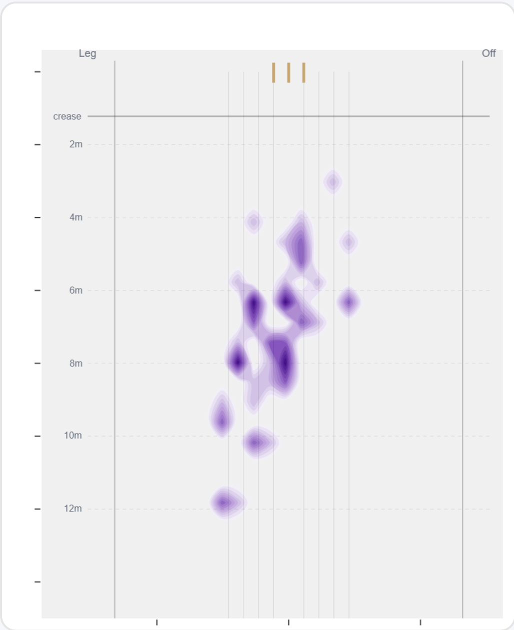
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to stumps — economy 4.47→5.12, a wicket every 51→48 balls (over→round).

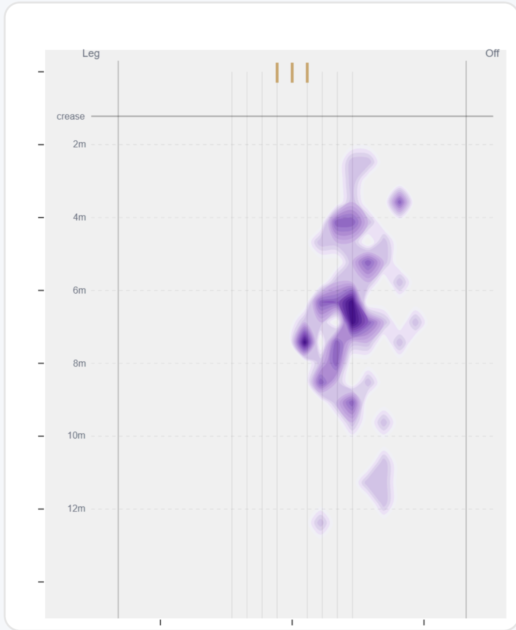
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	51 (35%)	Down leg	7.0 m	10%	4.47	1	42%
Round	96 (65%)	Stumps	6.8 m	8%	5.12	2	49%

Over the Wicket



Where he pitches it from over the wicket (51 balls).

Round the Wicket



Where he pitches it from round the wicket (96 balls).

Sequencing & Over Construction

Release Point & Crease Use

A mid-height release point; releases wide of the stumps (75 cm out, wider than 73% of right-arm pace).

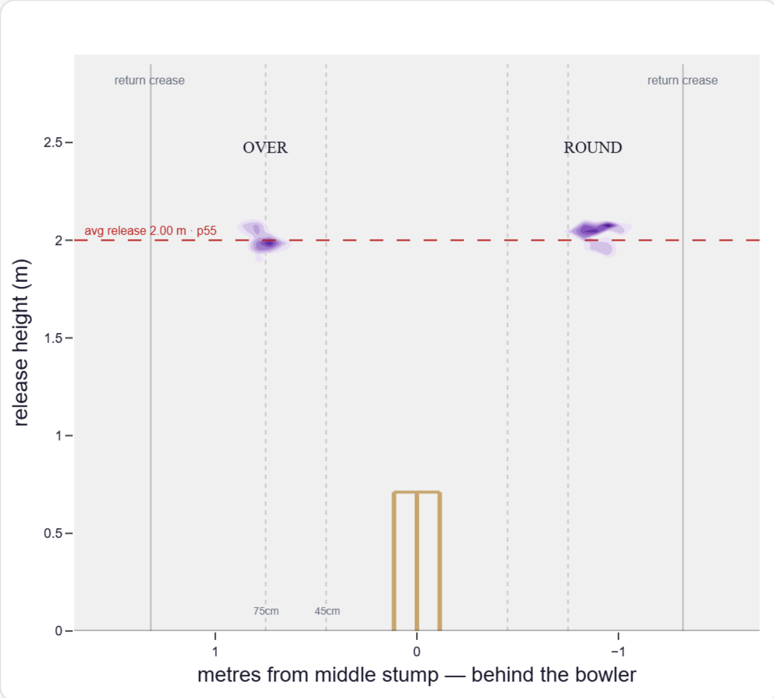
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	35%	116	5.07	3	32.7	39
Wide (>75cm)	65%	220	3.76	3	46.0	73

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	81%	0%	43%	57%
Round the wicket	19%	0%	0%	100%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A swing bowler who moves it both ways (43% away / 57% in); skids through at a lower trajectory.

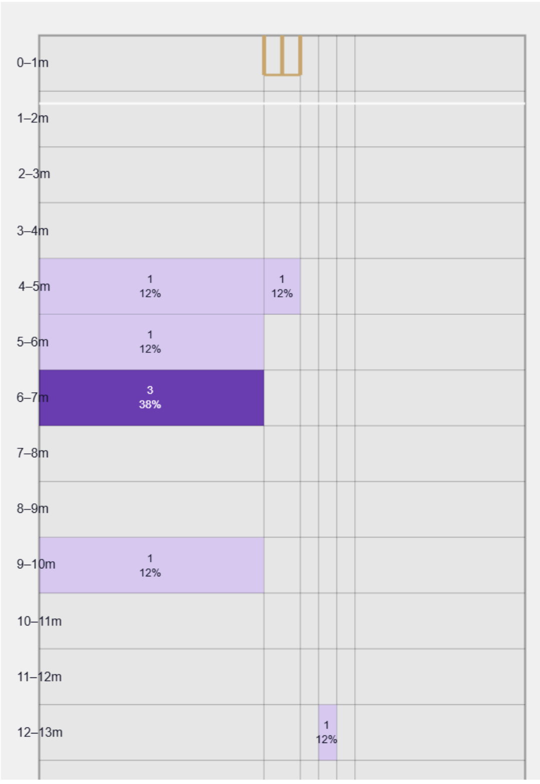
Generates below avg seam and above avg swing for a pace bowler; seams it away more to left-hand batters (60%).

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.95°	70th pct (above avg)	43% away / 57% in
Seam	0.53°	29th pct (below avg)	60% away / 40% in
Bounce	3.5°	8th pct (well below avg)	—

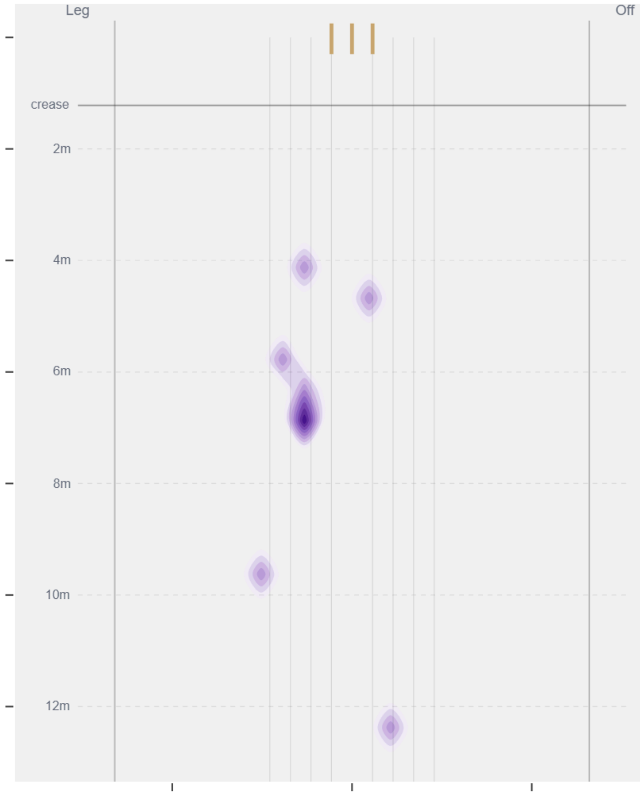
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Down leg** (38% of play-and-misses). Overall he beats the bat 7.5% of tracked balls (false-shot 18.4%, n=147).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
