Scouting Summary

COMMON THEMES

- Right Fast, averaging 136.8 kph (up to 147.4).
- Typical length is **7-8m** (their good length); median 6.9 m.
- Stock ball is **a good length wide outside off, seaming both ways, swinging away, passing outside off** (15% of deliveries).
- Goes round the wicket 48% of the time against left-handers.
- **Round the wicket** he shifts his pitching line from stumps to wide of 6th.

BIGGEST THREATS

- Most dangerous length is **Yorker/Full** (7 wkts, 4.0% adjusted strike).
- Danger pitching line: **5th stump** (round the wicket).
- Takes 11% of wickets pitching **a good length on the stumps**, over the wicket.
- Beats the bat 11.6% of tracked balls (false-shot 20.5%).
- Most likely to dismiss you **caught** (74% of wickets).
- 55% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 2nd, gully.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (11% of runs).
- Short ball: 27% of deliveries, economy 3.9 — 27 wkts from 1144 short balls.
- Away from yorker/full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (48%) — his main scoring release.

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2024-12-26 → 2025-10-20)

He's less penetrative of late (avg 25 in his last 5 Tests vs 21 career).

How he gets you out	His %	Base	Index
Caught	74%	68%	**1.09×**
Bowled	17%	18%	**0.98×**
LBW	9%	14%	0.61×

*Share of his 103 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Keeper 21 · Slip: 2nd 7 · Gully 5 · Slip: 1st 5 · Slip: 3rd 4 · Square leg: short leg 4

Angle & variations: Round the wicket to LHB (48%), stays over to RHB · slower balls 3.2% (~123 kph)

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — a good length wide outside off, seaming both ways, swinging away, passing outside off (15% of deliveries, economy 2.47). Minor variations: a good length on the stumps (15%) and a good length down the leg side (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	seaming both ways, swinging away	15%	2.47	11	20%
a good length on the stumps ▶	seaming back, swinging both ways	15%	2.38	11	19%
a good length down the leg side ▶	swinging both ways, seaming back	13%	2.59	7	23%
a good length outside off ▶	seaming away, swinging both ways	13%	2.09	15	25%
full on the stumps ▶	swinging both ways, seaming both ways	7%	4.38	13	23%
full outside off ▶	swinging both ways, seaming both ways	7%	4.59	5	25%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 2,229 balls · 47 wkts · econ 3.01

Top ball type	%	Econ	Wkts
a good length on the stumps	18%	1.79	8
a good length down the leg side	15%	2.56	1
a good length wide outside off	15%	2.13	7
a good length outside off	12%	2.01	4

*Most lethal: **back of length Down leg** (4.3 wkts/100).*

Old ball (31+ ov) · 1,977 balls · 56 wkts · econ 3.70

Top ball type	%	Econ	Wkts
a good length wide outside off	16%	2.81	4
a good length outside off	13%	2.17	11
a good length on the stumps	12%	3.38	3
a good length down the leg side	11%	2.62	6

*Most lethal: **yorker/full Stumps** (7.3 wkts/100).*

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) ▶ watch danger balls

WICKETS — WHERE MOST COME FROM
A good length on the stumps
11% of mapped wickets (11 of 96)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
11% of runs (255 of 2237)

DANGER LINE
5th stump
13 wkts / 329 balls · 3.7% adj (4.0% raw)

DANGER LENGTH
Yorker/Full
7 wkts / 144 balls · 4.0% adj (4.9% raw)

MOST LETHAL ZONE (BY RATE)
Yorker/Full / Stumps
6 wkts / 51 balls · 6.1% adj (11.8% raw)

Most threatening pitching full on the 5th stump (7 wkts, 4.0% strike). Most wickets come from a good length on the stumps, while he leaks the most runs a good length wide outside off.

*Zone shares are over his **mapped** wickets — 7 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Danger by ball age

NEW BALL (≤30 OV)

back of length Down leg

most lethal cell · 4.3 wkts/100 · danger length back of length · 47 wkts off 2,229 balls

OLD BALL (31+ OV)

yorker/full Stumps

most lethal cell · 7.3 wkts/100 · danger length yorker/full · 56 wkts off 1,977 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	2,229	47	23.8	3.01	47.4	21%	6.98 m
Old ball (31+ ov)	1,977	56	21.8	3.70	35.3	20%	7.31 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	2,350	45	27.3	3.14	52.2	20%	6.92 m
Middle (4–7)	1,258	26	29.0	3.60	48.4	17%	7.40 m
Tail (8–11)	598	32	11.0	3.53	18.7	32%	7.45 m

Bangs it in more with the old ball (5%→16% short); more short balls at the tail (19% vs 7% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

58% of his runs come in boundaries — a boundary every 13 balls; most runs go to the leg side (48%); the drive hurts most (55 fours/sixes at 2.7 runs/ball).

BOUNDARY %
58%
runs in 4s/6s

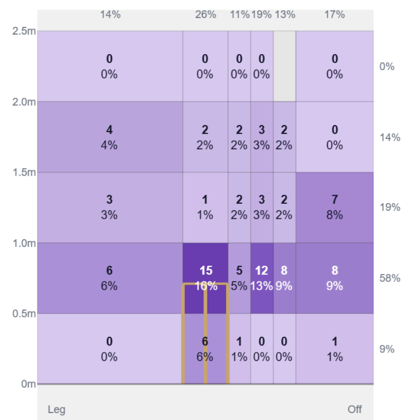
Direction from ball-tracking (all scoring shots); shot type recorded on 48% of scoring balls (498/1044) — groups with <5 balls omitted.

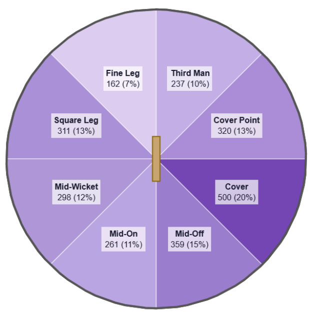
Pitch Maps & Scoring

At the Stumps (wickets)



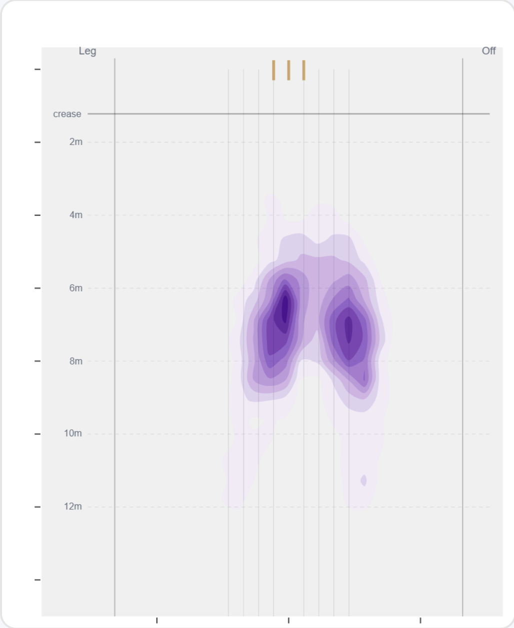
Wicket balls pass the stumps mostly at stumps.

Where They're Scored Off



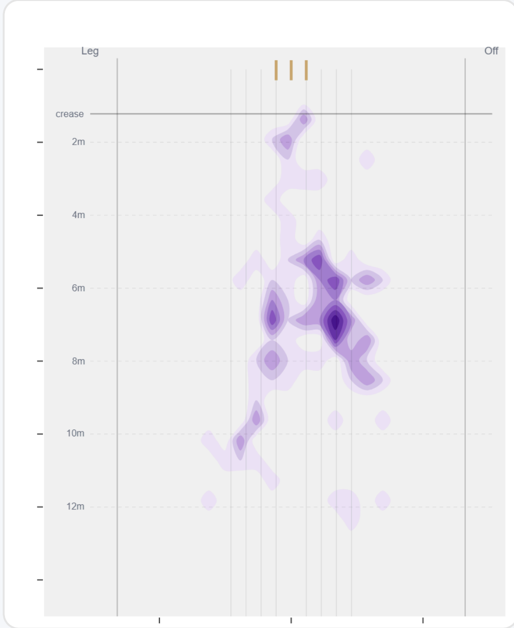
Runs come mostly on the leg side (52%).

Where They Pitch It



Pitches it a good length wide outside off most often (15%); mixes in the short ball (27%).

Where Wickets Come From

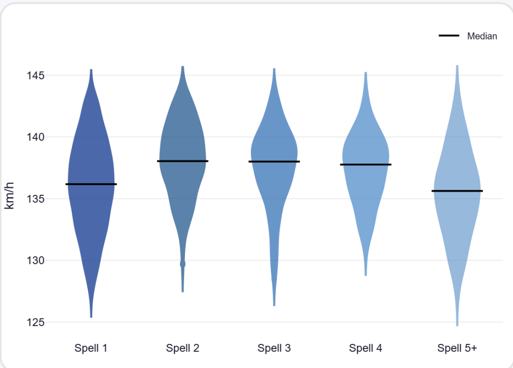


Wickets come mostly from balls pitched a good length on the stumps, but strikes most often pitching on the 5th stump.

Speed & Spells

He is ~2.1 km/h quicker in later spells, keeps his pace into the 2nd innings, and loses ~1.5 km/h by the later days.

Speed by Spell

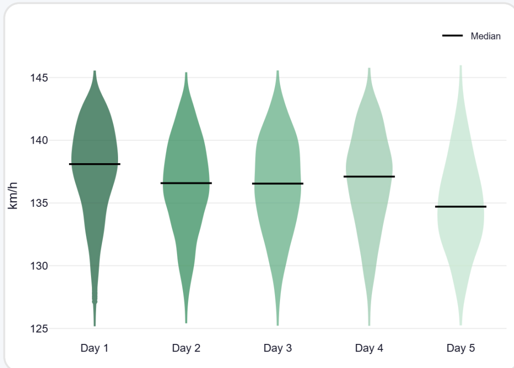


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



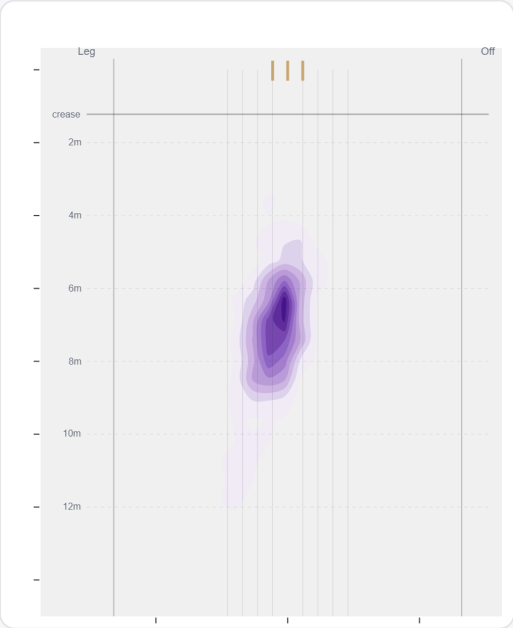
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 3.36→3.30, a wicket every 43→38 balls (over→round).

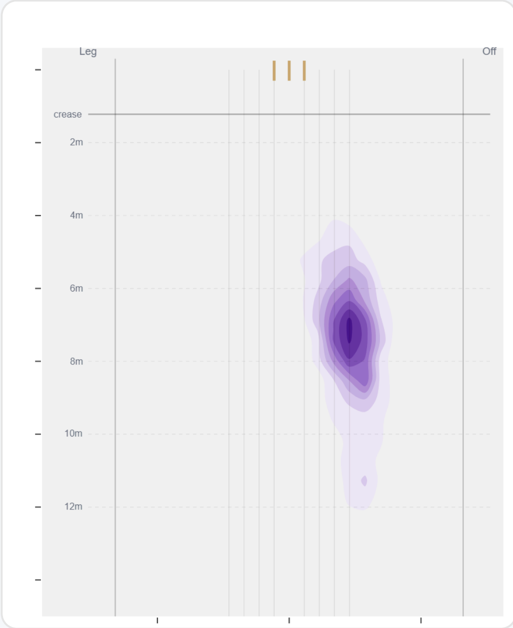
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	2174 (52%)	Stumps	7.0 m	10%	3.36	50	60%
Round	2032 (48%)	Wide of 6th	7.2 m	10%	3.30	53	56%

Over the Wicket



Where he pitches it from over the wicket (2174 balls).

Round the Wicket



Where he pitches it from round the wicket (2032 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ±2.1 m; more repeatable than 45% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 35% of the time after banging one in; and tends to strike with a straighter ball after working across the batter (38% straighter than the ball before).

Across 220 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.1 m	8%	3.53	2.1%
Ball 2	7.2 m	7%	3.49	2.4%
Ball 3	7.2 m	10%	3.34	2.5%
Ball 4	7.1 m	9%	3.44	2.8%
Ball 5	7.2 m	11%	3.05	2.7%
Ball 6	6.9 m	9%	3.21	2.3%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 91% of right-arm pace); releases about 71 cm from the middle stump; varies his spot on the crease a lot (more than 80% of right-arm pace).

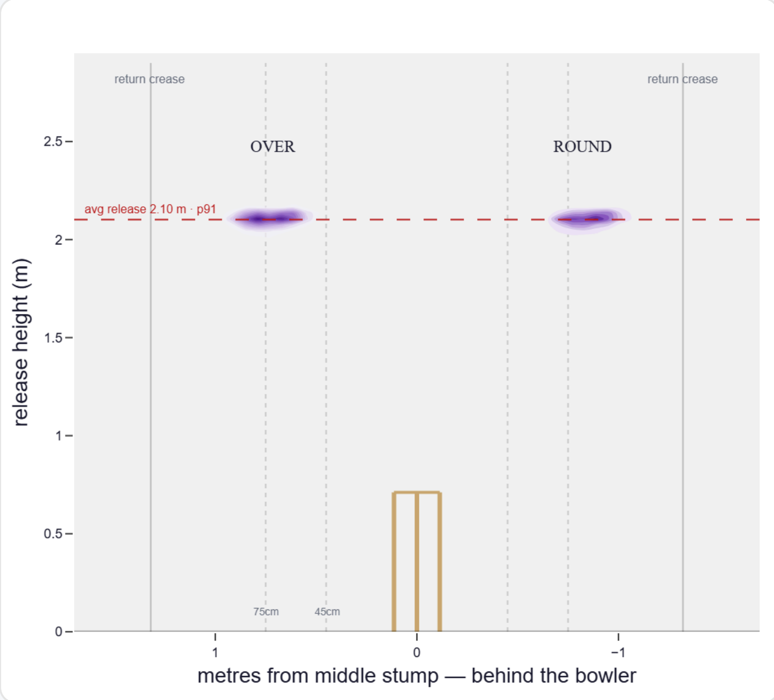
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	47%	4,839	3.11	122	20.5	40
Wide (>75cm)	52%	5,348	3.12	141	19.7	38

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	82%	0%	54%	46%
Round the wicket	18%	0%	20%	80%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A seam bowler who moves it both ways (47% away / 53% in); gets extra bounce.

Generates above avg seam and below avg swing for a pace bowler; seams it in more to left-hand batters (52%).

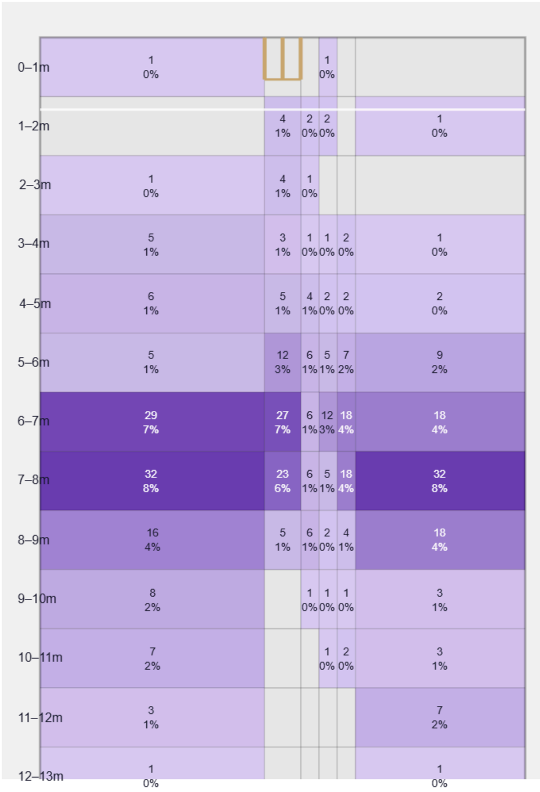
Swing by ball age to left-hand batters: new ball (≤25 ov, n=724) 48% away / 52% in; old ball (≥40 ov, n=713) 60% away / 40% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.75°	37th pct (below avg)	55% away / 45% in
Seam	0.63°	74th pct (above avg)	47% away / 53% in
Bounce	4.1°	61st pct (above avg)	—

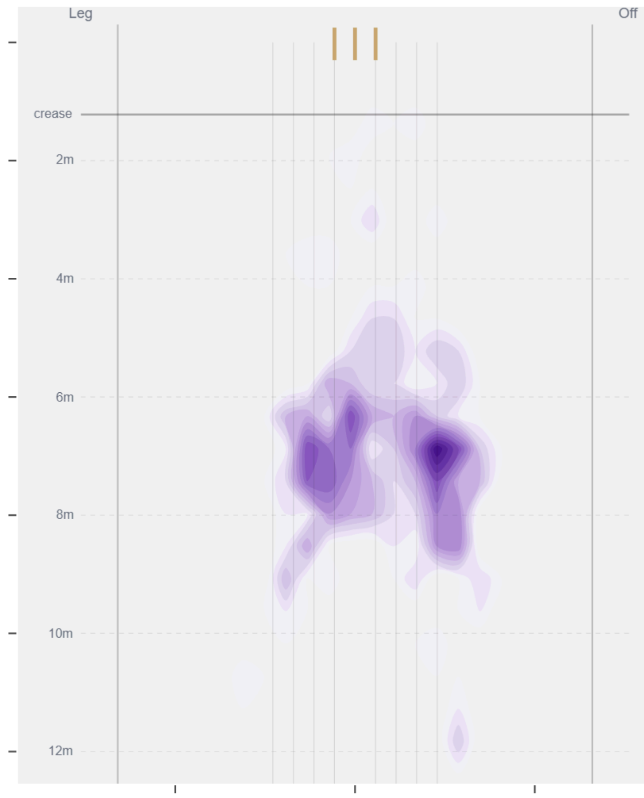
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Down leg** (19% of play-and-misses). Overall he beats the bat 11.6% of tracked balls (false-shot 20.5%, n=3,724).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
