Scouting Summary

COMMON THEMES

- Off Spin, averaging 88.0 kph (up to 96.6).
- Typical length is **4-5m** (their good length); median 4.6 m.
- Stock ball is **full wide outside off, turning in, drifting away, hitting the top of off** (26% of deliveries).
- Goes round the wicket 28% of the time against right-handers.
- **Round the wicket** he shifts his pitching line from wide of 6th to stumps.
- Turns it 4.3° on average; 30% of balls turn ≥5°.

BIGGEST THREATS

- Most dangerous length is **Good Length** (119 wkts, 1.6% adjusted strike).
- Danger pitching line: **Stumps** (round the wicket).
- Takes 25% of wickets pitching **full wide outside off**, over the wicket.
- Beats the bat 6.8% of tracked balls (false-shot 19.8%).
- Most likely to dismiss you **caught** (69% of wickets).
- 15% of catches are behind the wicket (keeper / slips / gully); most often to slip: 1st, square leg: short leg, fine leg: leg slip.
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (26% of runs).
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (53%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 3.4, beats the bat only 24%).

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-06-11 → 2025-12-17)

He's around his career level lately (avg 29 last 5 vs 30 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

Angle & variations: Uses round the wicket to both (LHB 96% · RHB 27%)

Stock Ball & Ball Types (vs right-handers) ▶ watch stock balls

Stock ball — full wide outside off, turning in, drifting away, hitting the top of off (26% of deliveries, economy 3.39). Minor variations: full outside off (23%) and a good length wide outside off (12%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full wide outside off ▶	turning in, drifting away	26%	3.39	93	24%
full outside off ▶	turning in, drifting away	23%	3.06	76	18%
a good length wide outside off ▶	turning in, drifting away	12%	2.90	34	19%
full on the stumps ▶	turning in, drifting away	10%	2.92	40	15%
a good length outside off ▶	turning in, drifting away	10%	2.42	40	21%
full in the channel ▶	turning in, drifting away	8%	3.17	33	20%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 6,190 balls · 86 wkts · econ 3.04

Top ball type	%	Econ	Wkts
full wide outside off	28%	3.21	25
full outside off	22%	3.02	17
a good length wide outside off	13%	2.91	5
a good length outside off	9%	2.44	9

*Most lethal: **good length Stumps** (2.9 wkts/100).*

Old ball (31+ ov) · 17,580 balls · 281 wkts · econ 3.12

Top ball type	%	Econ	Wkts
full wide outside off	26%	3.46	68
full outside off	23%	3.07	59
a good length wide outside off	12%	2.90	29
full on the stumps	11%	2.97	31

*Most lethal: **good length Stumps** (2.1 wkts/100).*

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) ▶ watch danger balls

WICKETS — WHERE MOST COME FROM
Full wide outside off
25% of mapped wickets (91 of 366)

RUNS — WHERE MOST CONCEDED
Full wide outside off
26% of runs (3167 of 12162)

DANGER LINE
Stumps
70 wkts / 3,714 balls · 1.9% adj (1.9% raw)

DANGER LENGTH
Good Length
119 wkts / 7,349 balls · 1.6% adj (1.6% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / Stumps
30 wkts / 1,235 balls · 2.4% adj (2.4% raw)

Most threatening pitching a good length on the stumps (119 wkts, 1.6% strike). Most wickets come from full wide outside off, while he leaks the most runs full wide outside off.

*Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Danger by ball age

NEW BALL (≤30 OV)

good length Stumps

most lethal cell · 2.9 wkts/100 · danger length good length · 86 wkts off 6,190 balls

OLD BALL (31+ OV)

good length Stumps

most lethal cell · 2.1 wkts/100 · danger length good length · 281 wkts off 17,580 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	6,190	86	36.5	3.04	72.0	20%	4.67 m
Old ball (31+ ov)	17,580	281	32.5	3.12	62.6	20%	4.62 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	6,854	83	41.1	2.99	82.6	19%	4.68 m
Middle (4–7)	12,726	161	41.8	3.17	79.0	17%	4.61 m
Tail (8–11)	4,190	123	17.4	3.06	34.1	28%	4.62 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

46% of his runs come in boundaries — a boundary every 18 balls; most runs go to the leg side (53%); the sweep hurts most (277 fours/sixes at 2.3 runs/ball).

BOUNDARY %
46%
runs in 4s/6s

ROTATED %

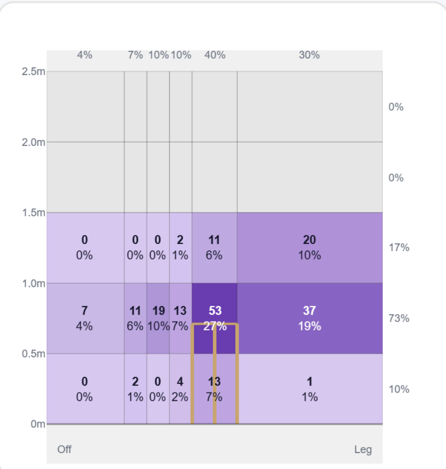
Pull/Hook	63	147	3%	23	2.33

Direction from ball-tracking (all scoring shots); shot type recorded on 38% of scoring balls (2521/6677) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

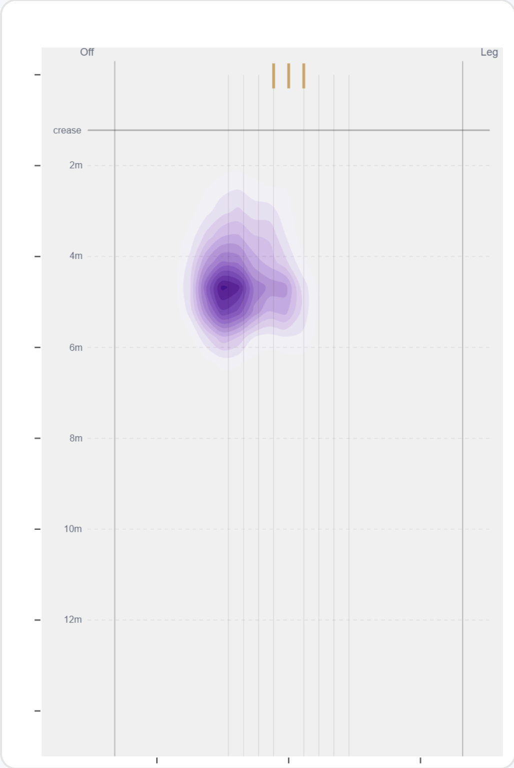


Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Where They're Scored Off

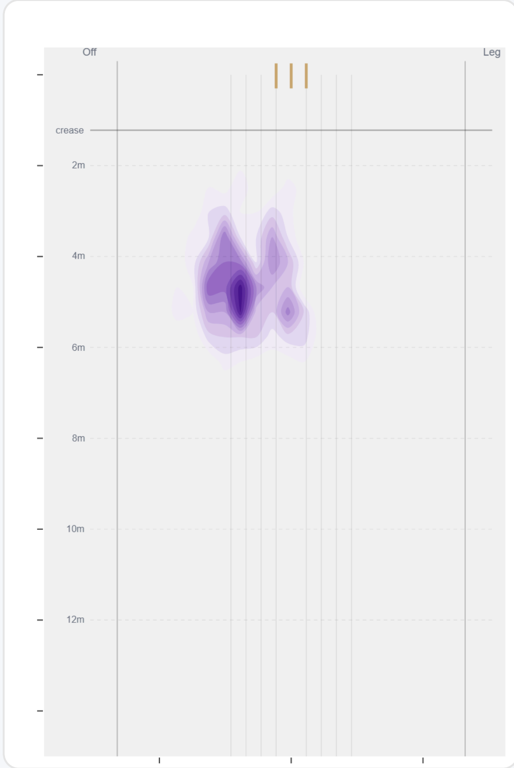
Runs come mostly on the leg side (58%).

Where They Pitch It



Pitches it full wide outside off most often (25%); rarely drops short (0%).

Where Wickets Come From

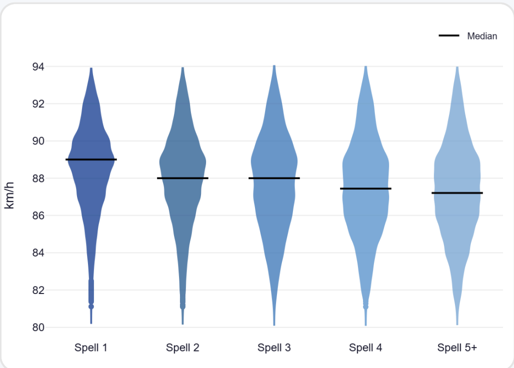


Wickets come mostly from balls pitched full wide outside off, but strikes most often pitching on the stumps.

Speed & Spells

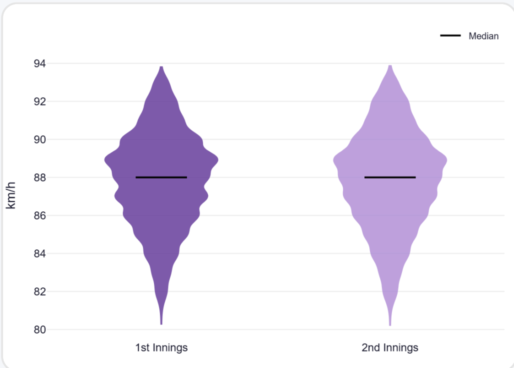
He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell



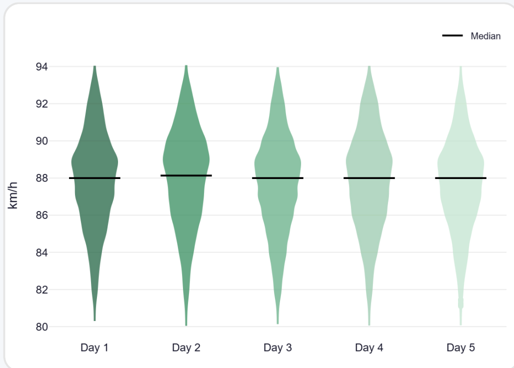
By spell — opening burst vs later spells.

Speed by Innings



1st vs 2nd innings of the match.

Speed by Day



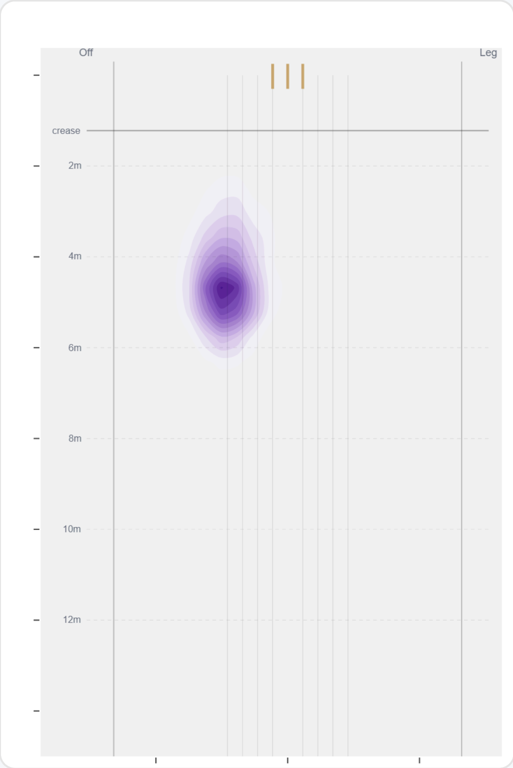
By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Round the wicket his pitching line moves from wide of 6th to stumps — economy 3.10→3.08, a wicket every 64→66 balls (over→round).

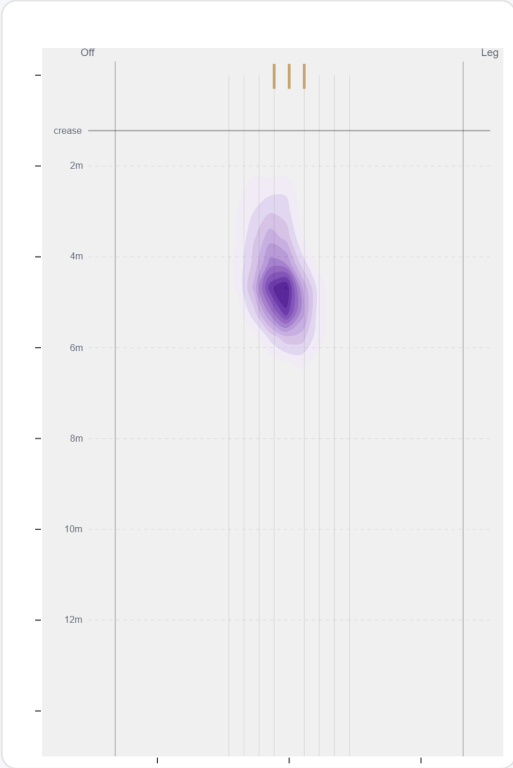
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	17154 (72%)	Wide of 6th	4.6 m	0%	3.10	266	47%
Round	6616 (28%)	Stumps	4.6 m	0%	3.08	101	42%

Over the Wicket



Where he pitches it from over the wicket (17154 balls).

Round the Wicket



Where he pitches it from round the wicket (6616 balls).

Sequencing & Over Construction

Relentlessly consistent — repeats his length ball after ball (length spread ±0.9 m; more repeatable than 85% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Takes his wickets with the stock ball rather than obvious set-ups.

Across 465 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.6 m	0%	3.01	1.7%
Ball 2	4.6 m	0%	3.23	1.5%
Ball 3	4.6 m	0%	3.37	1.4%
Ball 4	4.7 m	0%	3.10	1.6%
Ball 5	4.6 m	0%	3.07	1.6%
Ball 6	4.6 m	0%	2.79	1.5%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 72% of right-arm spin); releases about 80 cm from the middle stump.

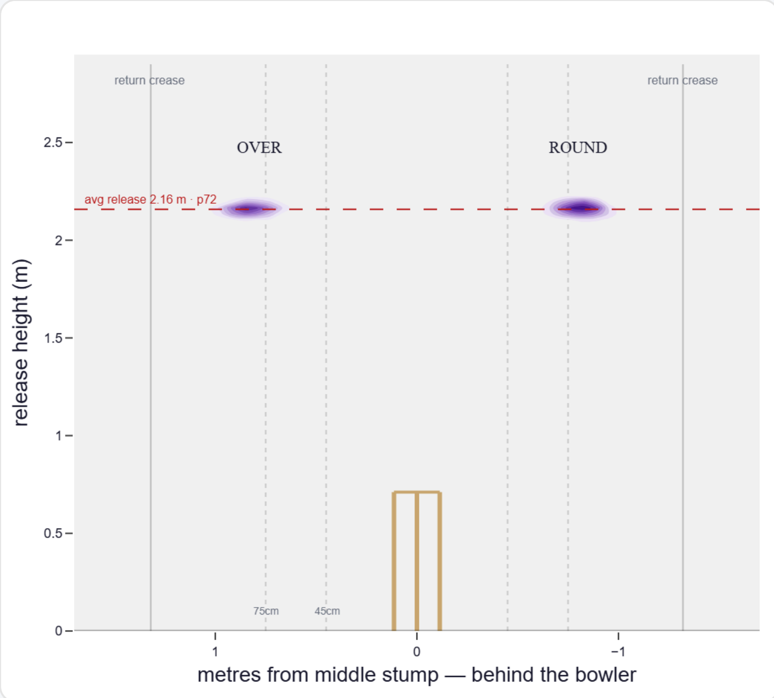
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	23%	3,689	2.99	67	27.4	55
Wide (>75cm)	77%	12,284	2.83	193	30.1	64

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	49%	0%	21%	79%
Round the wicket	51%	0%	25%	74%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs right-handers)

A big turner of the ball; skids it on with lower bounce; gets sharp drift in the air.

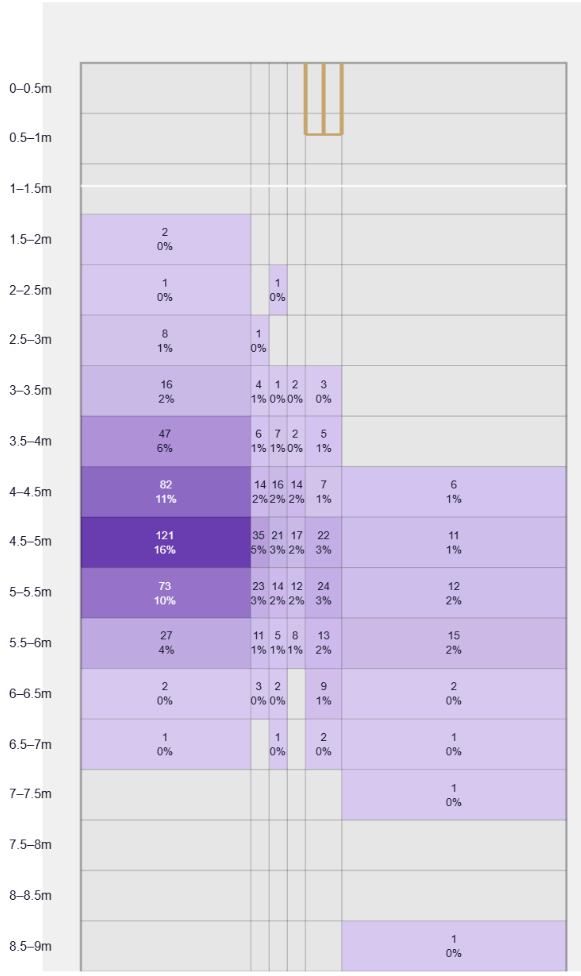
Generates above avg turn and above avg drift for a spin bowler; turns it in more to right-hand batters (97%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Drift	1.79°	66th pct (above avg)	93% away / 7% in
Turn	4.23°	74th pct (above avg)	2% away / 98% in
Bounce	4.0°	21st pct (below avg)	—

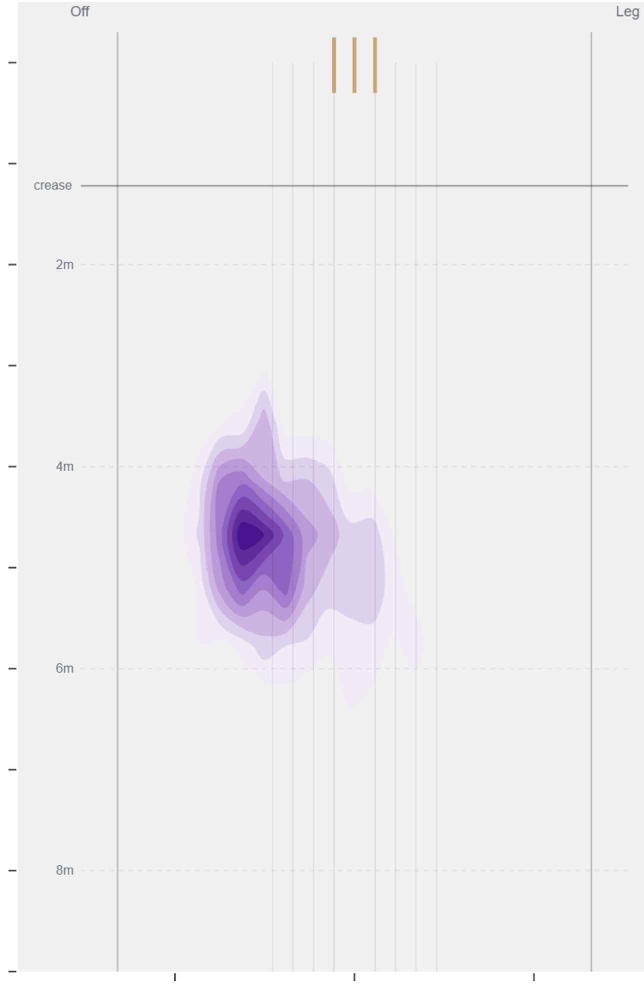
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / Wide of 6th** (37% of play-and-misses). Overall he beats the bat 6.8% of tracked balls (false-shot 19.8%, n=10,759).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
