Scouting Summary

COMMON THEMES

- Off Spin, averaging 84.3 kph (up to 91.7).
- Typical length is **4-5m** (their good length); median 4.5 m.
- Stock ball is **full on the stumps, turning away, drifting in, hitting the stumps** (21% of deliveries).
- Goes round the wicket 95% of the time against left-handers.
- Turns it 3.2° on average; 10% of balls turn ≥5°.
- Across an over he **repeats his length ball after ball**.

BIGGEST THREATS

- Most dangerous length is **Good Length** (26 wkts, 1.8% adjusted strike).
- Danger pitching line: **6th stump** (round the wicket).
- Takes 21% of wickets pitching **full in the 4th-stump channel**, round the wicket.
- Beats the bat 2.9% of tracked balls (false-shot 9.3%).
- Gets you **LBW** more than most — 34% of his wickets (1.7× the typical rate for this type).
- 32% of catches are behind the wicket (keeper / slips / gully); most often to keeper, long off: regulation, slip: 1st.
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (16% of runs).
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (34%) — his main scoring release.
- Cash in when he goes **good length outside off** (economy 3.8, beats the bat only 9%).

Solid line = career, ***dotted = last 3 years*** *(where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial).* ***Crease variation*** *= how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball.* ***Repeatability*** *= length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-06-25 → 2026-05-16)

He's around his career level lately (avg 35 last 5 vs 32 career).

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — full on the stumps, turning away, drifting in, hitting the stumps (21% of deliveries, economy 2.45). Minor variations: full outside off (19%) and full in the channel (19%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	turning away, drifting in	21%	2.45	14	10%
full outside off ▶	turning away, drifting in	19%	3.35	11	9%
full in the channel ▶	turning away, drifting in	19%	1.97	15	8%
a good length outside off ▶	turning away, drifting in	17%	3.82	12	9%
a good length in the channel ▶	turning away, drifting in	9%	2.67	7	9%
a good length on the stumps ▶	turning away, drifting in	5%	2.64	4	15%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 1,731 balls · 29 wkts · econ 2.94

Top ball type	%	Econ	Wkts
full on the stumps	21%	2.40	3
full in the channel	20%	1.20	8
full outside off	18%	3.28	4
a good length outside off	18%	4.19	6

*Most lethal: **good length Stumps** (2.8 wkts/100).*

Old ball (31+ ov) · 2,847 balls · 42 wkts · econ 3.02

Top ball type	%	Econ	Wkts
full on the stumps	21%	2.47	11
full outside off	20%	3.39	7
full in the channel	19%	2.51	7
a good length outside off	16%	3.55	6

*Most lethal: **good length 6th stump** (2.8 wkts/100).*

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) ▶ watch danger balls

WICKETS — WHERE MOST COME FROM
Full in the 4th-stump channel
21% of mapped wickets (14 of 68)

RUNS — WHERE MOST CONCEDED
Full on the stumps
16% of runs (326 of 1985)

DANGER LINE
6th stump
12 wkts / 489 balls · 2.3% adj (2.5% raw)

DANGER LENGTH
Good Length
26 wkts / 1,401 balls · 1.8% adj (1.9% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 6th stump
8 wkts / 250 balls · 2.8% adj (3.2% raw)

Most threatening pitching a good length on the 6th stump (26 wkts, 1.8% strike). Most wickets come from full in the 4th-stump channel, while he leaks the most runs full on the stumps.

*Zone shares are over his **mapped** wickets — 3 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Danger by ball age

NEW BALL (≤30 OV)

good length Stumps

most lethal cell · 2.8 wkts/100 · danger length good length · 29 wkts off 1,731 balls

OLD BALL (31+ OV)

good length 6th stump

most lethal cell · 2.8 wkts/100 · danger length good length · 42 wkts off 2,847 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	1,731	29	29.3	2.94	59.7	10%	4.76 m
Old ball (31+ ov)	2,847	42	34.2	3.02	67.8	9%	4.62 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	2,293	26	46.6	3.17	88.2	10%	4.68 m
Middle (4–7)	1,589	25	32.6	3.07	63.6	9%	4.63 m
Tail (8–11)	696	20	12.9	2.23	34.8	10%	4.69 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

50% of his runs come in boundaries — a boundary every 17 balls; most runs go to the leg side (34%); the drive hurts most (62 fours/sixes at 1.7 runs/ball).

BOUNDARY %
50%
runs in 4s/6s

ROTATED %

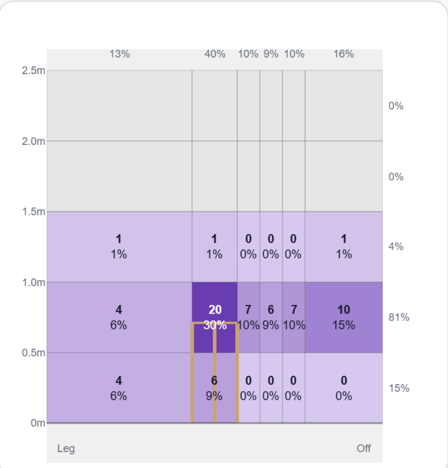
Work/Nudge	290	400	25%	20	1.38
Sweep	110	307	19%	51	2.79
Cut	93	176	11%	25	1.89
Slog	33	131	8%	26	3.97
Pull/Hook	20	63	4%	12	3.15

Direction from ball-tracking (all scoring shots); shot type recorded on 73% of scoring balls (899/1232) — groups with <5 balls omitted.

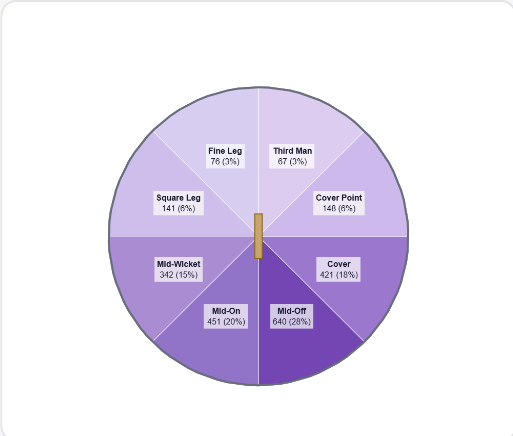
Pitch Maps & Scoring

At the Stumps (wickets)



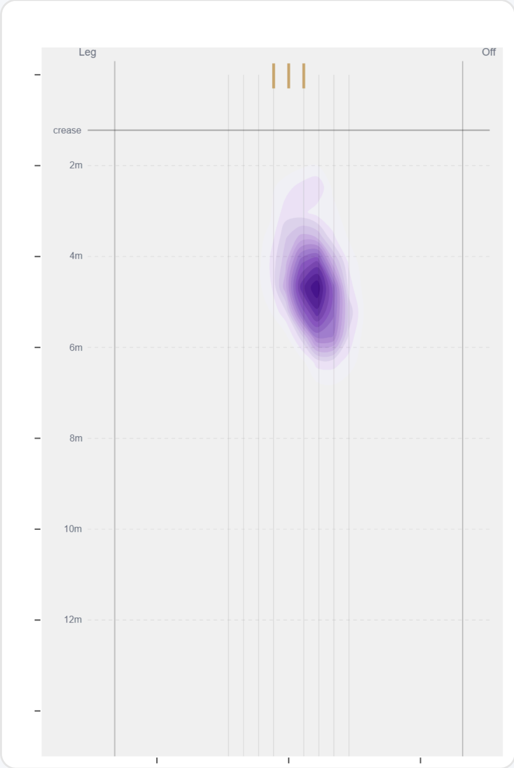
Wicket balls pass the stumps mostly at stumps — pitches around 4th stump and moves it back.

Where They're Scored Off



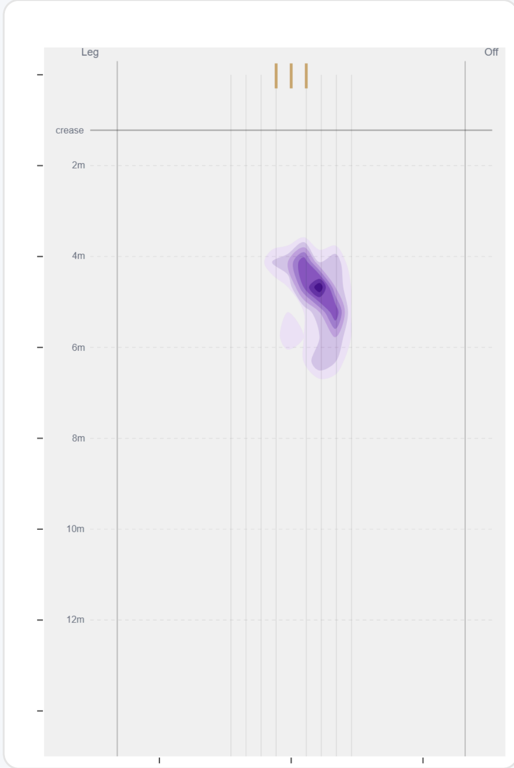
Runs come mostly on the off side (63%).

Where They Pitch It



Pitches it full on the stumps most often (19%); rarely drops short (0%).

Where Wickets Come From

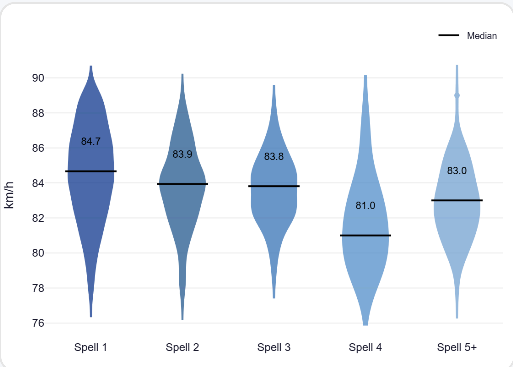


Wickets come mostly from balls pitched full in the 4th-stump channel, but strikes most often pitching on the 6th stump.

Speed & Spells

He drops ~1.8 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

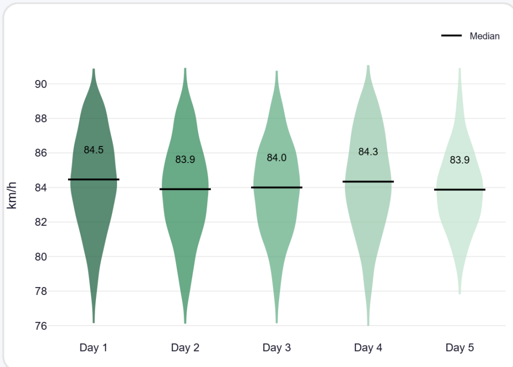


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



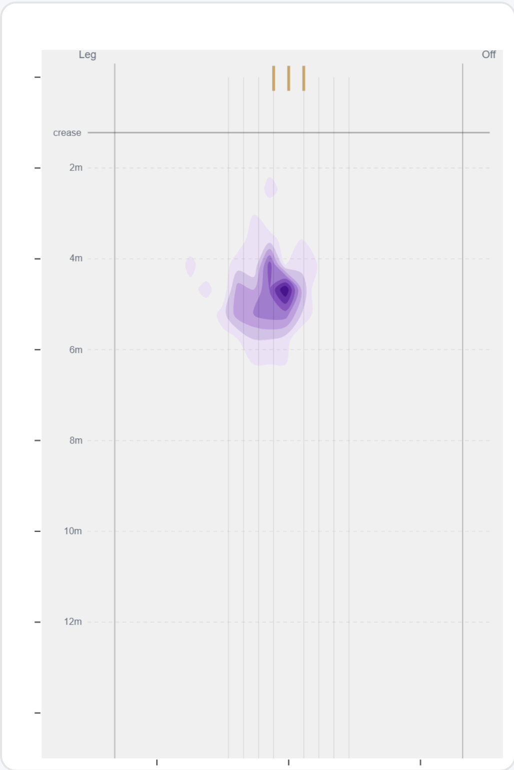
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively round the wicket to left-handers (95%, 4,350 balls); over the wicket is a rare change-up (5%, 228 balls).

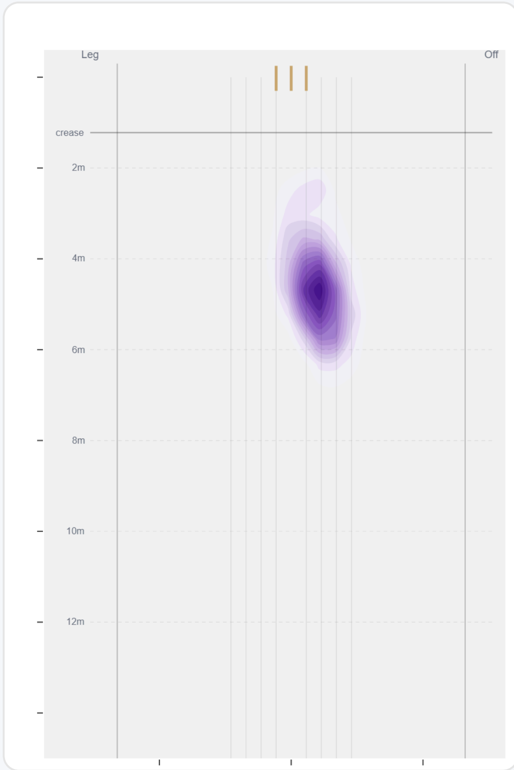
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	228 (5%)	Stumps	4.8 m	0%	3.18	3	36%
Round	4350 (95%)	Stumps	4.7 m	0%	2.98	68	50%

Over the Wicket



Where he pitches it from over the wicket (228 balls).

Round the Wicket



Where he pitches it from round the wicket (4350 balls).

Sequencing & Over Construction

Relentlessly consistent — repeats his length ball after ball (length spread ±1.0 m; more repeatable than 73% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Takes his wickets with the stock ball rather than obvious set-ups.

Across 138 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.6 m	0%	3.51	1.4%
Ball 2	4.7 m	0%	3.38	1.4%
Ball 3	4.6 m	0%	3.14	2.7%
Ball 4	4.7 m	0%	2.90	1.2%
Ball 5	4.7 m	0%	2.47	0.8%
Ball 6	4.7 m	0%	2.53	1.8%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 81% of right-arm spin); releases tight to the stumps (54 cm out, tighter than 80% of right-arm spin); varies his spot on the crease a lot (more than 76% of right-arm spin). Comes wider round the wicket (54 cm over vs 92 cm round).

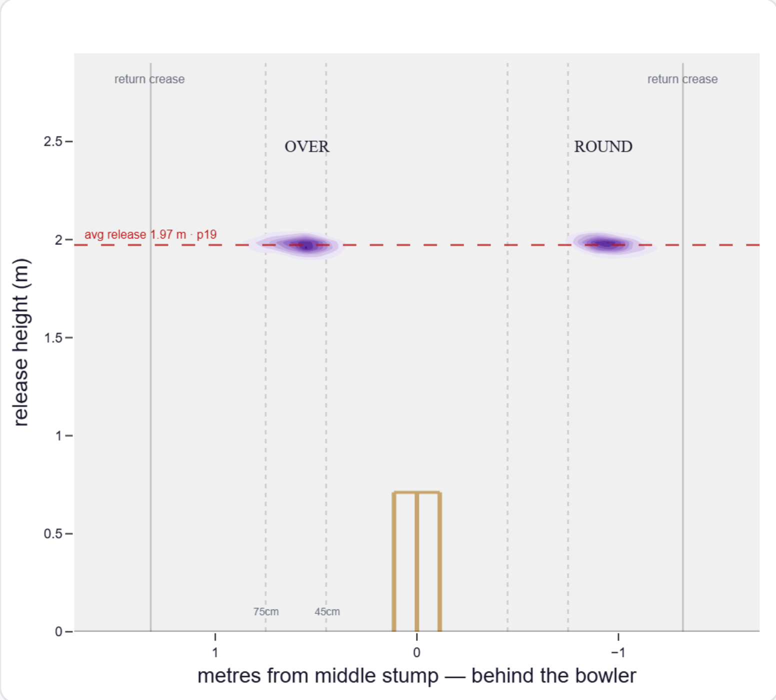
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	6%	666	2.98	7	47.3	95
Standard (45–75)	42%	4,476	3.01	75	29.9	60
Wide (>75cm)	51%	5,405	3.15	82	34.6	66

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	54%	12%	77%	12%
Round the wicket	46%	0%	3%	97%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

Not a big spinner — relies on flight, drift and accuracy.

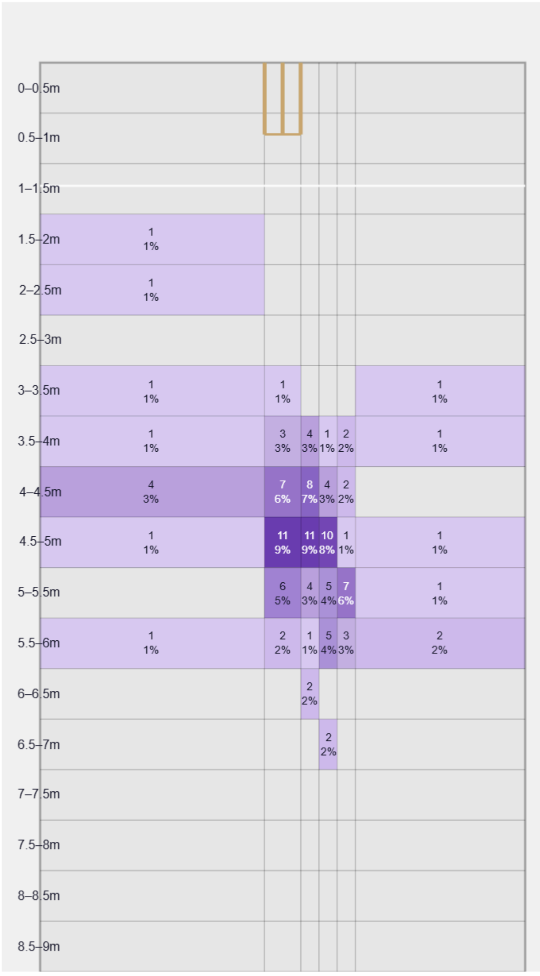
Generates below avg turn and about average drift for a spin bowler; turns it away more to left-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.63°	49th pct (about average)	1% away / 99% in
Turn	3.17°	29th pct (below avg)	100% away / 0% in
Bounce	4.4°	54th pct (about average)	—

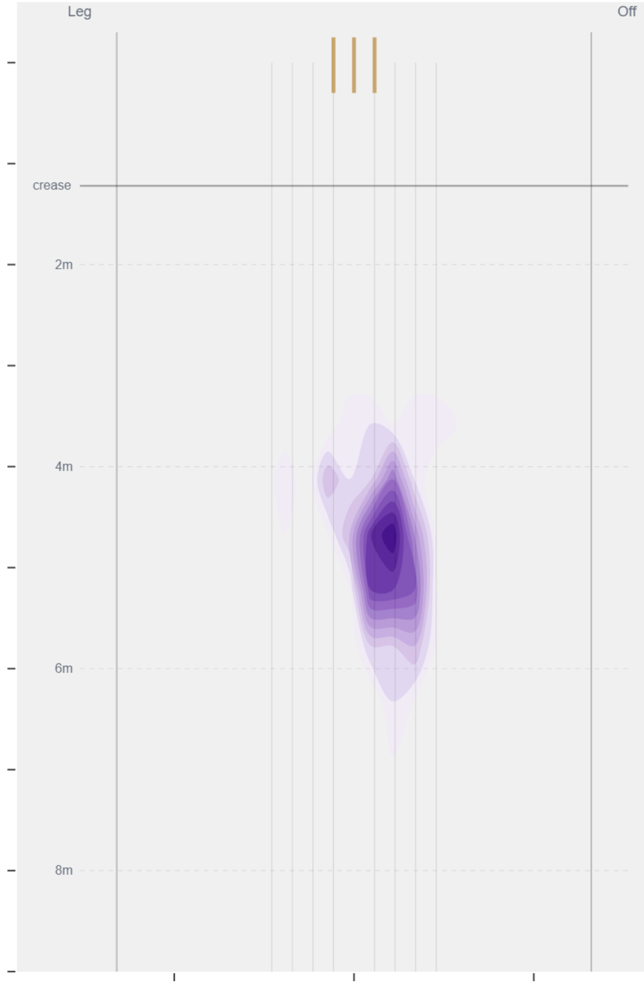
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / 4th stump** (19% of play-and-misses). Overall he beats the bat 2.9% of tracked balls (false-shot 9.3%, n=4,338).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
