Scouting Summary

COMMON THEMES

- Off Spin, averaging 86.6 kph (up to 91.7).
- Typical length is **4-5m** (their good length); median 3.4 m.
- Stock ball is **full on the stumps** (33% of deliveries).
- Goes round the wicket 100% of the time against left-handers.
- Turns it 4.3° on average; 34% of balls turn ≥5°.

BIGGEST THREATS

- Takes 100% of wickets pitching **a good length in the 4th-stump channel**.
- Beats the bat 5.5% of tracked balls (false-shot 24.8%).
- Most likely to dismiss you **caught** (50% of wickets).
- 100% of catches are behind the wicket (keeper / slips / gully); most often to slip: 1st.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the 5th stump** (20% of runs).
- Most of his runs leak through the leg side (47%) — his main scoring release.

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Threat Profile ▶ watch wickets

BEATEN %	FALSE-SHOT %	AVG TURN	AVG DRIFT
5.5% n=165	24.8% beaten + edges	4.3° 34% ≥5°	2.6° in-air

Catches to: Slip: 1st 1

Angle & variations: Round the wicket to LHB (100%), stays over to RHB

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
A good length in the 4th-stump channel
100% of mapped wickets (1 of 1)

RUNS — WHERE MOST CONCEDED
Full on the 5th stump
20% of runs (11 of 54)

Most wickets come from a good length in the 4th-stump channel, while he leaks the most runs full on the 5th stump.

*Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Scoring Profile (vs left-handers)

43% of his runs come in boundaries — a boundary every 18 balls; most runs go to the leg side (47%).

BOUNDARY %	ROTATED %	BALLS / BOUNDARY
43% runs in 4s/6s	**57%** runs in 1s & 2s	**18**

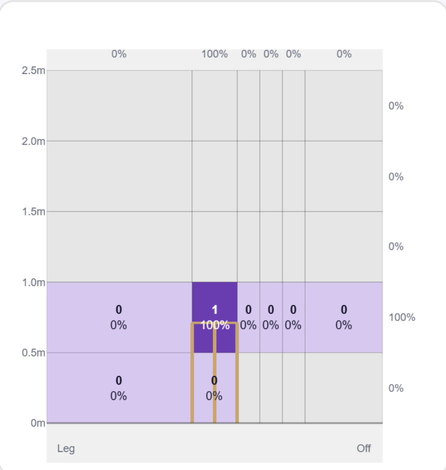
OFF SIDE %	LEG SIDE %	STRAIGHT %
37% of runs	**47%** of runs	**16%** down the ground

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	28	40	43%	3	1.43
Sweep	8	25	27%	4	3.12
Work/Nudge	10	17	18%	0	1.70

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (52/52) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

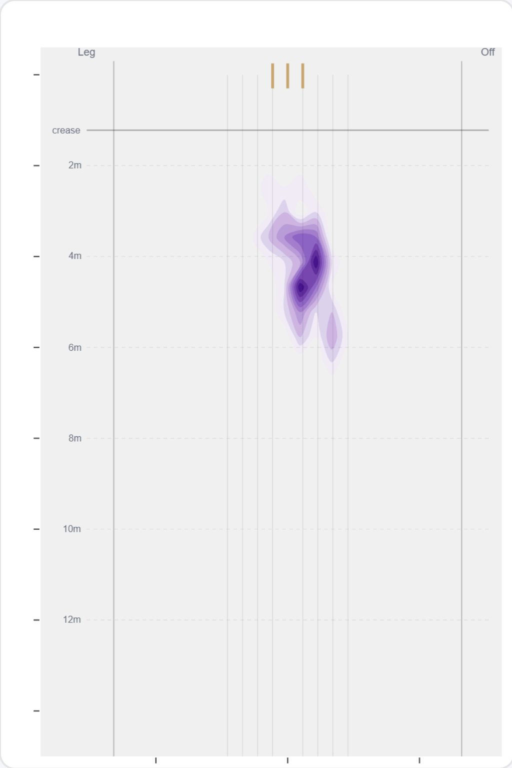


Wicket balls pass the stumps mostly at stumps.

Where They're Scored Off

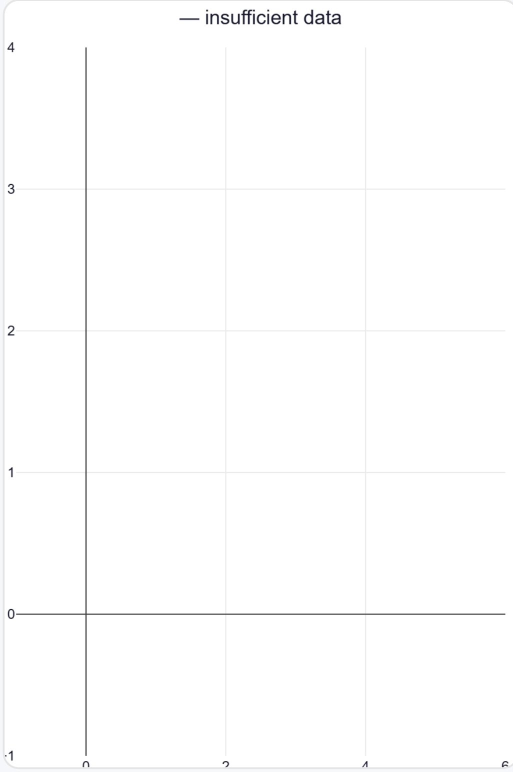
Runs come mostly on the leg side (60%).

Where They Pitch It



Pitches it full on the stumps most often (32%); rarely drops short (0%).

Where Wickets Come From

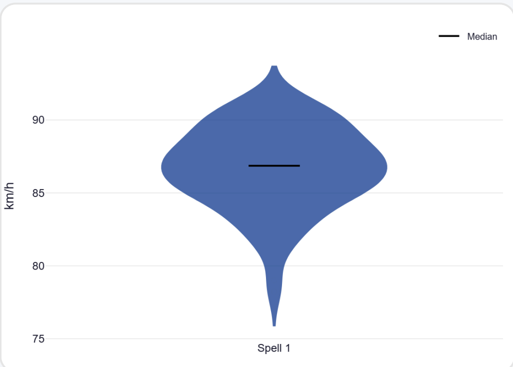


Wickets come mostly from balls pitched a good length in the 4th-stump channel.

Speed & Spells

He is a touch slower in the 2nd innings.

Speed by Spell

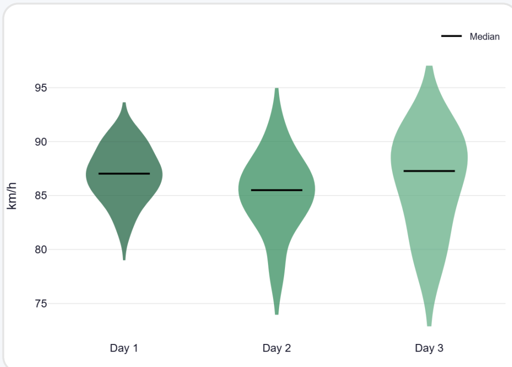


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



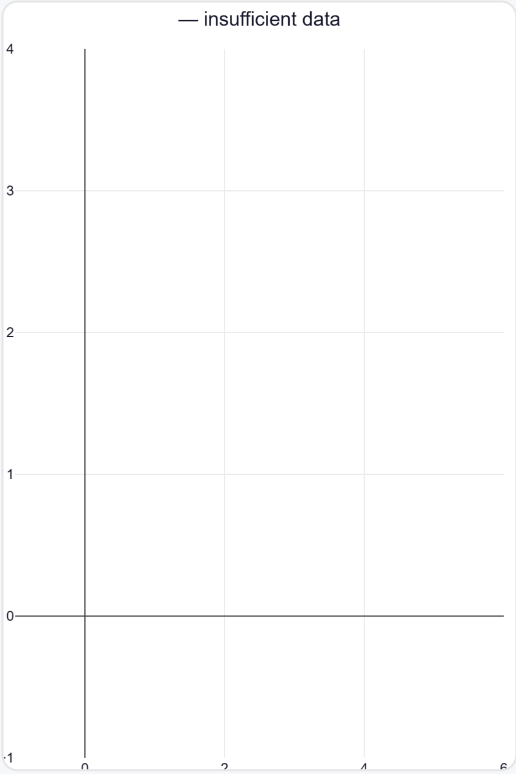
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Bowls exclusively round the wicket to left-handers (165 balls) — never goes over the wicket in this data.

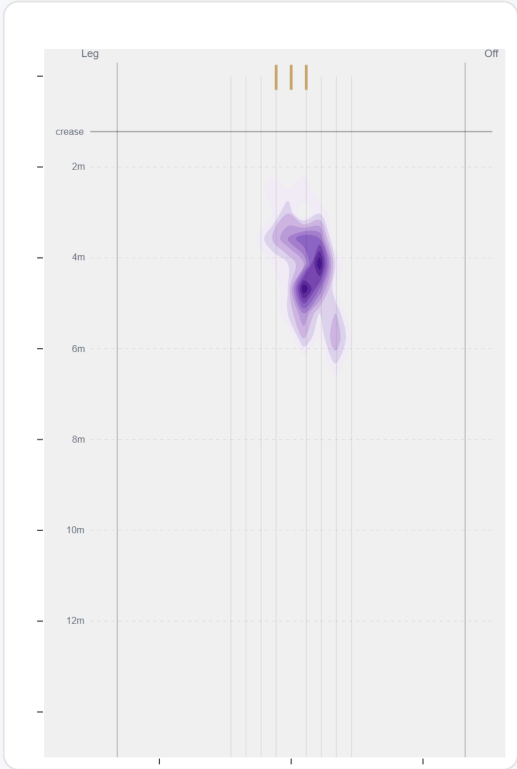
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	0 (0%)	—	—	—	—	0	—
Round	165 (100%)	Stumps	4.3 m	0%	3.42	2	43%

Over the Wicket



Over the wicket — only 0 balls to left-handers, too few to read into.

Round the Wicket



Where he pitches it from round the wicket (165 balls).

Sequencing & Over Construction

Release Point & Crease Use

A mid-height release point; releases wide of the stumps (92 cm out, wider than 82% of right-arm spin); varies his spot on the crease a lot (more than 93% of right-arm spin).

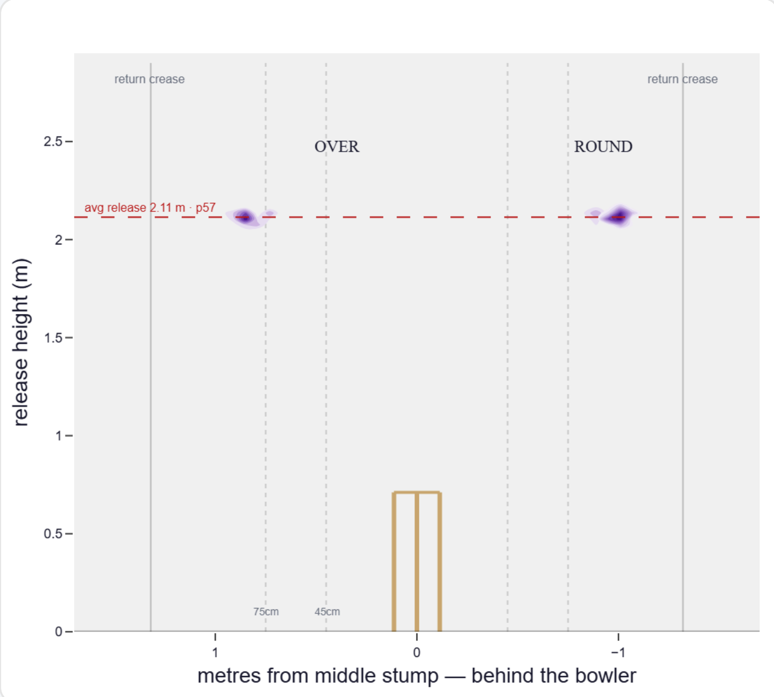
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Wide (>75cm)	92%	169	3.12	2	44.0	84

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	45%	0%	17%	83%
Round the wicket	55%	0%	1%	99%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A big turner of the ball; skids it on with lower bounce; gets sharp drift in the air.

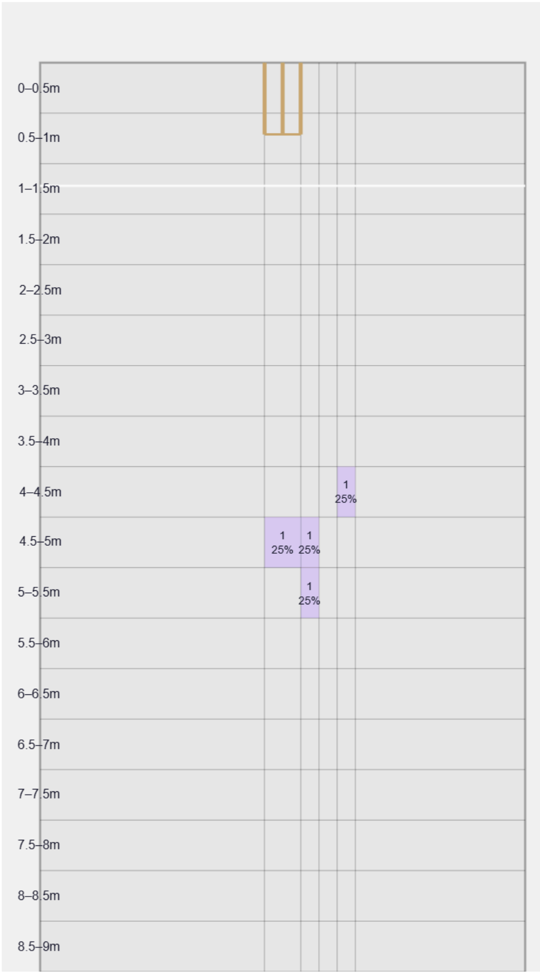
Generates well above avg turn and well above avg drift for a spin bowler; turns it away more to left-hand batters (100%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	2.46°	96th pct (well above avg)	0% away / 100% in
Turn	4.41°	80th pct (well above avg)	100% away / 0% in
Bounce	3.7°	5th pct (well below avg)	—

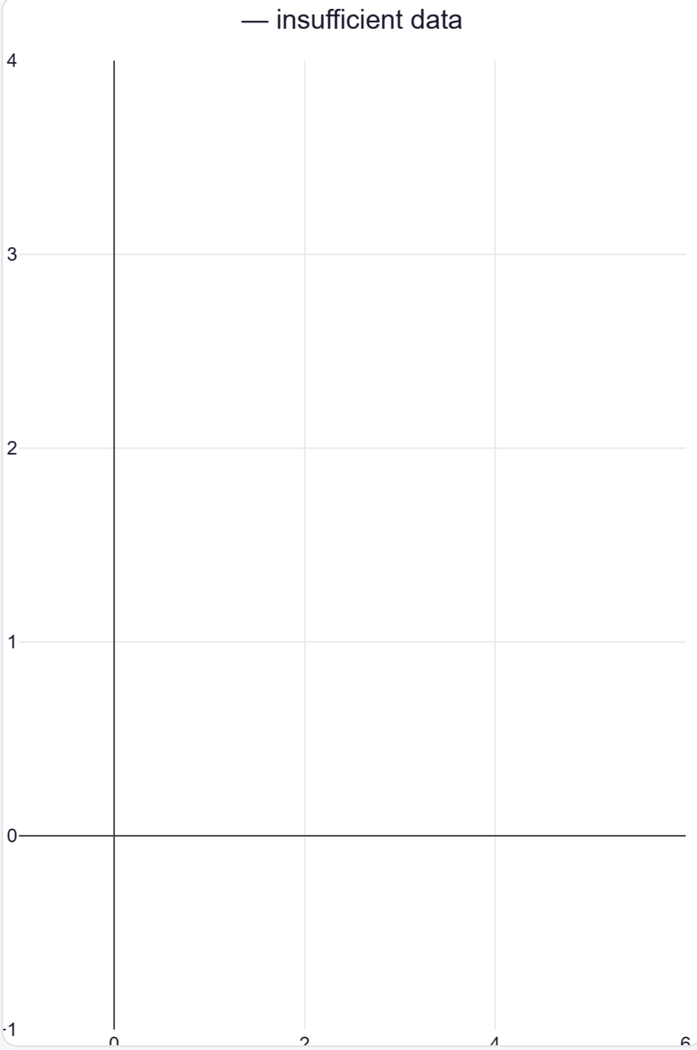
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / 6th stump** (25% of play-and-misses). Overall he beats the bat 5.5% of tracked balls (false-shot 24.8%, n=165).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
