Scouting Summary

COMMON THEMES

- Right Fast, averaging 141.1 kph (up to 148.7).
- Typical length is **8-9m** (their good length); median 7.7 m.
- Stock ball is **back of a length down the leg side, seaming back, swinging away, climbing over off** (15% of deliveries).
- Goes round the wicket 43% of the time against left-handers.
- **Round the wicket** he shifts his pitching line from down leg to wide of 6th.
- Across an over he **varies his length a lot**, starting shorter then pitching up through the over.

BIGGEST THREATS

- Most dangerous length is **Yorker/Full** (3 wkts, 2.7% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 13% of wickets pitching **back of a length down the leg side**.
- Beats the bat 7.0% of tracked balls (false-shot 19.0%).
- Gets you **caught behind** more than most — 88% of his wickets (1.3× the typical rate for this type).
- 79% of catches are behind the wicket (keeper / slips / gully); most often to keeper, square leg: short leg, slip: 1st.

AREAS TO EXPLOIT

- Concedes most runs pitching **back of a length down the leg side** (17% of runs).
- Short ball: 45% of deliveries, economy 4.2 — 7 wkts from 308 short balls.
- Away from yorker/full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (41%) — his main scoring release.
- Cash in when he goes **back of a length down the leg side** (economy 4.8, beats the bat only 17%).

*Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-06-17 → 2026-05-16)

He's around his career level lately (avg 37 last 5 vs 35 career).

How he gets you out	His %	Base	Index
Caught	88%	68%	1.29×

*Share of his 16 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Keeper 9 · Square leg: short leg 2 · Slip: 1st 1 · Midwicket: short 1 · Gully 1

Angle & variations: Round the wicket to LHB (42%), stays over to RHB · slower balls 2.6% (~126 kph)

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — back of a length down the leg side, seaming back, swinging away, climbing over off (15% of deliveries, economy 4.79). Minor variations: a good length down the leg side (12%) and a good length outside off (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
back of a length down the leg side ▶	seaming back, swinging away	15%	4.79	2	17%
a good length down the leg side ▶	swinging away, seaming back	12%	2.89	1	14%
a good length outside off ▶	swinging away	11%	1.89	1	20%
a good length wide outside off ▶	swinging away	9%	1.73	2	29%
a good length on the stumps ▶	swinging away, seaming both ways	8%	2.46	1	20%
full on the stumps ▶	swinging away, seaming back	8%	8.59	1	22%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 359 balls · 6 wkts · econ 4.16

Top ball type	%	Econ	Wkts
back of a length down the leg side	15%	5.09	1
a good length down the leg side	13%	3.19	0
a good length outside off	12%	1.36	0
a good length wide outside off	11%	0.73	2

Old ball (31+ ov) · 327 balls · 10 wkts · econ 4.94

Top ball type	%	Econ	Wkts
back of a length down the leg side	16%	4.47	1
a good length down the leg side	11%	2.50	1
a good length outside off	10%	2.62	1
full down the leg side	8%	9.23	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
Back of a length down the leg side
13% of mapped wickets (2 of 15)

RUNS — WHERE MOST CONCEDED
Back of a length down the leg side
17% of runs (96 of 556)

DANGER LINE
Wide of 6th
4 wkts / 132 balls · 2.7% adj (3.0% raw) · low sample

DANGER LENGTH
Yorker/Full
3 wkts / 95 balls · 2.7% adj (3.2% raw) · low sample

Most threatening pitching full wide outside off (3 wkts, 2.7% strike). Most wickets come from back of a length down the leg side, while he leaks the most runs back of a length down the leg side.

*Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	359	6	41.5	4.16	59.8	16%	7.67 m
Old ball (31+ ov)	327	10	26.9	4.94	32.7	22%	7.80 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	322	4	51.5	3.84	80.5	19%	7.82 m
Middle (4–7)	226	9	21.4	5.12	25.1	17%	7.58 m
Tail (8–11)	138	3	39.7	5.17	46.0	22%	7.75 m

Bangs it in more with the old ball (6%→22% short); more short balls at the tail (23% vs 17% to the top 3); more yorkers/full at the tail (28%).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

58% of his runs come in boundaries — a boundary every 10 balls; most runs go to the leg side (41%); the drive hurts most (30 fours/sixes at 2.8 runs/ball).

BOUNDARY %
58%
runs in 4s/6s

ROTATED %

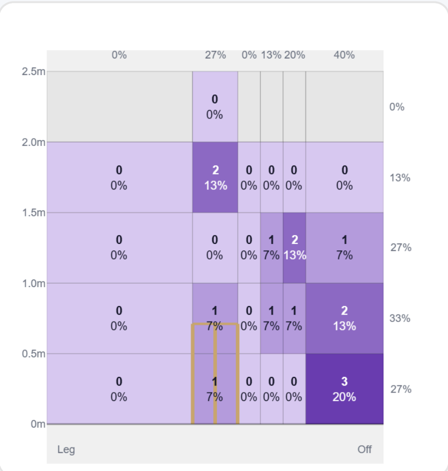
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	97	164	34%	14	1.69
Drive	58	160	33%	30	2.76
Pull/Hook	46	114	23%	17	2.48
Cut	14	32	7%	5	2.29
Slog	5	10	2%	1	2.00

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (239/239) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

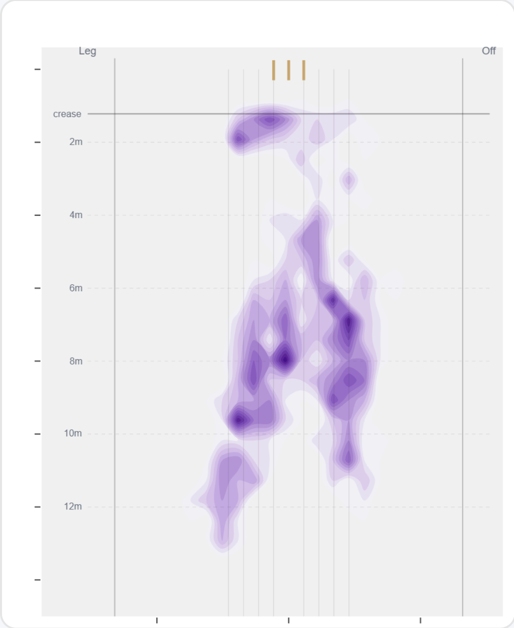


Wicket balls pass the stumps mostly at wide of 6th.

Where They're Scored Off

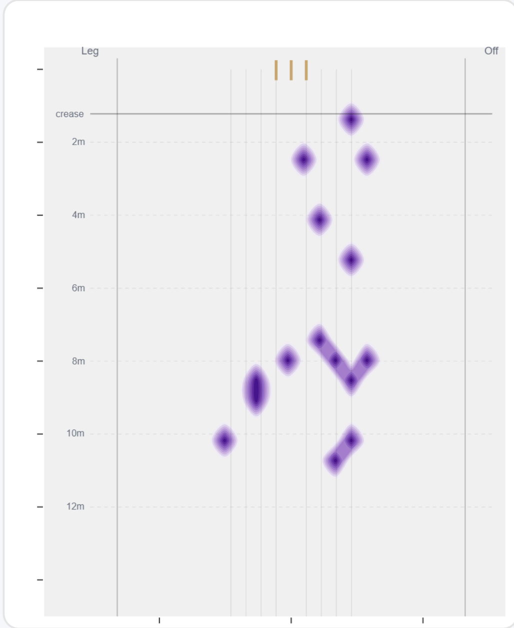
Runs come mostly on the off side (53%).

Where They Pitch It



Pitches it back of a length down the leg side most often (15%); drops short often (44%).

Where Wickets Come From

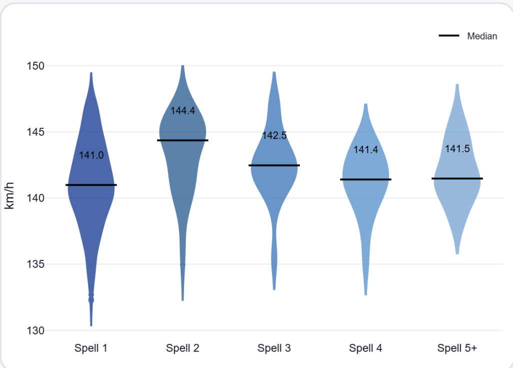


Wickets come mostly from balls pitched back of a length down the leg side, but strikes most often pitching wide outside off.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

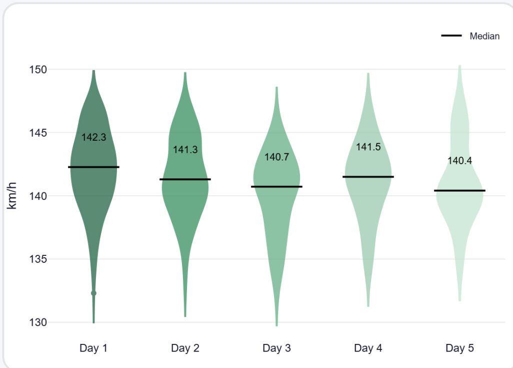


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



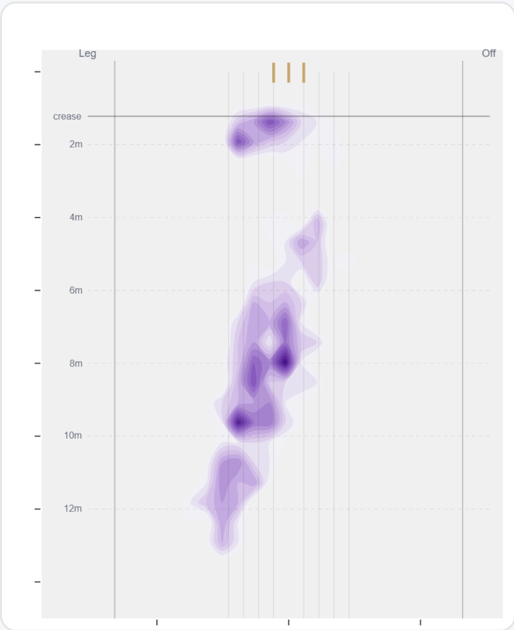
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to wide of 6th — economy 4.90→4.03, a wicket every 66→29 balls (over→round).

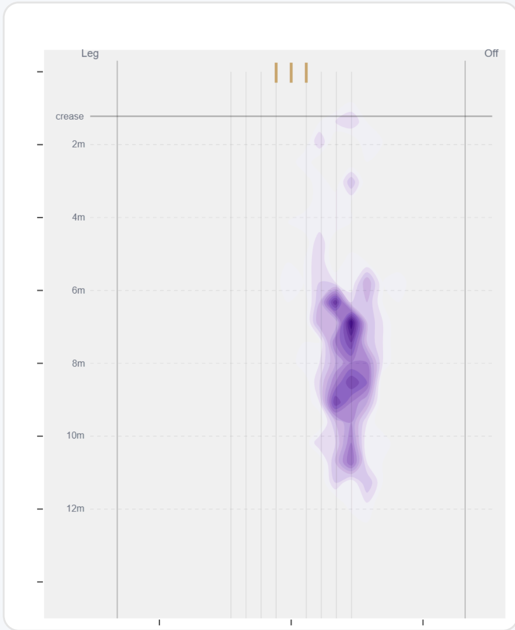
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	394 (57%)	Down leg	7.8 m	20%	4.90	6	60%
Round	292 (43%)	Wide of 6th	7.6 m	16%	4.03	10	56%

Over the Wicket



Where he pitches it from over the wicket (394 balls).

Round the Wicket



Where he pitches it from round the wicket (292 balls).

Sequencing & Over Construction

Variable with his length (length spread ±3.0 m; more repeatable than 8% of pace bowlers); drops shorter early, then pitches up later in the over; and holds the same crease position through the over.

Across 34 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	8.2 m	19%	4.66	0.0%
Ball 2	8.0 m	21%	4.56	3.8%
Ball 3	7.3 m	15%	4.54	3.6%
Ball 4	7.4 m	21%	4.82	3.7%
Ball 5	8.0 m	20%	5.17	1.7%
Ball 6	7.1 m	13%	3.69	0.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 67 cm from the middle stump; varies his spot on the crease a lot (more than 99% of right-arm pace).

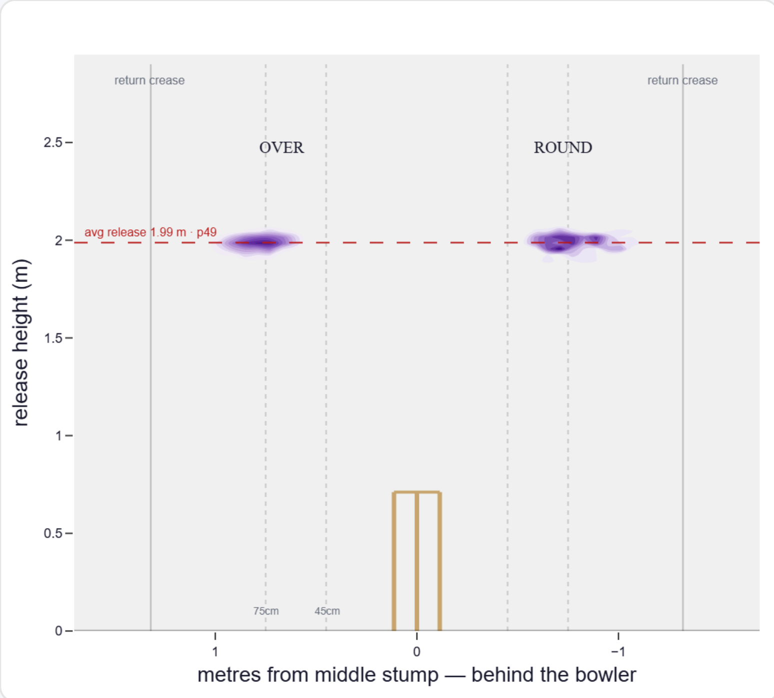
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	40%	726	4.48	16	33.9	45
Wide (>75cm)	60%	1,086	4.30	21	37.1	52

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	83%	0%	39%	61%
Round the wicket	17%	0%	46%	53%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce.

Generates well below avg seam and below avg swing for a pace bowler; seams it in more to left-hand batters (55%).

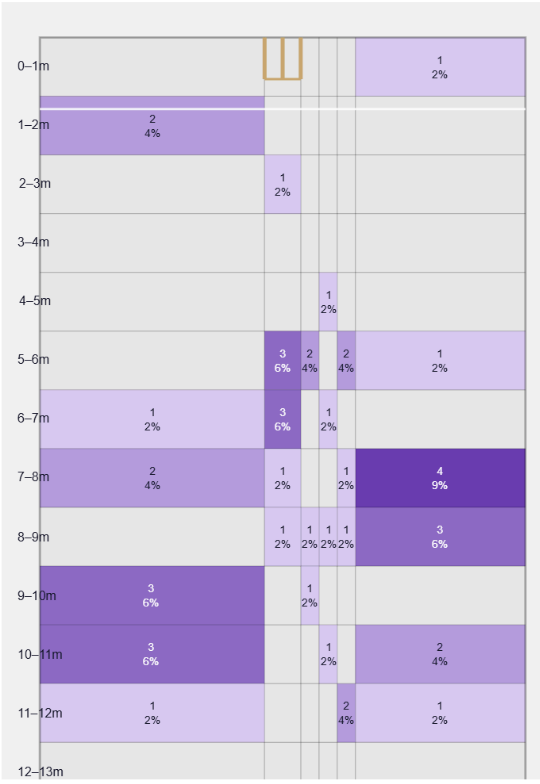
Swing by ball age to left-hand batters: new ball (≤25 ov, n=175) 87% away / 13% in; old ball (≥40 ov, n=135) 85% away / 15% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.63°	20th pct (below avg)	87% away / 13% in
Seam	0.43°	5th pct (well below avg)	45% away / 55% in
Bounce	4.5°	90th pct (well above avg)	—

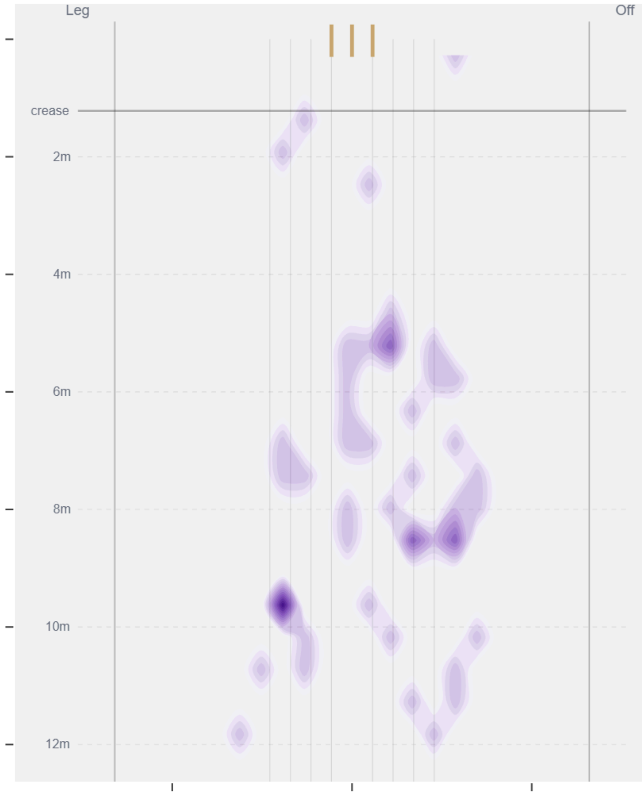
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Back of Length / Down leg** (15% of play-and-misses). Overall he beats the bat 7.0% of tracked balls (false-shot 19.0%, n=686).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
