Scouting Summary

COMMON THEMES

- Right Fast, averaging 141.9 kph (up to 149.6).
- Typical length is **8-9m** (their good length); median 8.0 m.
- Stock ball is **a good length wide outside off, swinging in, seaming both ways, passing outside off** (26% of deliveries).
- Goes round the wicket 2% of the time against right-handers.
- Across an over he **varies his length a lot**.

BIGGEST THREATS

- Most dangerous length is **Yorker/Full** (4 wkts, 3.2% adjusted strike).
- Danger pitching line: **6th stump**.
- Takes 43% of wickets pitching **a good length wide outside off**, over the wicket.
- Beats the bat 7.1% of tracked balls (false-shot 20.1%).
- Gets you **caught behind** more than most — 82% of his wickets (1.3× the typical rate for this type).
- 67% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 1st, square leg: deep backward.

AREAS TO EXPLOIT

- Concedes most runs pitching **back of a length wide outside off** (26% of runs).
- Short ball: 50% of deliveries, economy 4.2 — 6 wkts from 569 short balls.
- Away from yorker/full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (54%) — his main scoring release.
- Cash in when he goes **back of a length wide outside off** (economy 5.9, beats the bat only 18%).

***Solid line = career**, **dotted = last 3 years** (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-06-17 → 2026-05-16)

He's around his career level lately (avg 37 last 5 vs 35 career).

How he gets you out	His %	Base	Index
Caught	82%	65%	1.26×
Bowled	14%	19%	0.71×

*Share of his 22 wickets by type, indexed against the base rate vs the average pace bowler to RHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Keeper 6 · Slip: 1st 4 · Square leg: deep backward 1 · Mid off: regulation 1 · Slip: 3rd 1 · Slip: 2nd 1

Angle & variations: Round the wicket to LHB (42%), stays over to RHB · slower balls 2.8% (~124 kph)

Stock Ball & Ball Types (vs right-handers) ▶ watch stock balls

Stock ball — a good length wide outside off, swinging in, seaming both ways, passing outside off (26% of deliveries, economy 3.08). Minor variations: back of a length wide outside off (19%) and a good length outside off (19%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	swinging in, seaming both ways	26%	3.08	9	25%
back of a length wide outside off ▶	swinging in, seaming away	19%	5.89	1	18%
a good length outside off ▶	swinging in, seaming away	19%	2.31	1	18%
full outside off ▶	swinging in	9%	4.19	4	10%
full wide outside off ▶	swinging in	7%	6.66	2	15%
back of a length outside off ▶	swinging in, seaming both ways	7%	3.15	2	21%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 433 balls · 8 wkts · econ 4.36

Top ball type	%	Econ	Wkts
a good length wide outside off	31%	3.13	4
a good length outside off	21%	2.28	1
back of a length wide outside off	15%	6.73	0
full outside off	11%	4.53	2

*Most lethal: **good length Wide of 6th** (2.5 wkts/100).*

Old ball (31+ ov) · 714 balls · 14 wkts · econ 4.24

Top ball type	%	Econ	Wkts
a good length wide outside off	22%	3.04	5
back of a length wide outside off	21%	5.50	1
a good length outside off	17%	2.34	0
back of a length outside off	9%	3.25	2

*Most lethal: **good length Wide of 6th** (2.8 wkts/100).*

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) ▶ watch danger balls

WICKETS — WHERE MOST COME FROM
A good length wide outside off
43% of mapped wickets (9 of 21)

RUNS — WHERE MOST CONCEDED
Back of a length wide outside off
26% of runs (212 of 807)

DANGER LINE
6th stump
6 wkts / 253 balls · 2.3% adj (2.4% raw)

DANGER LENGTH
Yorker/Full
4 wkts / 91 balls · 3.2% adj (4.4% raw) · low sample

MOST LETHAL ZONE (BY RATE)
Yorker/Full / 6th stump
3 wkts / 30 balls · 4.1% adj (10.0% raw) · low sample

Most threatening pitching full on the 6th stump (4 wkts, 3.2% strike). Most wickets come from a good length wide outside off, while he leaks the most runs back of a length wide outside off.

*Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Danger by ball age

NEW BALL (≤30 OV)

good length Wide of 6th

most lethal cell · 2.5 wkts/100 · danger length good length · 8 wkts off 433 balls

OLD BALL (31+ OV)

good length Wide of 6th

most lethal cell · 2.8 wkts/100 · danger length good length · 14 wkts off 714 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	433	8	39.4	4.36	54.1	18%	7.73 m
Old ball (31+ ov)	714	14	36.0	4.24	51.0	21%	8.24 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	484	7	44.7	3.88	69.1	18%	8.08 m
Middle (4–7)	474	9	41.0	4.67	52.7	17%	7.92 m
Tail (8–11)	189	6	22.8	4.35	31.5	32%	8.23 m

Bangs it in more with the old ball (8%→19% short); more short balls at the tail (21% vs 16% to the top 3); more yorkers/full at the tail (14%).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

57% of his runs come in boundaries — a boundary every 10 balls; most runs go to the off side (54%); the drive hurts most (46 fours/sixes at 2.4 runs/ball).

BOUNDARY %
57%
runs in 4s/6s

ROTATED %

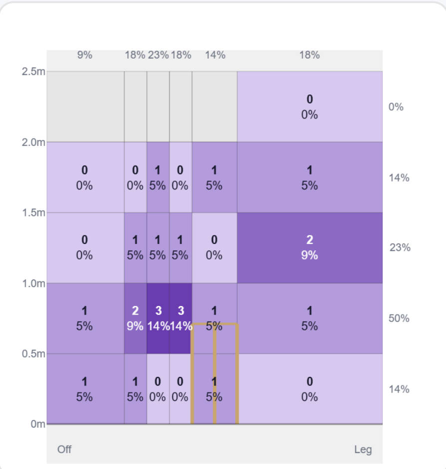
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	124	298	37%	46	2.40
Work/Nudge	169	292	36%	29	1.73
Pull/Hook	42	98	12%	15	2.33
Cut	36	93	12%	18	2.58

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (387/387) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

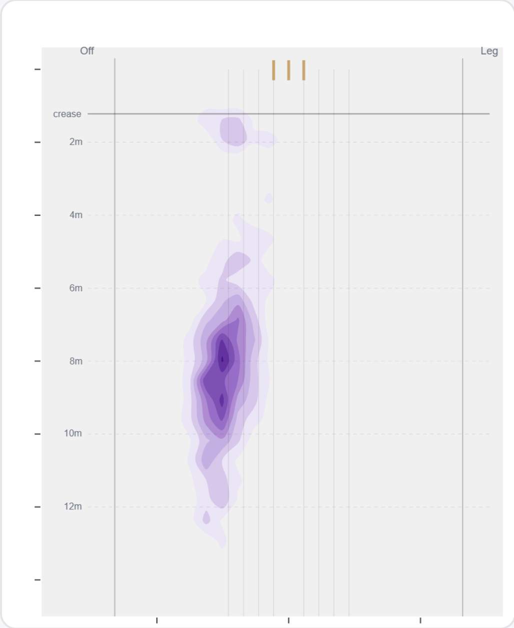


Wicket balls pass the stumps mostly at 5th stump — pitches around wide of 6th and moves it back.

Where They're Scored Off

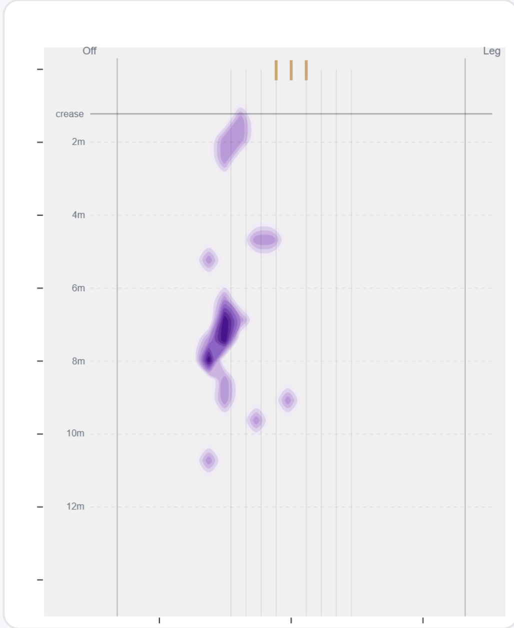
Runs come mostly on the off side (57%).

Where They Pitch It



Pitches it a good length wide outside off most often (25%); drops short often (49%).

Where Wickets Come From

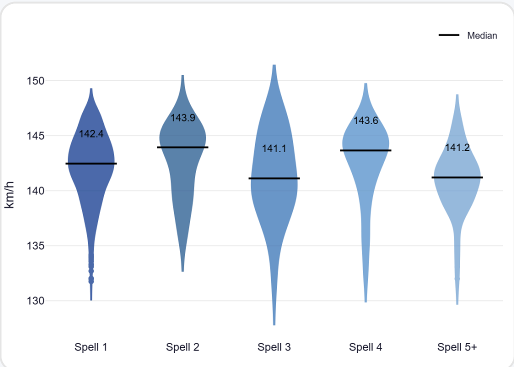


Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 6th stump.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

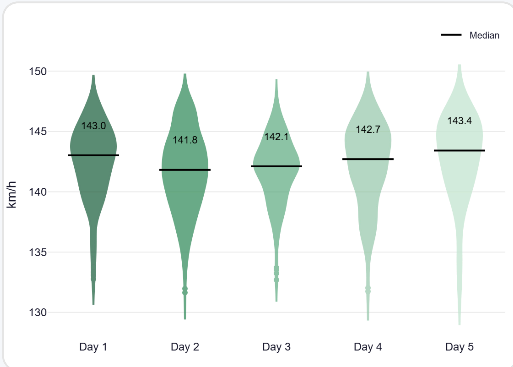


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



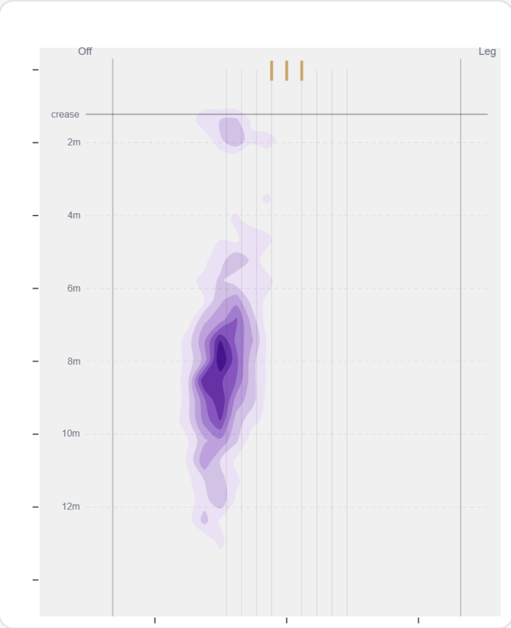
By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (98%, 1,126 balls); the round the wicket sample (21 balls) is too small to read into.

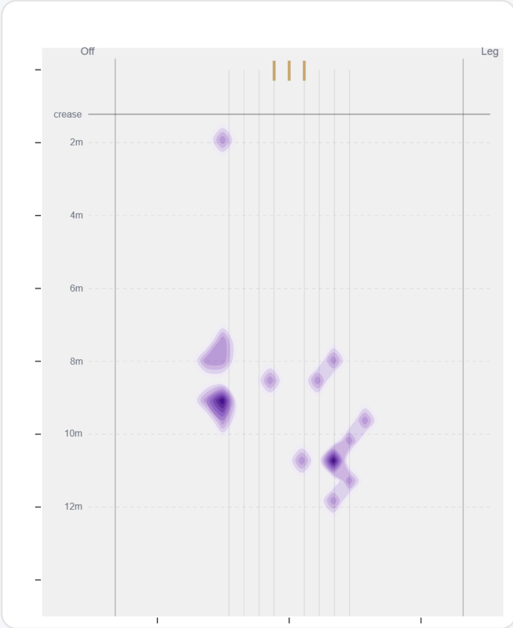
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	1126 (98%)	Wide of 6th	8.0 m	16%	4.24	22	56%
Round	21 (2%)	Down leg	—	—	6.57	0	78%

Over the Wicket



Where he pitches it from over the wicket (1126 balls).

Round the Wicket



Round the wicket — only 21 balls to right-handers, too few to read into.

Sequencing & Over Construction

Variable with his length (length spread ±2.7 m; more repeatable than 8% of pace bowlers); with no consistent trend to his length across the over; and holds the same crease position through the over.

Across 34 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	8.0 m	15%	4.27	1.1%
Ball 2	8.3 m	17%	4.61	1.0%
Ball 3	8.1 m	15%	4.37	3.2%
Ball 4	7.9 m	16%	3.33	3.7%
Ball 5	8.1 m	16%	4.35	0.0%
Ball 6	7.8 m	14%	5.03	2.2%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 67 cm from the middle stump; varies his spot on the crease a lot (more than 99% of right-arm pace).

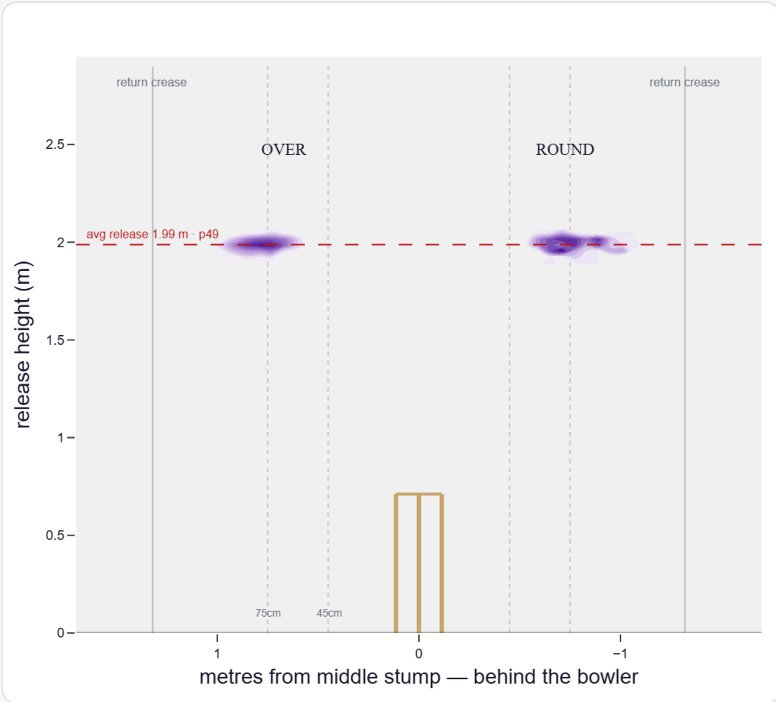
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	40%	726	4.48	16	33.9	45
Wide (>75cm)	60%	1,086	4.30	21	37.1	52

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	83%	0%	39%	61%
Round the wicket	17%	0%	46%	53%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce.

Generates well below avg seam and below avg swing for a pace bowler; seams it away more to right-hand batters (61%).

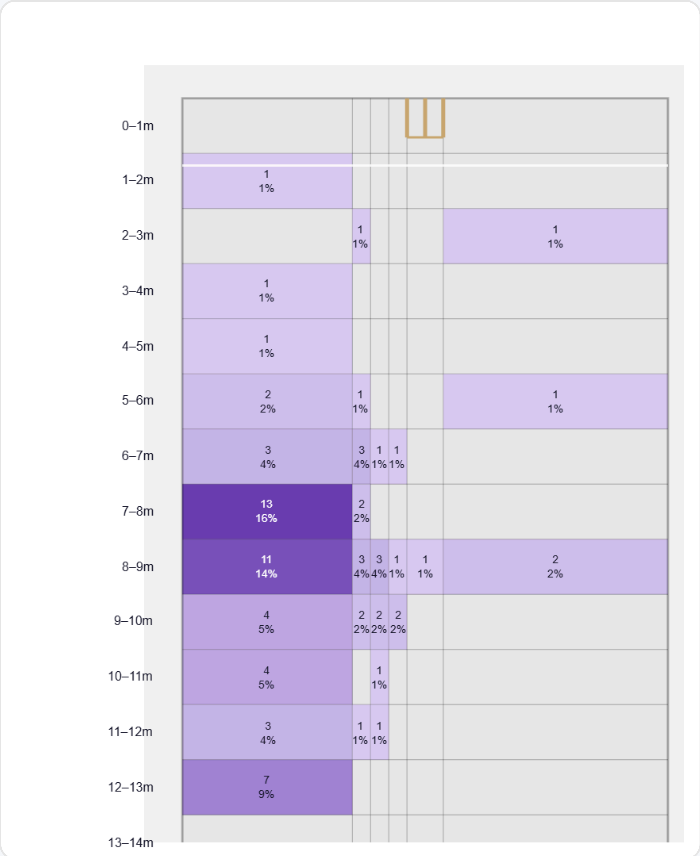
Swing by ball age to right-hand batters: new ball (≤25 ov, n=233) 26% away / 74% in; old ball (≥40 ov, n=317) 17% away / 83% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.63°	20th pct (below avg)	20% away / 80% in
Seam	0.43°	5th pct (well below avg)	62% away / 38% in
Bounce	4.5°	90th pct (well above avg)	—

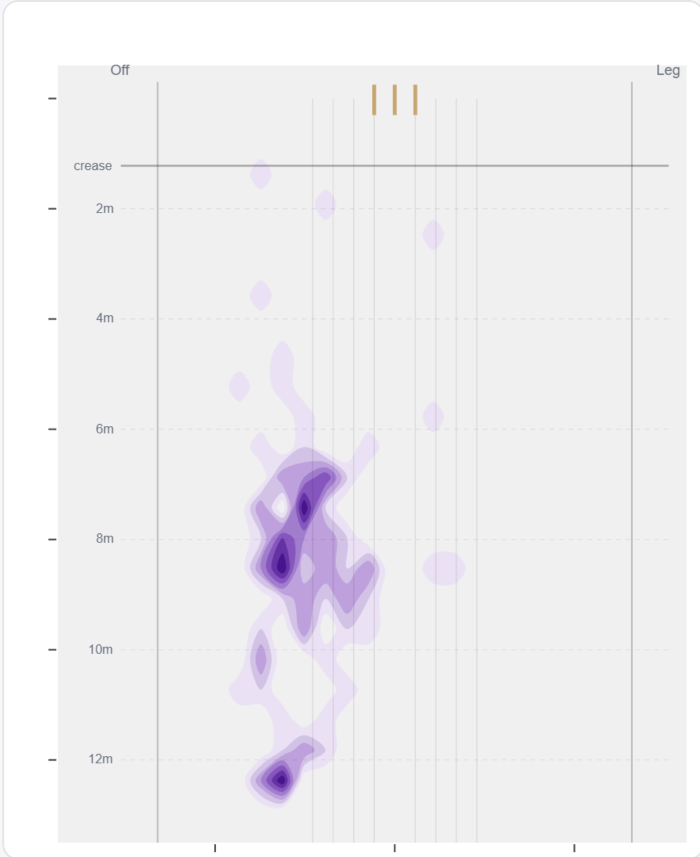
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (34% of play-and-misses). Overall he beats the bat 7.1% of tracked balls (false-shot 20.1%, n=1,147).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
