Scouting Summary

COMMON THEMES

- Off Spin, averaging 86.8 kph (up to 94.6).
- Typical length is **4-5m** (their good length); median 4.7 m.
- Stock ball is **full on the stumps, turning away, drifting in, hitting the stumps** (18% of deliveries).
- Goes round the wicket 96% of the time against left-handers.
- Turns it 3.2° on average; 11% of balls turn ≥5°.

BIGGEST THREATS

- Takes 50% of wickets pitching **a good length wide outside off**.
- Beats the bat 2.9% of tracked balls (false-shot 12.5%).
- Most likely to dismiss you **caught** (100% of wickets).
- 50% of catches are behind the wicket (keeper / slips / gully); most often to cover: regulation, slip: 1st.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (14% of runs).
- Most of his runs leak through the leg side (51%) — his main scoring release.
- Cash in when he goes **good length wide outside off** (economy 4.6, beats the bat only 8%).

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-06-11 → 2025-11-22)

He's striking more often right now (avg 20 in his last 5 Tests vs 52 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	100%	59%	1.70×

*Share of his 2 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Cover: regulation 1 Slip: 1st 1

Angle & variations: Mostly over the wicket (round LHB 95% · RHB 23%)

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — full on the stumps, turning away, drifting in, hitting the stumps (18% of deliveries, economy 2.11). Minor variations: full outside off (17%) and a good length outside off (15%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	turning away, drifting in	18%	2.11	0	12%
full outside off ▶	turning away, drifting in	17%	1.59	0	6%
a good length outside off ▶	turning away, drifting in	15%	3.77	0	12%
full in the channel ▶	turning away, drifting in	12%	2.12	0	9%
full down the leg side ▶	turning away, drifting in	11%	3.38	0	16%
a good length wide outside off ▶	turning away, drifting in	9%	4.56	1	8%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

Old ball (31+ ov) · 202 balls · 2 wkts · econ 3.09

Top ball type	%	Econ	Wkts
full on the stumps	17%	2.40	0
a good length outside off	13%	4.22	0
full down the leg side	13%	2.54	0
full outside off	12%	2.16	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
A good length wide outside off
50% of mapped wickets (1 of 2)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
14% of runs (19 of 138)

Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Old ball (31+ ov)	202	2	52.0	3.09	101.0	16%	4.86 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Tail (8–11)	128	1	49.0	2.30	128.0	17%	5.00 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

Hard to get away — only 28% of runs are boundaries — a boundary every 29 balls; the strike is rotated in ones and twos; most runs go to the leg side (51%); runs come mostly by working him around (30% of runs).

BOUNDARY %	ROTATED %	BALLS / BOUNDARY
28% runs in 4s/6s	**72%** runs in 1s & 2s	**29**

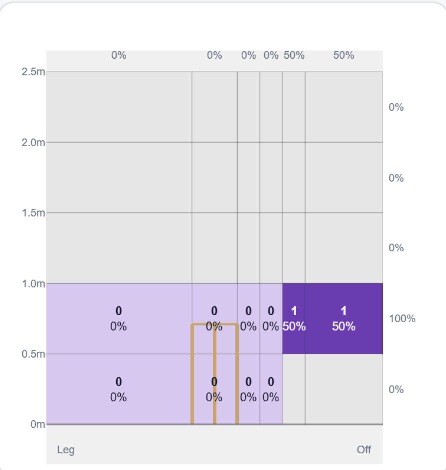
OFF SIDE %	LEG SIDE %	STRAIGHT %
35% of runs	**51%** of runs	**13%** down the ground

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	19	28	30%	2	1.47
Drive	19	22	24%	1	1.16
Cut	14	21	23%	2	1.50
Sweep	10	21	23%	3	2.10

Direction from ball-tracking (all scoring shots); shot type recorded on 68% of scoring balls (65/96) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

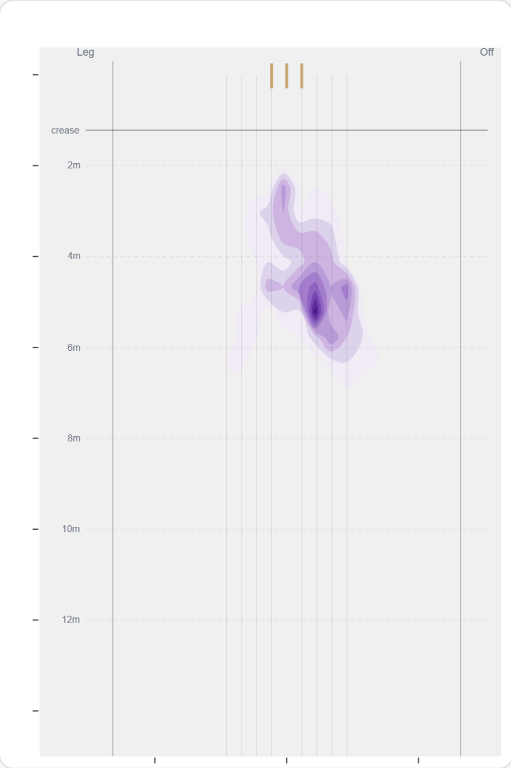


Wicket balls pass the stumps mostly at wide of 6th.

Where They're Scored Off

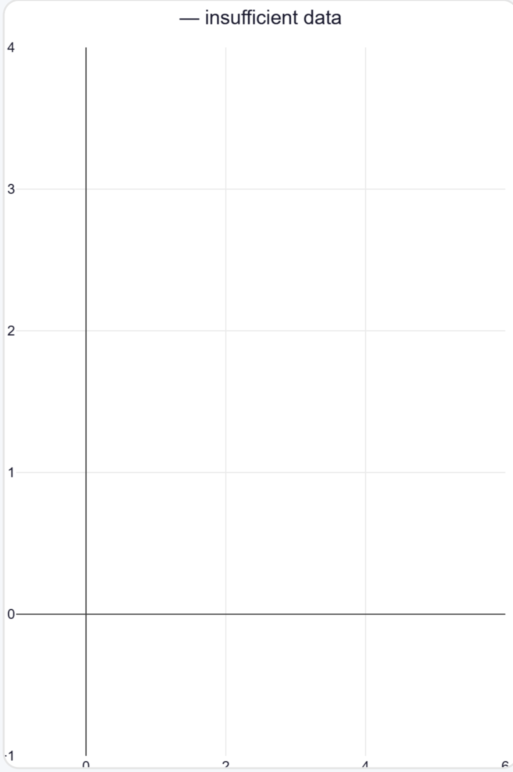
Runs come mostly on the leg side (54%).

Where They Pitch It



Pitches it full on the stumps most often (16%); rarely drops short (0%).

Where Wickets Come From

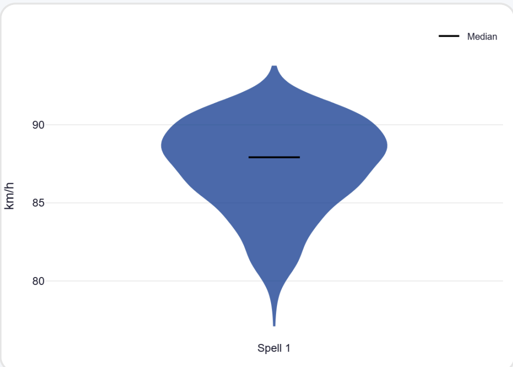


Wickets come mostly from balls pitched a good length wide outside off.

Speed & Spells

He drops ~2.0 km/h from his opening spell to later spells, is a touch slower in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

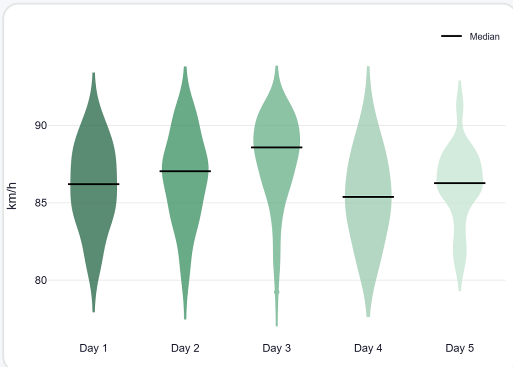


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



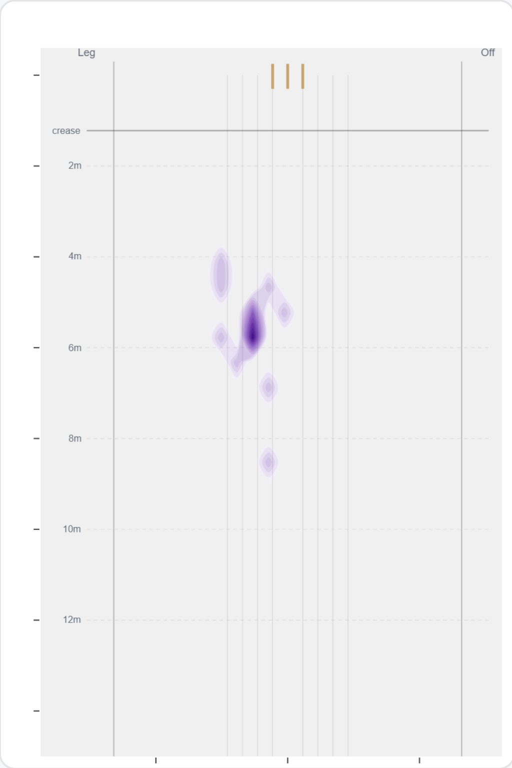
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively round the wicket to left-handers (96%, 281 balls); the over the wicket sample (13 balls) is too small to read into.

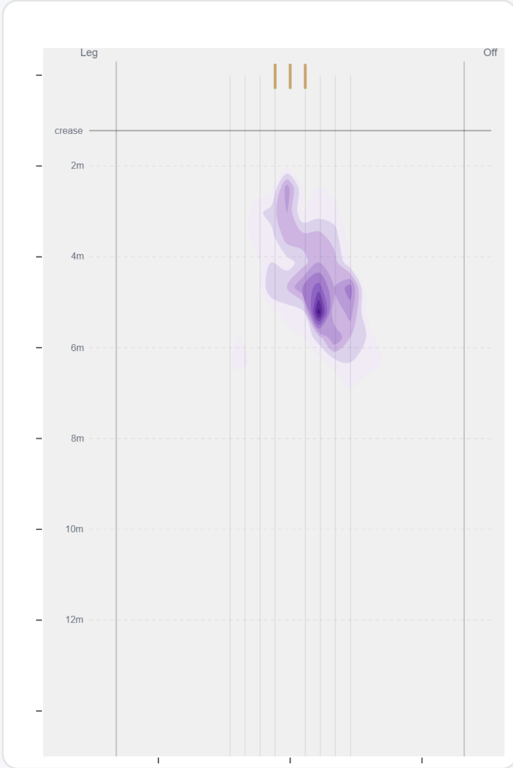
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	13 (4%)	Down leg	—	—	4.15	0	89%
Round	281 (96%)	Stumps	4.7 m	0%	2.84	2	24%

Over the Wicket



Over the wicket — only 13 balls to left-handers, too few to read into.

Round the Wicket



Where he pitches it from round the wicket (281 balls).

Sequencing & Over Construction

Consistent with his length (length spread ±1.3 m; more repeatable than 38% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.8 m	0%	3.84	0.0%
Ball 2	4.9 m	0%	3.72	2.0%
Ball 3	4.7 m	0%	2.94	0.0%
Ball 4	4.7 m	0%	1.92	0.0%
Ball 5	4.4 m	0%	2.08	0.0%
Ball 6	4.8 m	0%	2.88	2.1%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases tight to the stumps (54 cm out, tighter than 82% of right-arm spin); varies his spot on the crease a lot (more than 98% of right-arm spin). Comes wider over the wicket (79 cm over vs 54 cm round).

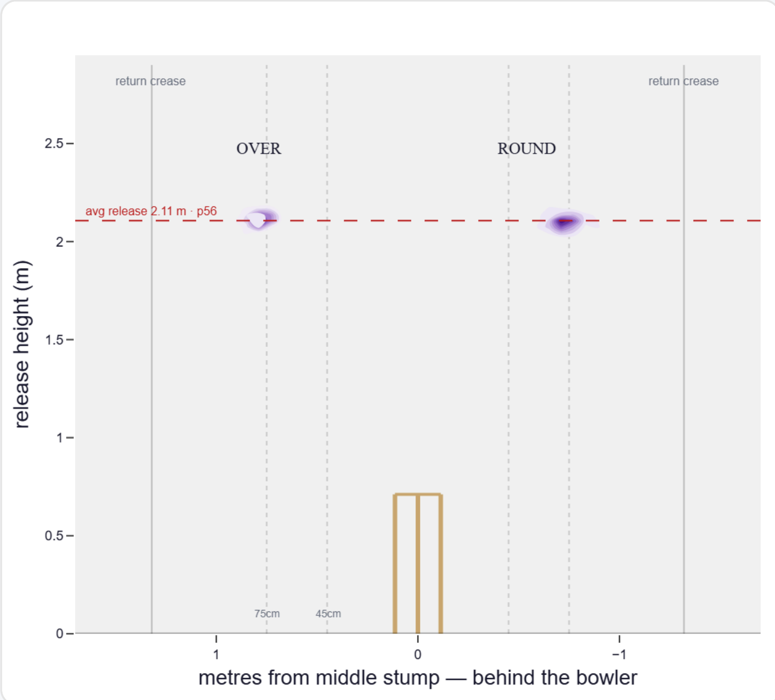
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	41%	250	2.64	1	110.0	250
Wide (>75cm)	59%	354	3.22	5	38.0	71

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	42%	0%	21%	79%
Round the wicket	58%	0%	56%	44%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

Not a big spinner — relies on flight, drift and accuracy.

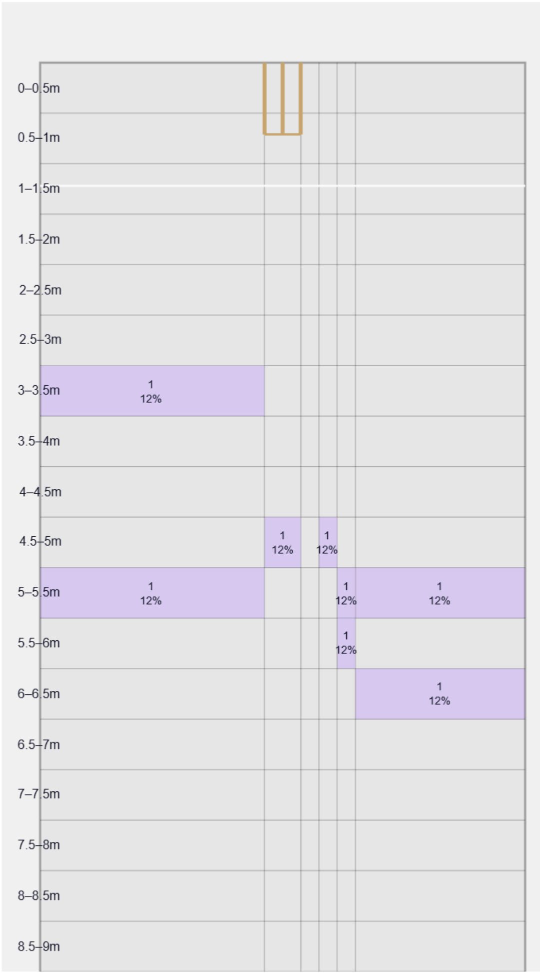
Generates below avg turn and about average drift for a spin bowler; turns it away more to left-hand batters (95%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.70°	57th pct (about average)	3% away / 97% in
Turn	3.04°	24th pct (below avg)	96% away / 4% in
Bounce	4.1°	31st pct (below avg)	—

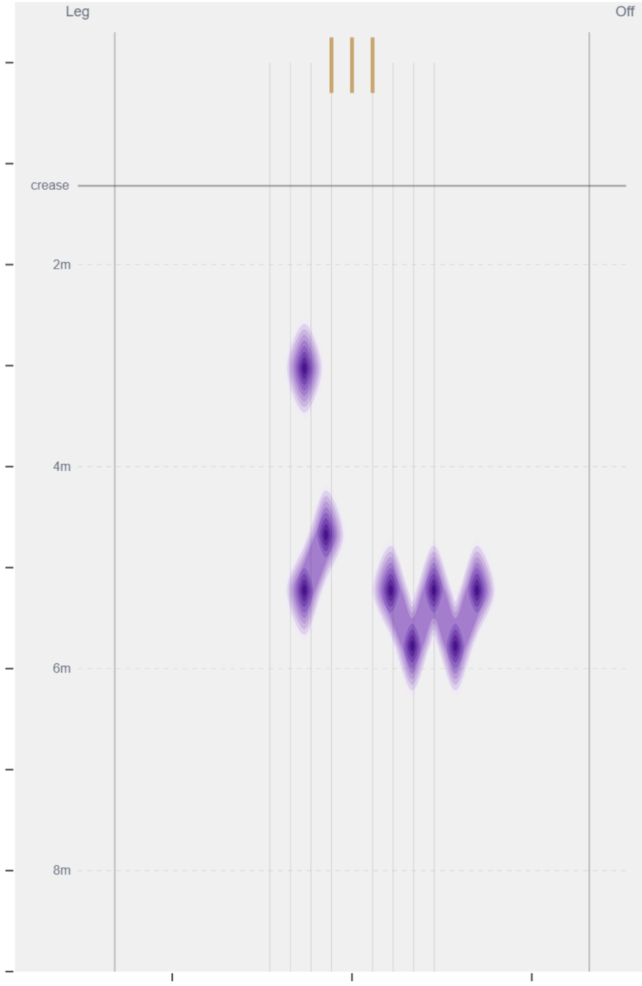
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (25% of play-and-misses). Overall he beats the bat 2.9% of tracked balls (false-shot 12.5%, n=279).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
