Scouting Summary

COMMON THEMES

- Right Fast, averaging 134.5 kph (up to 142.7).
- Typical length is **7-8m** (their good length); median 6.9 m.
- Stock ball is **a good length wide outside off, seaming away, swinging, passing outside off** (23% of deliveries).
- Goes round the wicket 73% of the time against left-handers.

BIGGEST THREATS

- Takes 33% of wickets pitching **full in the 4th-stump channel**.
- Beats the bat 7.6% of tracked balls (false-shot 15.3%).
- Most likely to dismiss you **caught** (100% of wickets).
- 67% of catches are behind the wicket (keeper / slips / gully); most often to cover: short extra, slip: 2nd, gully.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (23% of runs).
- Short ball: 35% of deliveries, economy 5.3 — 1 wkts from 59 short balls.
- Most of his runs leak through the leg side (47%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 8.5).

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2023-03-09 → 2026-06-25)

He's around his career level lately (avg 26 last 5 vs 26 career).

How he gets you out	His %	Base	Index
Caught	100%	68%	**1.48×**

*Share of his 3 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Cover: short extra 1 Slip: 2nd 1 Gully 1

Angle & variations: Round the wicket to LHB (72%), stays over to RHB · slower balls 0.7% (~120 kph)

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — a good length wide outside off, seaming away, swinging, passing outside off (23% of deliveries, economy 5.40). Minor variations: back of a length wide outside off (13%) and a good length outside off (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	seaming away, swinging	23%	5.40	0	13%
back of a length wide outside off ▶	seaming	13%	6.71	0	6%
a good length outside off ▶	seaming	11%	3.43	0	—
full wide outside off ▶	swinging, seaming	9%	8.50	0	—
back of a length down the leg side ▶	seaming	8%	3.60	0	—
full outside off ▶	seaming, swinging	7%	7.33	1	—

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 121 balls · 3 wkts · econ 5.55

Top ball type	%	Econ	Wkts

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
Full in the 4th-stump channel
33% of mapped wickets (1 of 3)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
23% of runs (27 of 115)

Most wickets come from full in the 4th-stump channel, while he leaks the most runs a good length wide outside off.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	121	3	37.3	5.55	40.3	16%	7.59 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

61% of his runs come in boundaries — a boundary every 8 balls; most runs go to the leg side (47%); the drive hurts most (9 fours/sixes at 3.2 runs/ball).

BOUNDARY %

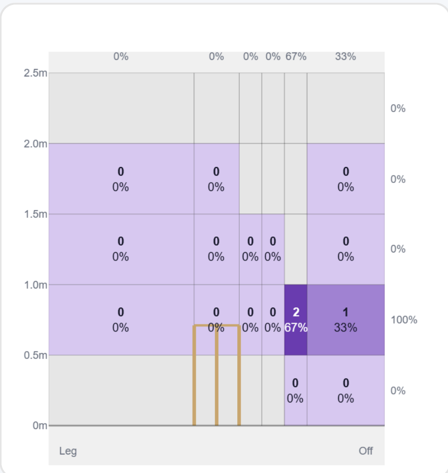
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	16	51	37%	9	3.19
Pull/Hook	21	36	26%	5	1.71
Work/Nudge	19	30	22%	2	1.58

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (65/65) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

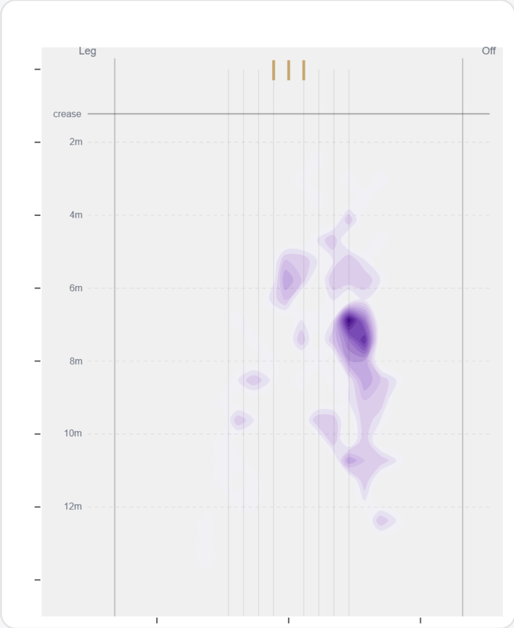


Wicket balls pass the stumps mostly at 6th stump — pitches around 4th stump and moves it back.

Where They're Scored Off

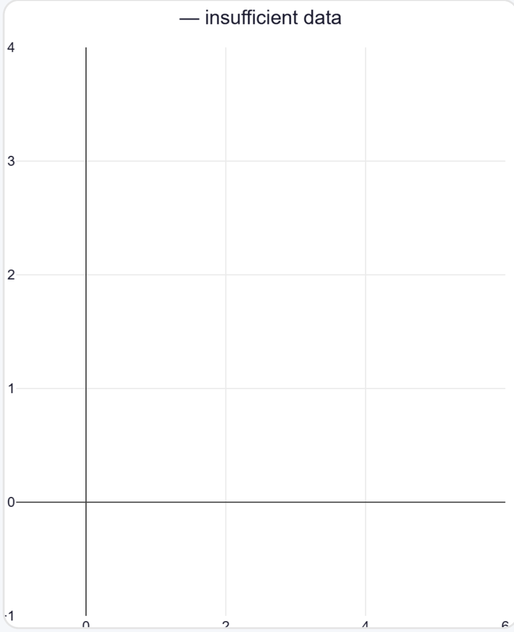
Runs come mostly on the leg side (52%).

Where They Pitch It



Pitches it a good length wide outside off most often (22%); drops short often (34%).

Where Wickets Come From

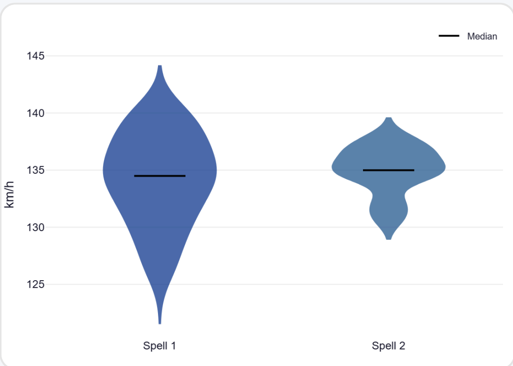


Wickets come mostly from balls pitched full in the 4th-stump channel.

Speed & Spells

He is ~3.0 km/h quicker in later spells, is a touch slower in the 2nd innings.

Speed by Spell



By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

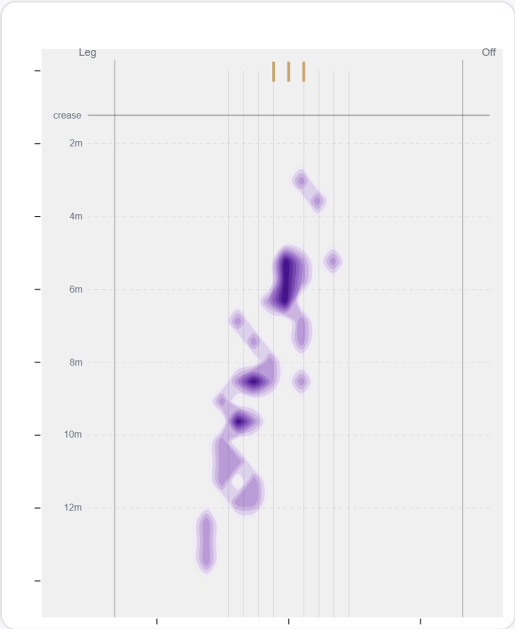
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively round the wicket to left-handers (73%, 124 balls); over the wicket is a rare change-up (27%, 46 balls).

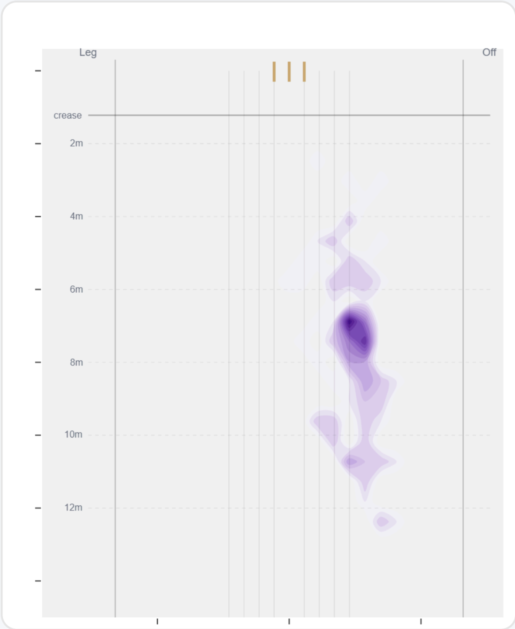
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	46 (27%)	Down leg	8.2 m	25%	3.52	2	30%
Round	124 (73%)	Wide of 6th	7.6 m	19%	5.66	1	68%

Over the Wicket



Where he pitches it from over the wicket (46 balls).

Round the Wicket



Where he pitches it from round the wicket (124 balls).

Sequencing & Over Construction

Across 15 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Release Point & Crease Use

A mid-height release point; releases tight to the stumps (61 cm out, tighter than 71% of right-arm pace). Comes wider round the wicket (61 cm over vs 98 cm round).

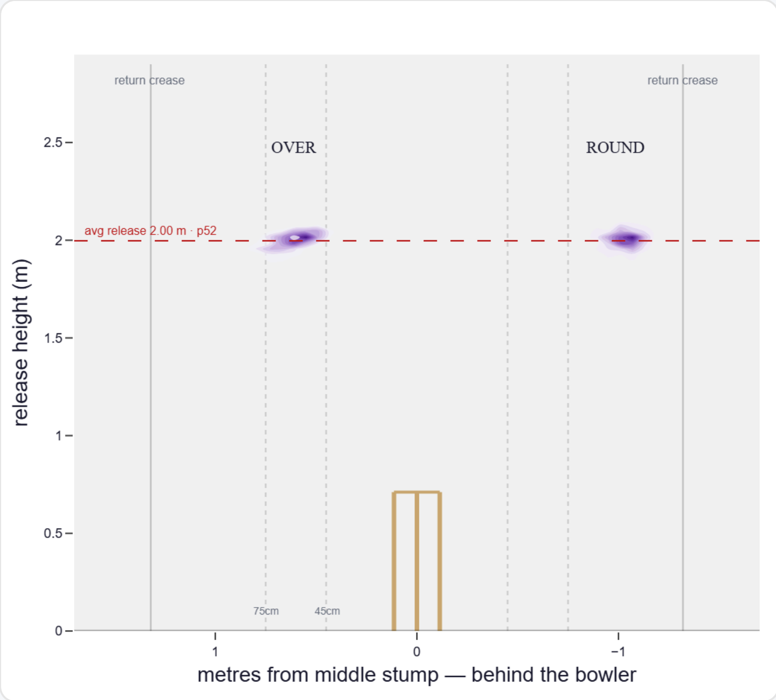
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	68%	512	3.59	12	25.5	43
Wide (>75cm)	30%	225	4.27	4	40.0	56

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	74%	2%	91%	7%
Round the wicket	26%	0%	3%	97%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A seam bowler who moves it both ways (60% away / 40% in); skids through at a lower trajectory.

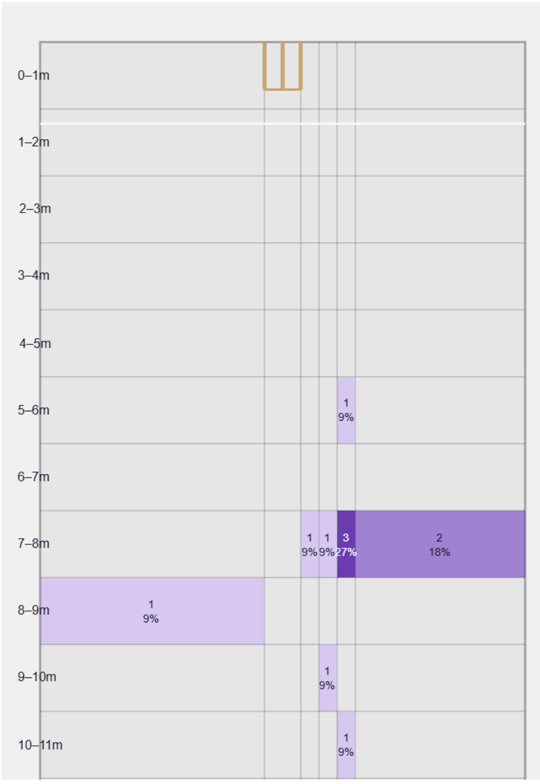
Generates well above avg seam and well below avg swing for a pace bowler; seams it away more to left-hand batters (60%).

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.52°	9th pct (well below avg)	69% away / 31% in
Seam	0.65°	82nd pct (well above avg)	60% away / 40% in
Bounce	3.7°	20th pct (below avg)	—

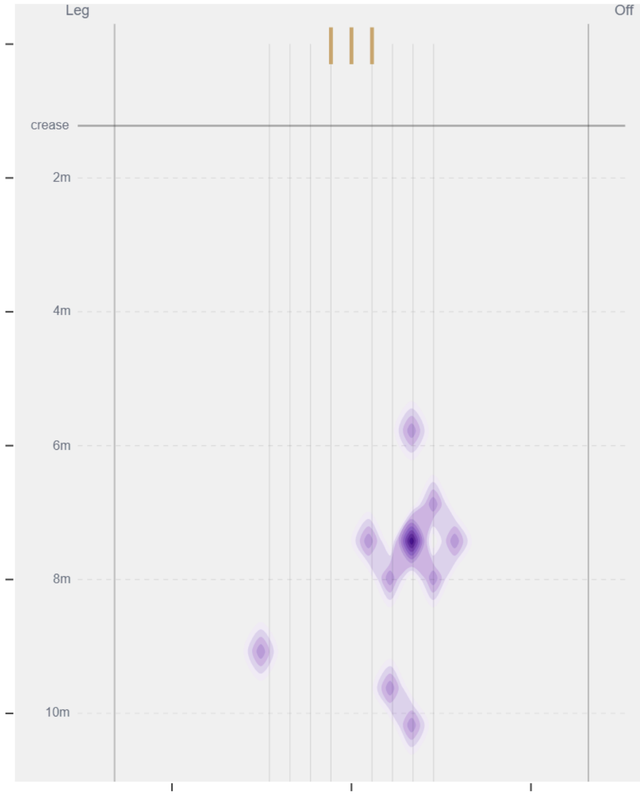
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 6th stump** (27% of play-and-misses). Overall he beats the bat 7.6% of tracked balls (false-shot 15.3%, n=170).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
