Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 79.0 kph (up to 81.8).
- Typical length is **4-5m** (their good length); median 4.9 m.
- Stock ball is **full on the 6th stump** (31% of deliveries).
- Goes round the wicket 0% of the time against left-handers.
- Turns it 3.7° on average; 12% of balls turn ≥5°.

BIGGEST THREATS

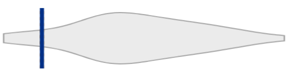
- Beats the bat 0.0% of tracked balls (false-shot 3.7%).
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (40% of runs).

Bowling Fingerprint

Release height
P12 → P10



1.93 m · vs left-arm spin

Crease width

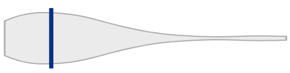
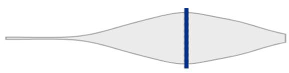
106 cm · vs left-arm spin

Crease variation
P43 → P41



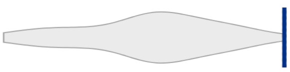
±13 cm · vs left-arm spin

Turn
P50 → P50



3.6° · vs spin bowlers

Drift
P98 → P97

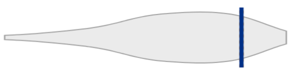


2.5° · vs spin bowlers

Bounce
P95 → P95

4.9° · vs spin bowlers

Repeatability
P82 → P83



±0.9 m · vs spin bowlers

__Solid line = career__, __dotted = last 3 years__ (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). __Crease variation__ = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. __Repeatability__ = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

Threat Profile

BEATEN %	FALSE-SHOT %	AVG TURN	AVG DRIFT
0.0% n=27	**3.7%** beaten + edges	**3.7°** 12% ≥5°	**2.1°** in-air

Angle & variations: Round the wicket to RHB (97%), stays over to LHB

Danger Zones (vs left-handers)

RUNS — WHERE MOST CONCEDED

Full wide outside off

40% of runs (4 of 10)

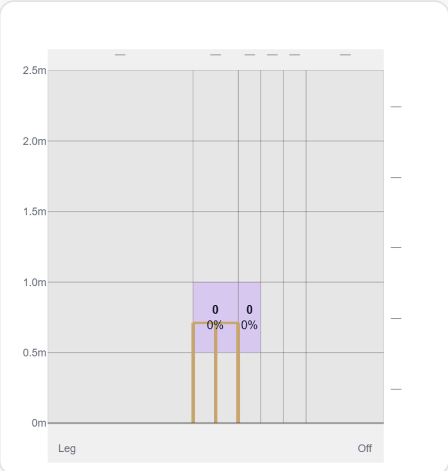
Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Structurally he takes the ball away from the RHB — harder work for Green, Inglis, Labuschagne, Smith, Webster regardless of individual reads; a left/right pairing at the crease blunts it.

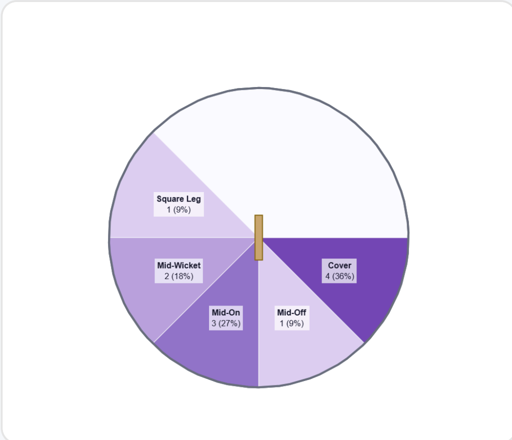
Pitch Maps & Scoring

At the Stumps (wickets)



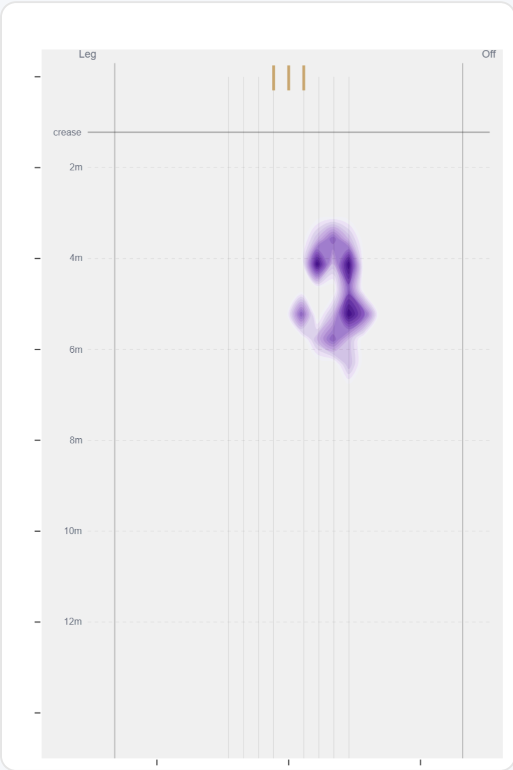
Ball position as it passes the stumps for wicket balls.

Where They're Scored Off



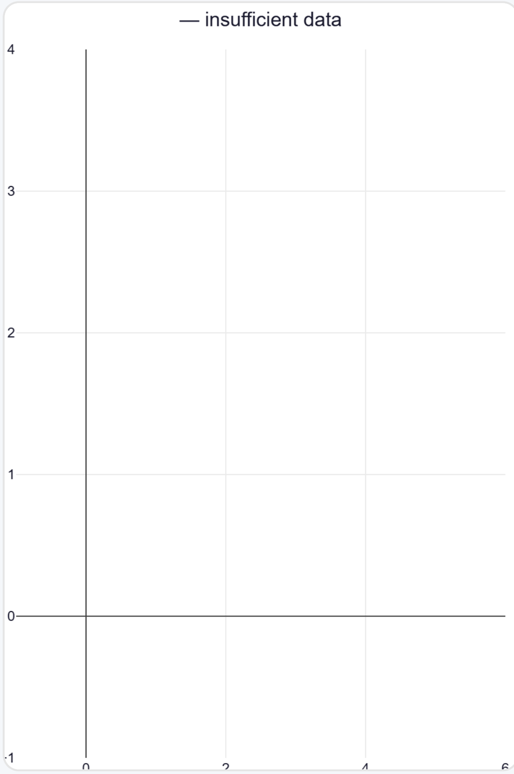
Runs come mostly on the off side (54%).

Where They Pitch It



Pitches it full on the 6th stump most often (30%); rarely drops short (0%).

Where Wickets Come From

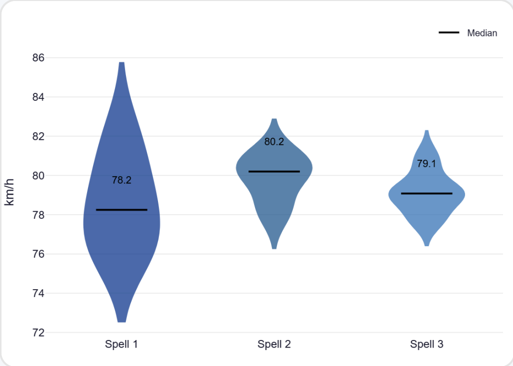


Pitch location of wicket-taking balls.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings.

Speed by Spell

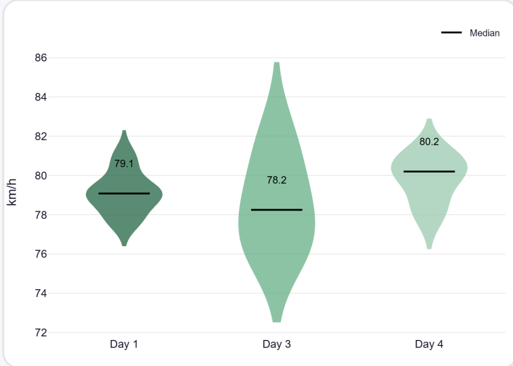


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



By match day — fatigue across the game.

Sequencing & Over Construction

Release Point & Crease Use

A low, skiddy release point (lower than 88% of left-arm spin); releases wide of the stumps (106 cm out, wider than 93% of left-arm spin).

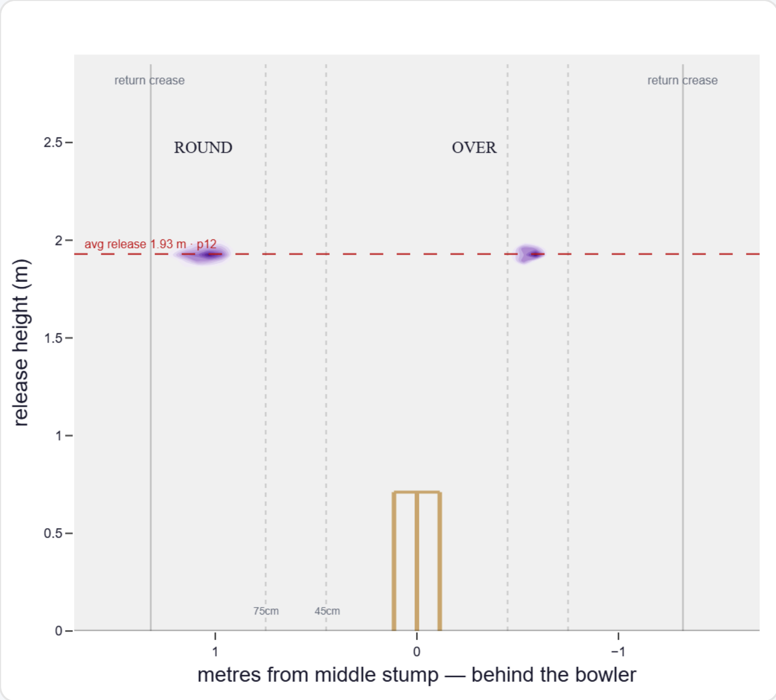
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	7%	31	2.13	0	—	—
Wide (>75cm)	92%	395	2.37	11	14.2	36

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Round the wicket	91%	0%	0%	99%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A moderate spinner of the ball; extracts steep bounce; gets sharp drift in the air.

Generates about average turn and well above avg drift for a spin bowler; turns it in more to left-hand batters (100%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	2.52°	97th pct (well above avg)	100% away / 0% in
Turn	3.64°	50th pct (about average)	0% away / 100% in
Bounce	4.9°	95th pct (well above avg)	—

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
