Scouting Summary

COMMON THEMES

- Right Fast, averaging 132.9 kph (up to 138.8).
- Typical length is **6-7m** (their good length); median 7.0 m.
- Stock ball is **a good length on the stumps, swinging away, seaming back, passing outside off** (19% of deliveries).
- Goes round the wicket 45% of the time against left-handers.
- **Round the wicket** he shifts his pitching line from stumps to wide of 6th.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Good Length** (3 wkts, 0.7% adjusted strike).
- Takes 12% of wickets pitching **a good length on the stumps**.
- Beats the bat 11.6% of tracked balls (false-shot 20.1%).
- Gets you **bowled** more than most — 50% of his wickets (2.8× the typical rate for this type).
- 75% of catches are behind the wicket (keeper / slips / gully); most often to slip: 3rd, fine leg: regulation, keeper.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (16% of runs).
- Short ball: 26% of deliveries, economy 3.9 — 3 wkts from 185 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (52%) — his main scoring release.

Solid line = career, ***dotted = last 3 years*** *(where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial).* ***Crease variation*** *= how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball.* ***Repeatability*** *= length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-04-20 → 2026-06-28)

He's less penetrative of late (avg 57 in his last 5 Tests vs 33 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Bowled	50%	18%	2.79×
Caught	50%	68%	0.74×

*Share of his 8 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Slip: 3rd 2 Fine leg: regulation 1 Keeper 1

Angle & variations: Round the wicket to LHB (45%), stays over to RHB · slower balls 2.1% (~116 kph)

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — a good length on the stumps, swinging away, seaming back, passing outside off (19% of deliveries, economy 1.93). Minor variations: a good length wide outside off (18%) and a good length down the leg side (12%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length on the stumps ▶	swinging away, seaming back	19%	1.93	1	20%
a good length wide outside off ▶	swinging both ways, seaming away	18%	2.73	1	19%
a good length down the leg side ▶	swinging both ways, seaming both ways	12%	2.07	0	21%
a good length outside off ▶	swinging both ways, seaming both ways	10%	2.56	1	19%
full wide outside off ▶	seaming both ways, swinging away	7%	6.81	0	23%
a good length in the channel ▶	swinging away, seaming back	7%	3.67	0	20%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 453 balls · 4 wkts · econ 3.51

Top ball type	%	Econ	Wkts
a good length wide outside off	21%	2.41	1
a good length on the stumps	19%	2.11	1
a good length outside off	9%	2.14	1
a good length down the leg side	9%	1.71	0

Old ball (31+ ov) · 263 balls · 4 wkts · econ 2.81

Top ball type	%	Econ	Wkts
a good length on the stumps	19%	1.59	0
a good length down the leg side	17%	2.40	0
a good length wide outside off	13%	3.60	0
a good length outside off	10%	3.23	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
A good length on the stumps
12% of mapped wickets (1 of 8)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
16% of runs (61 of 391)

DANGER LENGTH
Good Length
3 wkts / 474 balls · 0.7% adj (0.6% raw) · low sample

Most wickets come from a good length on the stumps, while he leaks the most runs a good length wide outside off.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	453	4	66.2	3.51	113.2	21%	6.89 m
Old ball (31+ ov)	263	4	30.8	2.81	65.8	18%	7.26 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	368	5	40.0	3.26	73.6	22%	6.87 m
Middle (4–7)	296	1	165.0	3.34	296.0	18%	7.23 m

Bangs it in more with the old ball (3%→14% short); more short balls at the tail (23% vs 4% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

58% of his runs come in boundaries — a boundary every 13 balls; most runs go to the leg side (52%); the drive hurts most (29 fours/sixes at 2.6 runs/ball).

BOUNDARY %
58%
runs in 4s/6s

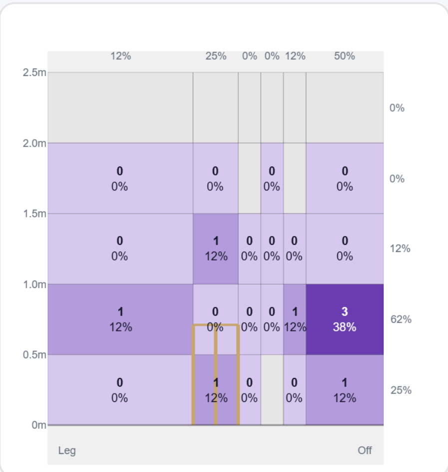
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	63	166	45%	29	2.63
Work/Nudge	65	94	26%	6	1.45
Pull/Hook	22	51	14%	7	2.32
Cut	19	48	13%	9	2.53

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (185/185) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

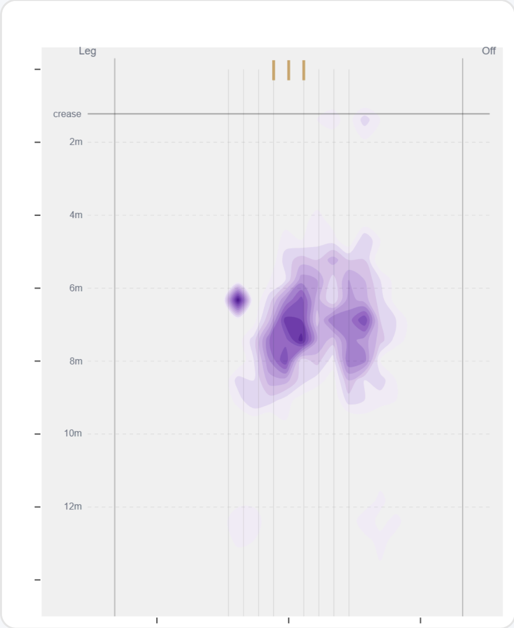


Wicket balls pass the stumps mostly at wide of 6th — pitches around 6th stump and moves it back.

Where They're Scored Off

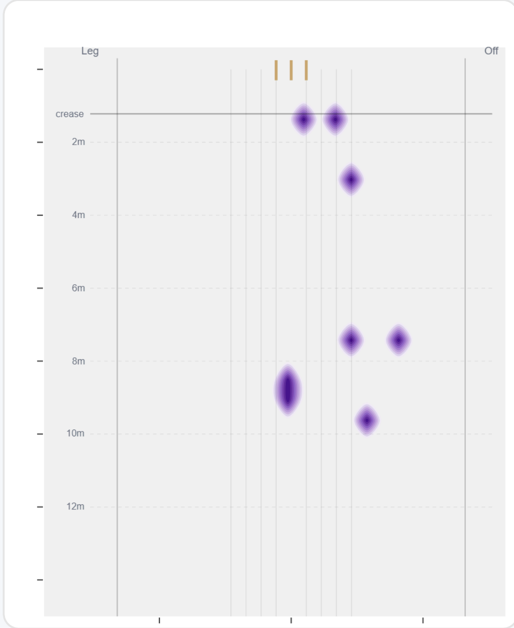
Runs come mostly on the leg side (54%).

Where They Pitch It



Pitches it a good length on the stumps most often (19%); mixes in the short ball (25%).

Where Wickets Come From

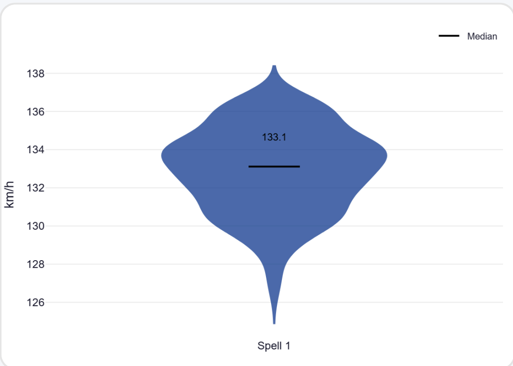


Wickets come mostly from balls pitched a good length on the stumps.

Speed & Spells

He is ~2.4 km/h quicker in later spells, keeps his pace into the 2nd innings, and loses ~1.8 km/h by the later days.

Speed by Spell

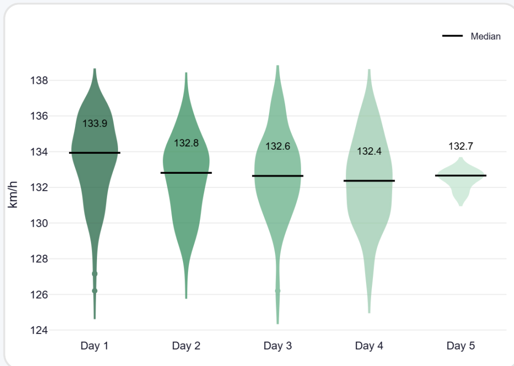


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



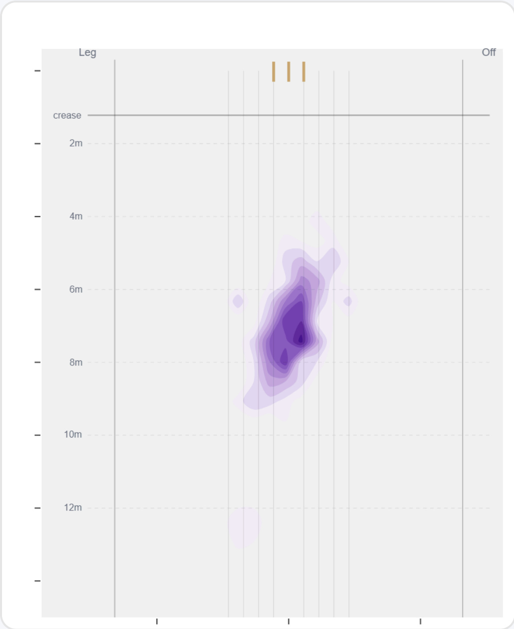
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 3.16→3.36, a wicket every 78→108 balls (over→round).

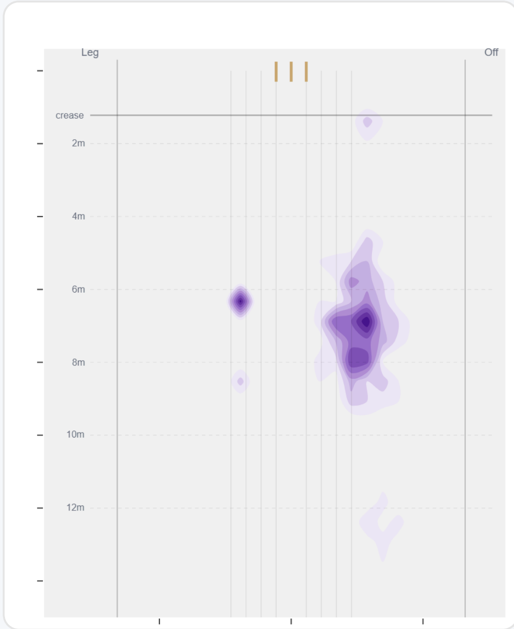
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	391 (55%)	Stumps	7.1 m	8%	3.16	5	54%
Round	325 (45%)	Wide of 6th	7.0 m	8%	3.36	3	62%

Over the Wicket



Where he pitches it from over the wicket (391 balls).

Round the Wicket



Where he pitches it from round the wicket (325 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ±2.2 m; more repeatable than 64% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 31 dismissals, the wicket ball lands about 43 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.2 m	7%	2.87	1.7%
Ball 2	7.1 m	10%	2.51	0.9%
Ball 3	6.9 m	7%	3.55	1.7%
Ball 4	7.1 m	8%	3.81	0.8%
Ball 5	6.9 m	11%	2.73	0.8%
Ball 6	7.0 m	6%	3.50	0.8%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 86% of right-arm pace); releases about 68 cm from the middle stump; varies his spot on the crease a lot (more than 96% of right-arm pace). Comes wider round the wicket (68 cm over vs 88 cm round).

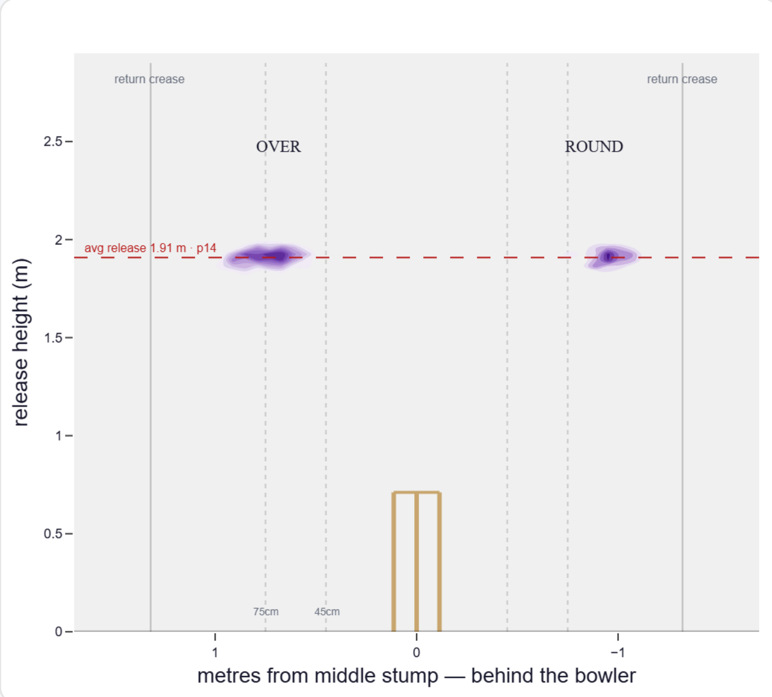
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	44%	825	3.69	19	26.7	43
Wide (>75cm)	55%	1,024	3.32	17	33.4	60

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	83%	0%	53%	47%
Round the wicket	17%	0%	3%	97%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A swing bowler who moves it both ways (63% away / 37% in).

Generates below avg seam and above avg swing for a pace bowler; seams it away more to left-hand batters (51%).

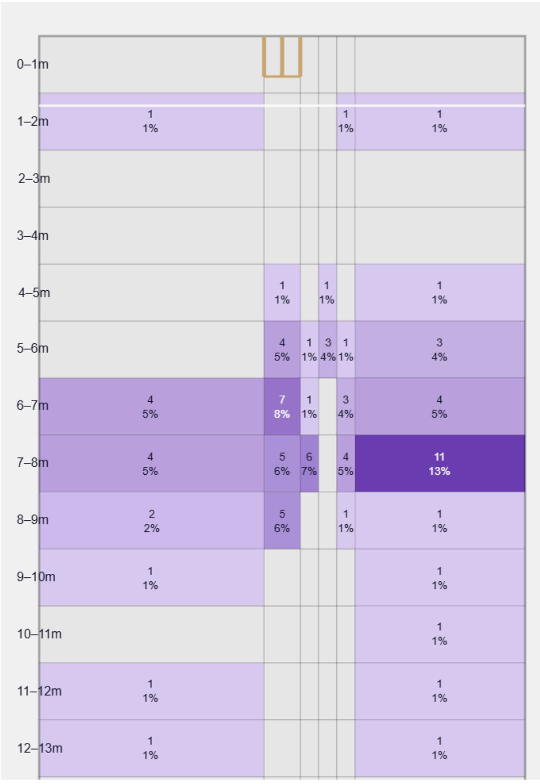
Swing by ball age to left-hand batters: new ball (≤25 ov, n=214) 51% away / 49% in; old ball (≥40 ov, n=125) 80% away / 20% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.89°	61st pct (above avg)	63% away / 37% in
Seam	0.53°	29th pct (below avg)	51% away / 49% in
Bounce	4.1°	59th pct (about average)	—

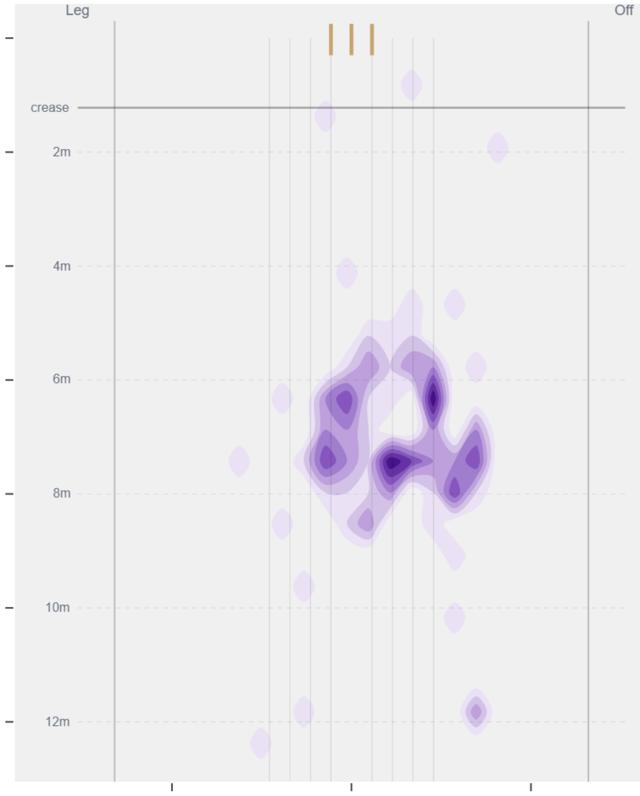
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (20% of play-and-misses). Overall he beats the bat 11.6% of tracked balls (false-shot 20.1%, n=716).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
