Scouting Summary

COMMON THEMES

- Left Fast, averaging 141.1 kph (up to 150.4).
- Typical length is **6-7m** (their good length); median 6.4 m.
- Stock ball is **a good length on the stumps, swinging away, seaming both ways, hitting the top of off** (15% of deliveries).
- Goes round the wicket 28% of the time against right-handers.
- **Round the wicket** he shifts his pitching line from stumps to wide of 6th.

BIGGEST THREATS

- Most dangerous length is **Yorker/Full** (41 wkts, 3.2% adjusted strike).
- Danger pitching line: **Stumps** (over the wicket).
- Takes 14% of wickets pitching **a good length on the stumps**, over the wicket.
- Beats the bat 16.7% of tracked balls (false-shot 30.3%).
- Most likely to dismiss you **caught** (66% of wickets).
- 45% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 2nd, gully.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (10% of runs).
- Short ball: 26% of deliveries, economy 3.1 — 58 wkts from 3624 short balls.
- Away from yorker/full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (57%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 4.6, beats the bat only 43%).

*Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2025-11-21 → 2026-01-04)

He's striking more often right now (avg 20 in his last 5 Tests vs 26 career).

Angle & variations: Round the wicket to RHB (27%), stays over to LHB · slower balls 2.0% (~128 kph)

Stock Ball & Ball Types (vs right-handers) ▶ watch stock balls

Stock ball — a good length on the stumps, swinging away, seaming both ways, hitting the top of off (15% of deliveries, economy 2.12). Minor variations: full outside off (13%) and full on the stumps (10%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length on the stumps ▶	swinging away, seaming both ways	15%	2.12	41	28%
full outside off ▶	swinging away, seaming both ways	13%	4.44	40	34%
full on the stumps ▶	swinging both ways, seaming both ways	10%	3.89	50	31%
full wide outside off ▶	swinging away, seaming both ways	9%	4.58	32	43%
a good length wide outside off ▶	swinging away, seaming away	8%	2.34	18	30%
a good length outside off ▶	swinging away, seaming both ways	7%	2.38	14	23%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 5,556 balls · 105 wkts · econ 3.17

Top ball type	%	Econ	Wkts
a good length on the stumps	18%	1.86	24
full outside off	13%	4.60	14
full on the stumps	11%	4.07	18
a good length in the channel	9%	2.24	9

*Most lethal: **full Stumps** (2.9 wkts/100).*

Old ball (31+ ov) · 8,558 balls · 191 wkts · econ 3.45

Top ball type	%	Econ	Wkts
a good length on the stumps	13%	2.35	17
full outside off	13%	4.33	26
full on the stumps	10%	3.77	32
full wide outside off	10%	4.55	22

*Most lethal: **yorker/full Stumps** (5.3 wkts/100).*

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) ▶ watch danger balls

WICKETS — WHERE MOST COME FROM
A good length on the stumps
14% of mapped wickets (41 of 294)

RUNS — WHERE MOST CONCEDED
Full on the stumps
10% of runs (765 of 7806)

DANGER LINE
Stumps
103 wkts / 4,287 balls · 2.4% adj (2.4% raw)

DANGER LENGTH
Yorker/Full
41 wkts / 1,235 balls · 3.2% adj (3.3% raw)

MOST LETHAL ZONE (BY RATE)
Yorker/Full / Stumps
15 wkts / 265 balls · 4.8% adj (5.7% raw)

Most threatening pitching full on the stumps (41 wkts, 3.2% strike). Most wickets come from a good length on the stumps, while he leaks the most runs full on the stumps.

*Zone shares are over his **mapped** wickets — 2 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Danger by ball age

NEW BALL (≤30 OV)

full Stumps

most lethal cell · 2.9 wkts/100 · danger length yorker/full · 105 wkts off 5,556 balls

OLD BALL (31+ OV)

yorker/full Stumps

most lethal cell · 5.3 wkts/100 · danger length yorker/full · 191 wkts off 8,558 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	5,556	105	28.0	3.17	52.9	29%	6.46 m
Old ball (31+ ov)	8,558	191	25.8	3.45	44.8	31%	6.43 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	5,183	86	31.8	3.16	60.3	28%	6.43 m
Middle (4–7)	6,714	120	31.9	3.42	56.0	28%	6.42 m
Tail (8–11)	2,210	90	14.3	3.50	24.6	40%	6.61 m

Bangs it in more with the old ball (5%→12% short); more short balls at the tail (16% vs 8% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

55% of his runs come in boundaries — a boundary every 13 balls; most runs go to the off side (57%); the drive hurts most (219 fours/sixes at 2.6 runs/ball).

BOUNDARY %
55%
runs in 4s/6s

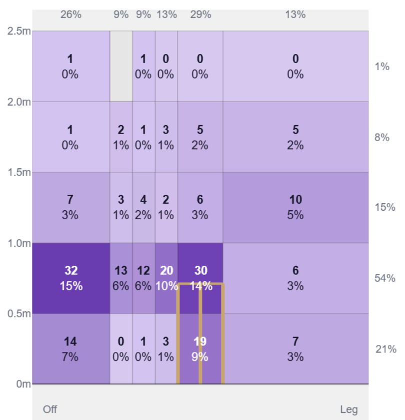
Slog	20	65	2%	11	3.25
Ramp/Scoop	8	29	1%	6	3.62

Direction from ball-tracking (all scoring shots); shot type recorded on 43% of scoring balls (1536/3590) — groups with <5 balls omitted.

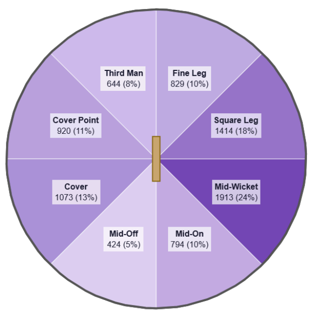
Pitch Maps & Scoring

At the Stumps (wickets)



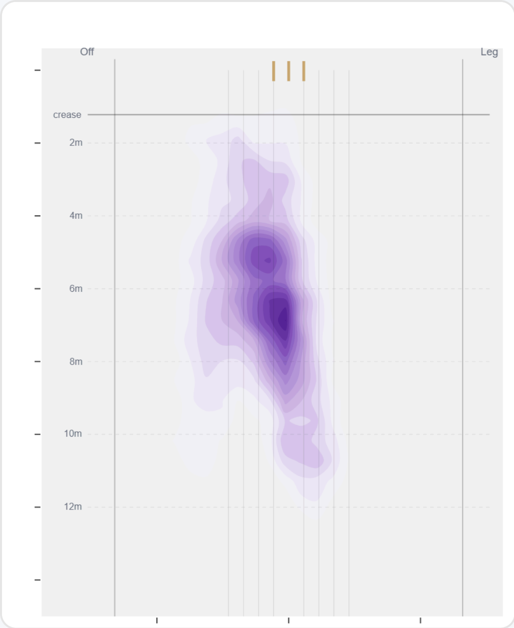
Wicket balls pass the stumps mostly at stumps.

Where They're Scored Off



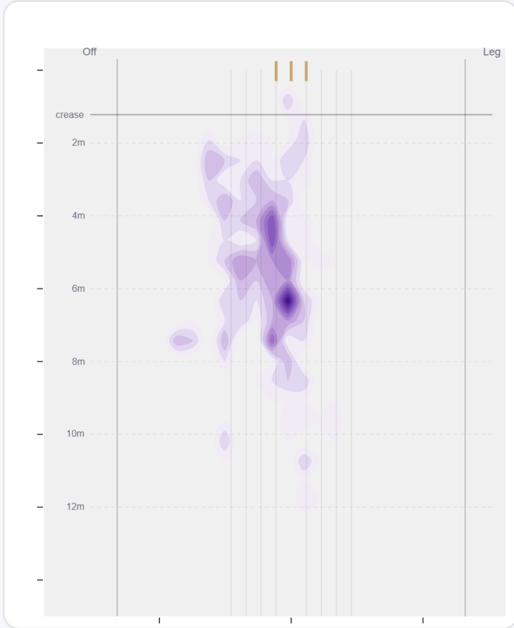
Runs come mostly on the off side (61%).

Where They Pitch It



Pitches it a good length on the stumps most often (14%); mixes in the short ball (25%).

Where Wickets Come From

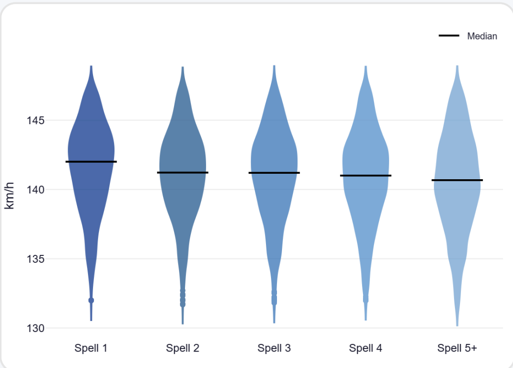


Wickets come mostly from balls pitched a good length on the stumps, but strikes most often pitching on the stumps.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

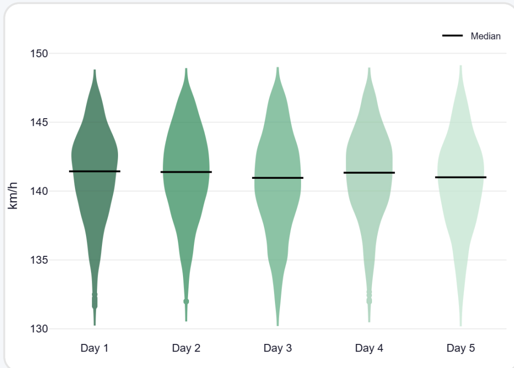


By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day



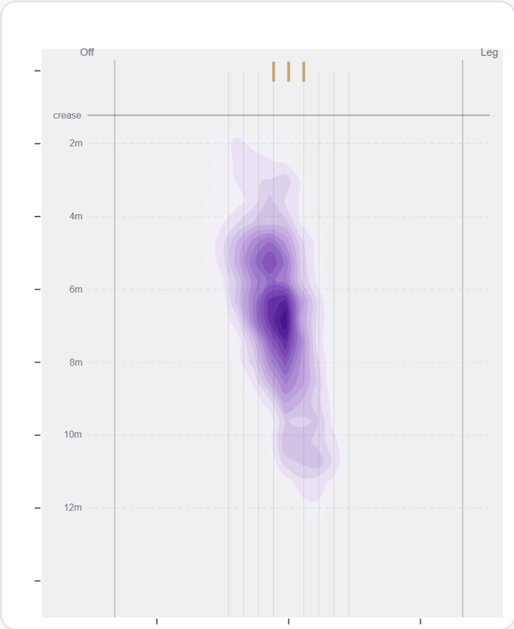
By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 3.32→3.38, a wicket every 50→43 balls (over→round).

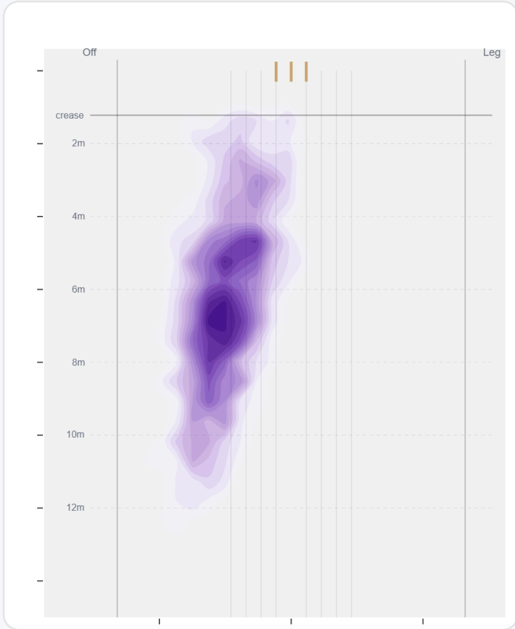
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	10197 (72%)	Stumps	6.5 m	10%	3.32	204	56%
Round	3917 (28%)	Wide of 6th	6.3 m	9%	3.38	92	52%

Over the Wicket



Where he pitches it from over the wicket (10197 balls).

Round the Wicket



Where he pitches it from round the wicket (3917 balls).

Sequencing & Over Construction

Variable with his length (length spread ±2.5 m; more repeatable than 0% of pace bowlers); tends to bang it in later in the over (short 7%→12% by the 5th–6th ball); and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 39% of the time after banging one in; sets batters up then pitches fuller for the wicket (44% of dismissals come off a ball fuller than the one before); and tends to strike with a straighter ball after working across the batter (38% straighter than the ball before).

Across 351 dismissals, the wicket ball lands about 76 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	6.4 m	6%	3.30	2.3%
Ball 2	6.5 m	8%	3.29	2.7%
Ball 3	6.5 m	9%	3.38	1.9%
Ball 4	6.5 m	12%	3.35	2.1%
Ball 5	6.7 m	14%	3.43	1.6%
Ball 6	6.4 m	10%	3.26	1.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 73% of left-arm pace); releases tight to the stumps (31 cm out, tighter than 96% of left-arm pace). Comes wider round the wicket (31 cm over vs 119 cm round).

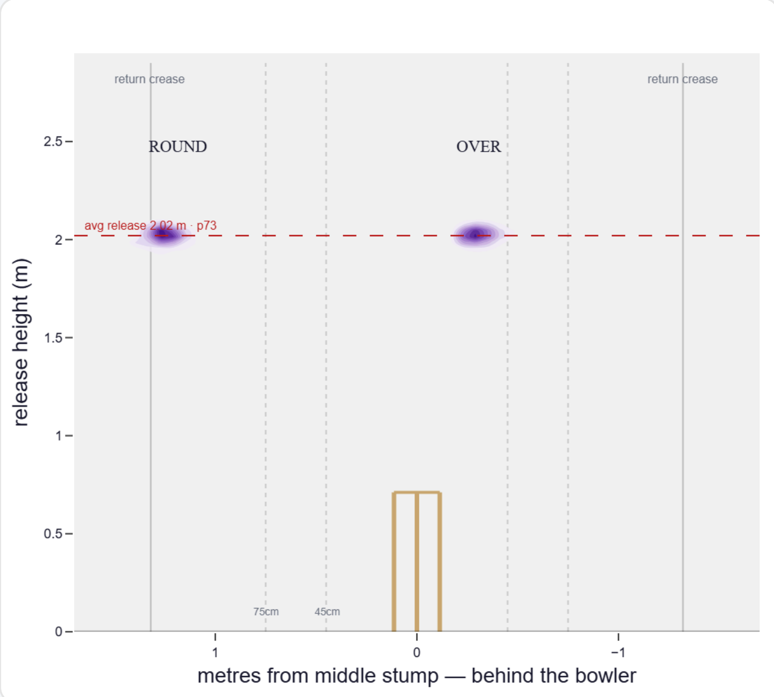
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	76%	8,475	3.44	201	24.2	42
Standard (45–75)	5%	563	3.86	12	30.2	47
Wide (>75cm)	19%	2,087	3.59	54	23.1	39

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	81%	94%	6%	0%
Round the wicket	19%	2%	0%	98%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A swing bowler who predominantly outswing (67%); skids through at a lower trajectory.

Generates about average seam and above avg swing for a pace bowler; seams it away more to right-hand batters (53%).

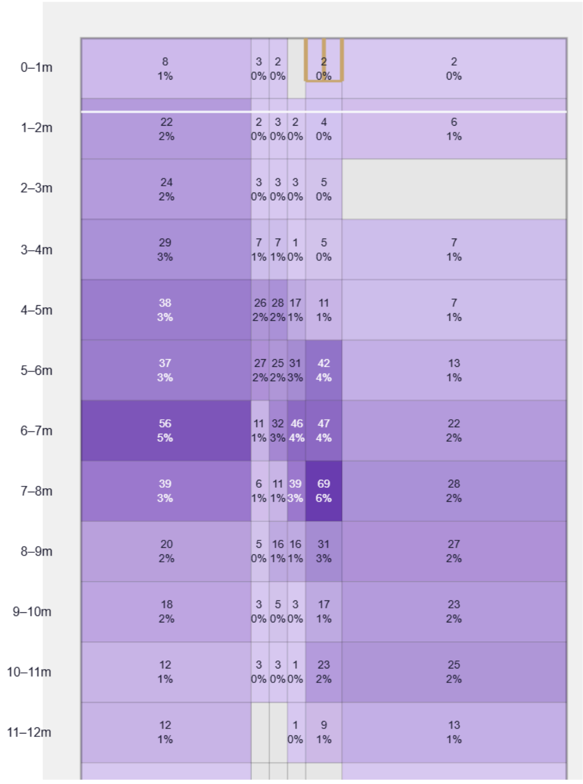
Swing by ball age to right-hand batters: new ball (≤25 ov, n=1836) 58% away / 42% in; old ball (≥40 ov, n=2228) 72% away / 28% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	1.00°	74th pct (above avg)	67% away / 33% in
Seam	0.55°	40th pct (about average)	54% away / 46% in
Bounce	3.7°	16th pct (well below avg)	—

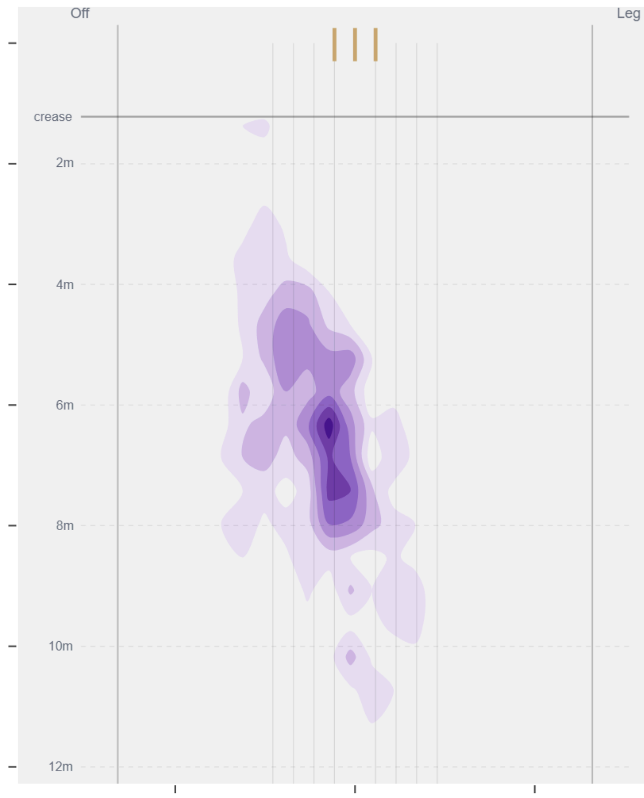
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (13% of play-and-misses). Overall he beats the bat 16.7% of tracked balls (false-shot 30.3%, n=6,929).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
