Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 82.9 kph (up to 93.7).
- Typical length is **4-5m** (their good length); median 4.6 m.
- Stock ball is **full outside off, turning in, drifting away, hitting the stumps** (19% of deliveries).
- Goes round the wicket 13% of the time against left-handers.
- Turns it 2.4° on average; 6% of balls turn ≥5°.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Good Length** (7 wkts, 2.7% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 23% of wickets pitching **full wide outside off**.
- Beats the bat 5.2% of tracked balls (false-shot 11.8%).
- Gets you **LBW** more than most — 27% of his wickets (1.3× the typical rate for this type).
- 25% of catches are behind the wicket (keeper / slips / gully); most often to long on: regulation, slip: 1st, keeper.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (13% of runs).
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak straight down the ground (38%) — his main scoring release.
- Cash in when he goes **good length wide outside off** (economy 5.6, beats the bat only 15%).

Bowling Fingerprint

Changing (last 3 years vs career): repeatability down; crease width down.

***Solid line = career**, **dotted = last 3 years** (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 5 Tests · 2024-03-30 → 2024-09-27)

He's less penetrative of late (avg 43 in his last 5 Tests vs 32 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

Stock Ball & Ball Types (vs left-handers) ▶ watch stock balls

Stock ball — full outside off, turning in, drifting away, hitting the stumps (19% of deliveries, economy 3.45). Minor variations: full wide outside off (16%) and a good length outside off (15%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full outside off ▶	turning in, drifting away	19%	3.45	1	6%
full wide outside off ▶	turning in, drifting away	16%	4.15	3	22%
a good length outside off ▶	turning in, drifting away	15%	2.76	4	14%
full on the stumps ▶	turning in, drifting away	14%	2.60	0	7%
full in the channel ▶	turning in, drifting away	12%	2.73	2	7%
a good length wide outside off ▶	turning in, drifting away	8%	5.57	2	15%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 230 balls · 5 wkts · econ 3.97

Top ball type	%	Econ	Wkts
full outside off	22%	3.88	1
full wide outside off	20%	5.58	2
a good length outside off	16%	2.47	0
full in the channel	15%	2.44	0

Old ball (31+ ov) · 475 balls · 10 wkts · econ 3.46

Top ball type	%	Econ	Wkts
full outside off	18%	3.21	0
full on the stumps	17%	2.46	0
a good length outside off	15%	2.91	4
full wide outside off	14%	3.22	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) ▶ watch danger balls

WICKETS — WHERE MOST COME FROM
Full wide outside off
23% of mapped wickets (3 of 13)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
13% of runs (53 of 411)

DANGER LINE
Wide of 6th
5 wkts / 167 balls · 2.7% adj (3.0% raw)

DANGER LENGTH
Good Length
7 wkts / 239 balls · 2.7% adj (2.9% raw)

MOST LETHAL ZONE (BY RATE)
Full / Wide of 6th
3 wkts / 91 balls · 2.6% adj (3.3% raw) · low sample

Most threatening pitching a good length wide outside off (7 wkts, 2.7% strike). Most wickets come from full wide outside off, while he leaks the most runs a good length wide outside off.

*Zone shares are over his **mapped** wickets — 2 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	230	5	30.4	3.97	46.0	13%	4.64 m
Old ball (31+ ov)	475	10	27.4	3.46	47.5	11%	4.61 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	300	6	29.2	3.50	50.0	12%	4.72 m
Middle (4–7)	275	4	46.2	4.04	68.8	8%	4.34 m
Tail (8–11)	130	5	13.2	3.05	26.0	24%	4.95 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

49% of his runs come in boundaries — a boundary every 14 balls; most runs go to straight down the ground (38%); the sweep hurts most (14 fours/sixes at 2.6 runs/ball).

BOUNDARY %
49%
runs in 4s/6s

ROTATED %

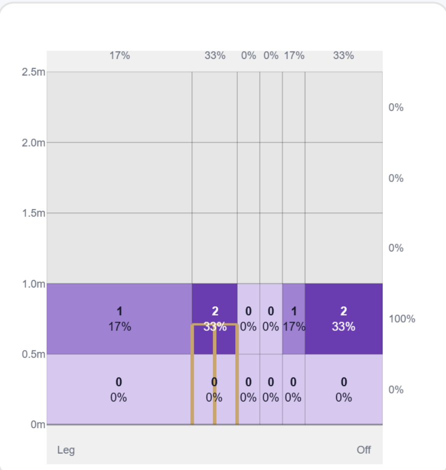
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	75	91	29%	2	1.21
Drive	36	84	26%	12	2.33
Sweep	28	72	23%	14	2.57
Slog	11	36	11%	7	3.27
Cut	11	20	6%	2	1.82
Ramp/Scoop	5	10	3%	1	2.00

Direction from ball-tracking (all scoring shots); shot type recorded on 73% of scoring balls (171/234) — groups with <5 balls omitted.

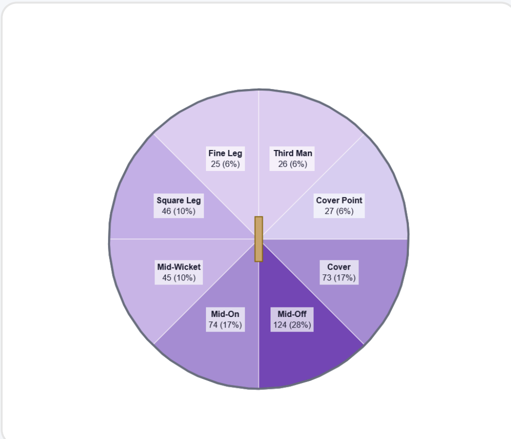
Pitch Maps & Scoring

At the Stumps (wickets)



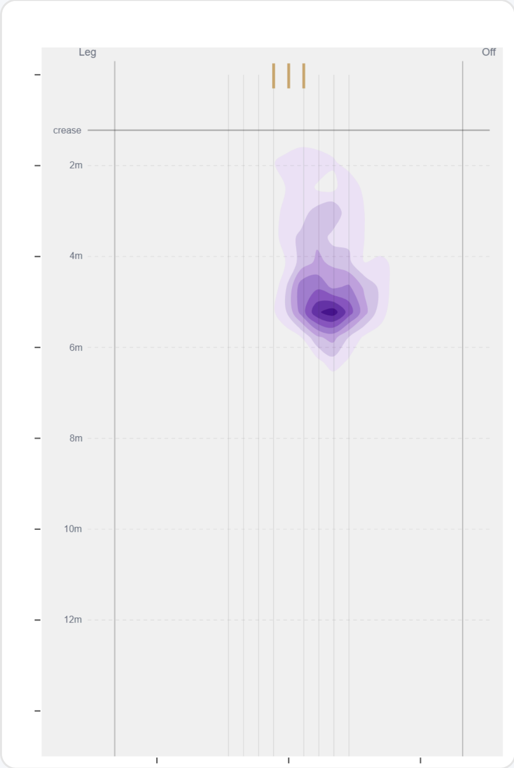
Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Where They're Scored Off



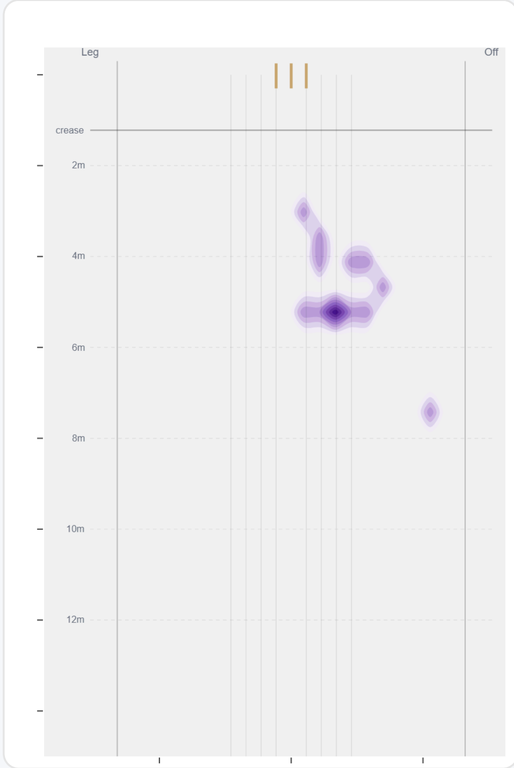
Runs come mostly on the off side (66%).

Where They Pitch It



Pitches it full wide outside off most often (13%); rarely drops short (0%).

Where Wickets Come From

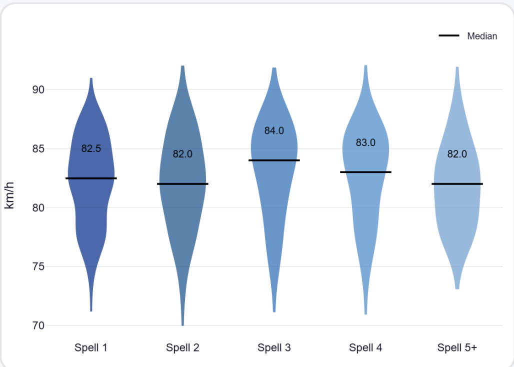


Wickets come mostly from balls pitched full wide outside off, but strikes most often pitching wide outside off.

Speed & Spells

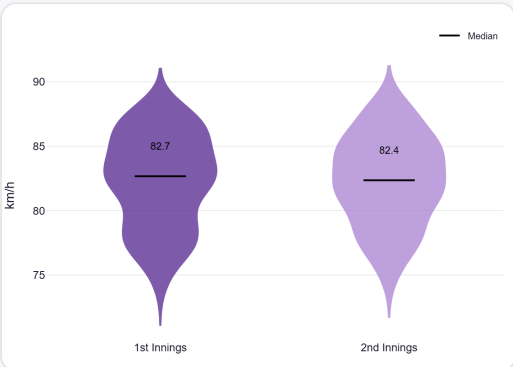
He holds his pace across spells, is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell



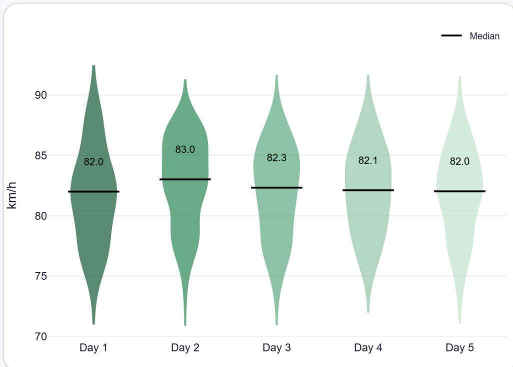
By spell — opening burst vs later spells.

Speed by Innings



1st vs 2nd innings of the match.

Speed by Day



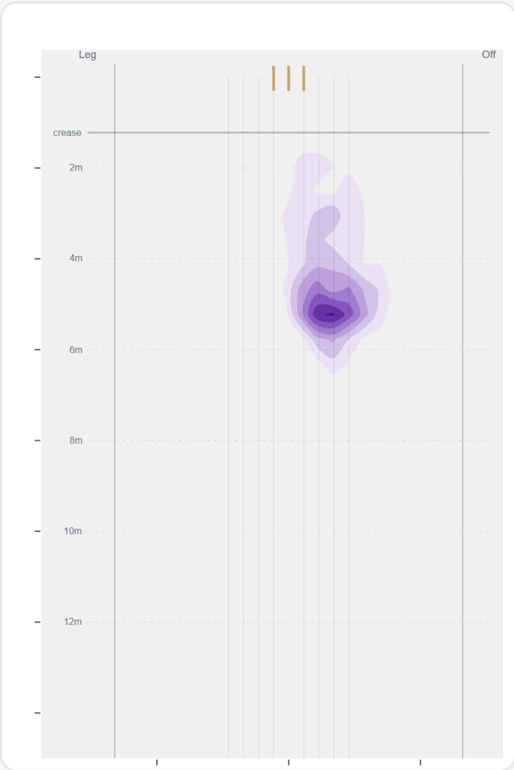
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively over the wicket to left-handers (87%, 616 balls); round the wicket is a rare change-up (13%, 89 balls).

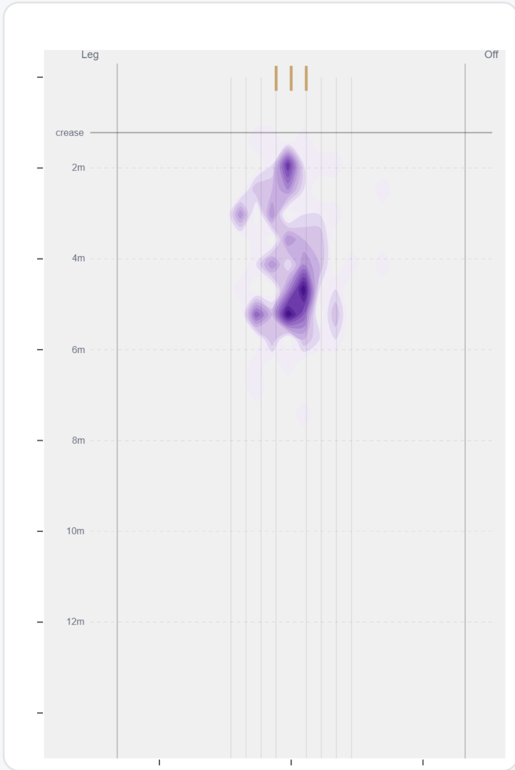
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	616 (87%)	Wide of 6th	4.7 m	0%	3.52	14	48%
Round	89 (13%)	Stumps	4.1 m	0%	4.38	1	55%

Over the Wicket



Where he pitches it from over the wicket (616 balls).

Round the Wicket



Where he pitches it from round the wicket (89 balls).

Sequencing & Over Construction

Consistent with his length (length spread ±1.3 m; more repeatable than 48% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 34 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.8 m	0%	3.87	0.7%
Ball 2	4.5 m	0%	3.07	2.5%
Ball 3	4.6 m	0%	3.75	1.7%
Ball 4	4.9 m	0%	4.26	1.8%
Ball 5	4.5 m	0%	3.85	3.7%
Ball 6	4.5 m	0%	3.00	2.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 75 cm from the middle stump; varies his spot on the crease a lot (more than 95% of left-arm spin). Comes wider round the wicket (58 cm over vs 75 cm round).

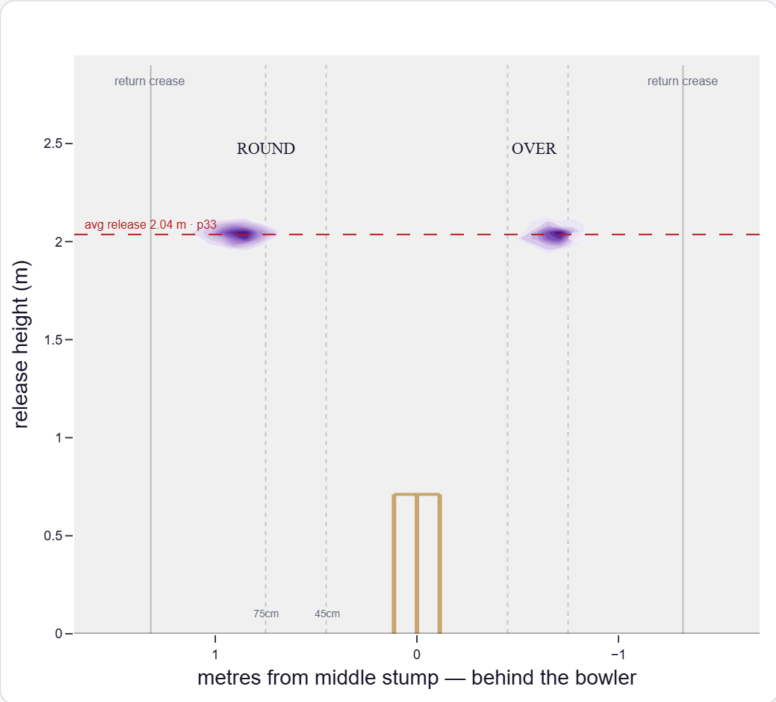
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	24%	531	3.48	6	51.3	88
Wide (>75cm)	76%	1,696	2.77	24	32.6	71

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	20%	0%	84%	16%
Round the wicket	80%	0%	9%	91%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

Not a big spinner — relies on flight, drift and accuracy; extracts steep bounce.

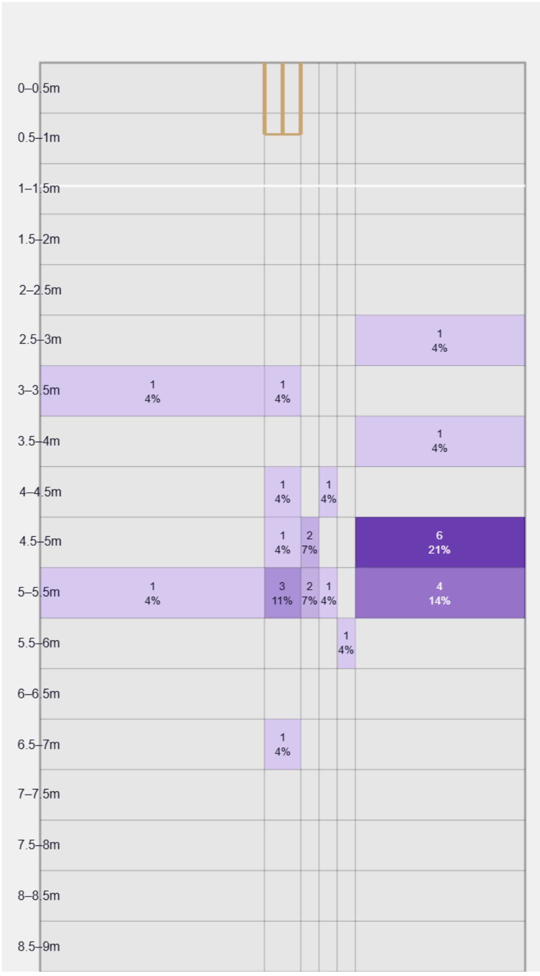
Generates well below avg turn and about average drift for a spin bowler; turns it in more to left-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.57°	42nd pct (about average)	99% away / 1% in
Turn	2.67°	13th pct (well below avg)	0% away / 100% in
Bounce	5.1°	96th pct (well above avg)	—

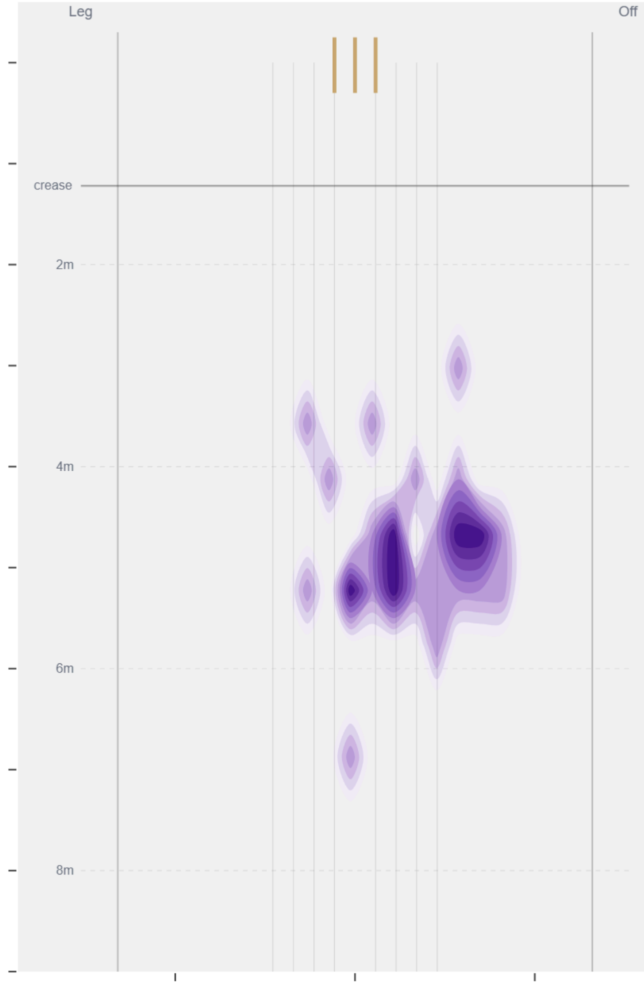
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / Wide of 6th** (29% of play-and-misses). Overall he beats the bat 5.2% of tracked balls (false-shot 11.8%, n=518).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
