## Scouting Summary

### COMMON THEMES

- Right Fast, averaging 135.5 kph (up to 145.3).
- Typical length is **6-7m** (their good length); median 6.6 m.
- Stock ball is **a good length on the stumps, swinging both ways, seaming both ways, passing outside off** (20% of deliveries).
- Goes round the wicket 37% of the time against left-handers.
- Round the wicket** he shifts his pitching line from stumps to wide of 6th.

### BIGGEST THREATS

- Most dangerous length is **Back of Length** (19 wkts, 2.8% adjusted strike).
- Danger pitching line: **6th stump** (round the wicket).
- Takes 16% of wickets pitching **full on the stumps**, over the wicket.
- Beats the bat 14.5% of tracked balls (false-shot 26.4%).
- Most likely to dismiss you **caught** (77% of wickets).
- 43% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 1st, fine leg: deep.

### AREAS TO EXPLOIT

- Concedes most runs pitching **a good length on the stumps** (14% of runs).
- Short ball: 22% of deliveries, economy 3.5 — 24 wkts from 1015 short balls.
- Away from back of length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (47%) — his main scoring release.
- Cash in when he goes **full on the stumps** (economy 3.5, beats the bat only 38%).

Bounce

**P67**

4.2° · vs pace bowlers

Repeatability

**P26**

±1.8 m · vs pace bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 18 in his last 5 Tests vs 24 career).

| Window       | Balls  | Wkts | Avg  | Econ | SR   | False% | Avg speed | Avg length |
|--------------|--------|------|------|------|------|--------|-----------|------------|

**Catches to:** [Keeper 20](#) [Slip: 1st 5](#) [Fine leg: deep 2](#) [Square leg: deep backward 1](#) [Fine leg: regulation 1](#) [Mid off: regulation 1](#)

**Angle & variations:** Round the wicket to LHB (36%), stays over to RHB · slower balls 1.7% (~124 kph)

Share of his 82 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, <**1** = less. Caught is high for everyone — the signal is the over-indexed row.

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

**Stock ball — a good length on the stumps, swinging both ways, seaming both ways, passing outside off (20% of deliveries, economy 1.95). Minor variations: full on the stumps (14%) and a good length outside off (9%).**

| Ball type (pitch length × pitching line)          | Movement                              | %   | Econ | Wkts | Beaten % |
|---------------------------------------------------|---------------------------------------|-----|------|------|----------|
| a good length on the stumps <a href="#">▶</a>     | swinging both ways, seaming both ways | 20% | 1.95 | 8    | 29%      |
| full on the stumps <a href="#">▶</a>              | swinging both ways, seaming both ways | 14% | 3.53 | 13   | 38%      |
| a good length outside off <a href="#">▶</a>       | swinging away, seaming away           | 9%  | 1.41 | 9    | 25%      |
| a good length down the leg side <a href="#">▶</a> | swinging both ways, seaming both ways | 8%  | 2.75 | 3    | 23%      |
| full outside off <a href="#">▶</a>                | swinging both ways, seaming both ways | 8%  | 3.36 | 11   | 29%      |
| a good length wide outside off <a href="#">▶</a>  | swinging away, seaming away           | 8%  | 2.21 | 4    | 21%      |

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

**New ball (≤30 ov)** · 2,288 balls · 39 wkts · econ 2.55

| Top ball type                   | %   | Econ | Wkts |
|---------------------------------|-----|------|------|
| a good length on the stumps     | 22% | 1.59 | 6    |
| full on the stumps              | 16% | 2.99 | 8    |
| a good length down the leg side | 9%  | 2.80 | 1    |
| a good length outside off       | 8%  | 1.44 | 2    |

Most lethal: **full 6th stump** (3.1 wkts/100).  
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

**Old ball (31+ ov)** · 2,248 balls · 43 wkts · econ 3.07

| Top ball type                      | %   | Econ | Wkts |
|------------------------------------|-----|------|------|
| a good length on the stumps        | 18% | 2.41 | 2    |
| full on the stumps                 | 13% | 4.20 | 5    |
| a good length outside off          | 10% | 1.38 | 7    |
| back of a length down the leg side | 8%  | 4.64 | 7    |

Most lethal: **back of length Down leg** (3.2 wkts/100).

Danger Zones (vs left-handers) [▶ watch danger balls](#)

**WICKETS — WHERE MOST CAME FROM**  
**Full on the stumps**  
16% of mapped wickets (13 of 82)

**RUNS — WHERE MOST CONCEDED**  
**A good length on the stumps**  
14% of runs (299 of 2145)

**DANGER LINE**  
**6th stump**  
16 wkts / 485 balls · 3.1% adj (3.3% raw)

**DANGER LENGTH**  
**Back of Length**  
19 wkts / 653 balls · 2.8% adj (2.9% raw)

**MOST LETHAL ZONE (BY RATE)**  
**Back of Length / 6th stump**  
4 wkts / 69 balls · 3.7% adj (5.8% raw) · low sample

Most threatening pitching back of a length on the 6th stump (19 wkts, 2.8% strike). Most wickets come from full on the stumps, while he leaks the most runs a good length on the stumps.

NEW BALL ( $\leq 30$  OV)

**full 6th stump**

most lethal cell · 3.1 wkts/100 · danger length full · 39 wkts off 2,288 balls

OLD BALL (31+ OV)

**back of length Down leg**

most lethal cell · 3.2 wkts/100 · danger length back of length · 43 wkts off 2,248 balls

Match-ups (vs left-handers)

New ball vs old ball

| Split             | Balls | Wkts | Avg  | Econ | SR   | False% | Med length |
|-------------------|-------|------|------|------|------|--------|------------|
| New ball (≤30 ov) | 2,288 | 39   | 24.9 | 2.55 | 58.7 | 25%    | 6.50 m     |
| Old ball (31+ ov) | 2,248 | 43   | 26.7 | 3.07 | 52.3 | 28%    | 6.69 m     |

By batting position

| Split           | Balls | Wkts | Avg  | Econ | SR   | False% | Med length |
|-----------------|-------|------|------|------|------|--------|------------|
| Top order (1–3) | 2,608 | 41   | 26.3 | 2.48 | 63.6 | 25%    | 6.48 m     |
| Middle (4–7)    | 1,371 | 23   | 30.5 | 3.07 | 59.6 | 24%    | 6.64 m     |
| Tail (8–11)     | 557   | 18   | 19.1 | 3.69 | 30.9 | 38%    | 6.99 m     |

Bangs it in more with the old ball (7%→15% short); more short balls at the tail (23% vs 9% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

52% of his runs come in boundaries — a boundary every 17 balls; most runs go to the off side (47%); the drive hurts most (26 fours/sixes at 2.7 runs/ball).

Direction from ball-tracking (all scoring shots); shot type recorded on 29% of scoring balls (290/1000) — groups with <5 balls omitted.

Pitch Maps & Scoring

## Where They Pitch It

Pitches it a good length on the stumps most often (20%); mixes in the short ball (22%).

## Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps, but strikes most often pitching on the 6th stump.

## Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and is as quick on the final day as day one.

### Speed by Spell

By spell — opening burst vs later spells.

### Speed by Innings

1st vs 2nd innings of the match.

### Speed by Day

By match day — fatigue across the game.

## Over vs Round the Wicket (vs left-handers)

**Round the wicket his pitching line moves from stumps to wide of 6th — economy 2.94→2.58, a wicket every 59→50 balls (over→round).**

| Angle | Balls      | Pitch line  | Length | Short % | Econ | Wkts | Bdry % |
|-------|------------|-------------|--------|---------|------|------|--------|
| Over  | 2871 (63%) | Stumps      | 6.6 m  | 11%     | 2.94 | 49   | 55%    |
| Round | 1665 (37%) | Wide of 6th | 6.6 m  | 14%     | 2.58 | 33   | 46%    |

### Over the Wicket

Where he pitches it from over the wicket (2871 balls).

### Round the Wicket

Where he pitches it from round the wicket (1665 balls).

## Sequencing & Over Construction

**Moderately consistent with his length (length spread  $\pm 2.1$  m; more repeatable than 26% of pace bowlers); tends to bang it in later in the over (short 9%→14% by the 5th–6th ball); and holds the same crease position through the over.**

**Uses the short ball as a one-off — follows it with a fuller length 53% of the time; sets batters up then pitches fuller for the wicket (42% of dismissals come off a ball fuller than the one before); and tends to strike with a straighter ball after working across the batter (35% straighter than the ball before).**

Across 252 dismissals, the wicket ball lands about 63 cm fuller than the ball before it — that's the change that brings the wicket.

| Ball in over | Median length | Short % | Econ | Wkt % |
|--------------|---------------|---------|------|-------|
| Ball 1       | 6.5 m         | 6%      | 2.79 | 1.3%  |
| Ball 2       | 6.5 m         | 11%     | 2.82 | 1.7%  |
| Ball 3       | 6.5 m         | 12%     | 2.93 | 2.4%  |
| Ball 4       | 6.7 m         | 16%     | 2.67 | 2.7%  |
| Ball 5       | 6.7 m         | 14%     | 2.79 | 1.2%  |
| Ball 6       | 6.6 m         | 13%     | 2.86 | 1.6%  |

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

## Release Point & Crease Use

**A high release point (taller than 96% of right-arm pace); releases about 60 cm from the middle stump. Comes wider round the wicket (60 cm over vs 86 cm round).**

| Crease position  | % balls | Balls | Econ | Wkts | Avg  | SR |
|------------------|---------|-------|------|------|------|----|
| Tight (<45cm)    | 1%      | 95    | 4.04 | 2    | 32.0 | 48 |
| Standard (45–75) | 79%     | 5,848 | 2.86 | 127  | 21.9 | 46 |
| Wide (>75cm)     | 20%     | 1,463 | 2.68 | 33   | 19.8 | 44 |

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

| Angle            | Balls | Tight | Standard | Wide |
|------------------|-------|-------|----------|------|
| Over the wicket  | 88%   | 1%    | 89%      | 9%   |
| Round the wicket | 12%   | 0%    | 6%       | 94%  |

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

### Release Point (behind the bowler)

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

## Movement (vs the average pace bowler · vs left-handers)

**A hit-the-deck bowler who bangs it into a hard length for steep bounce and seams it around.**

Generates above avg seam and about average swing for a pace bowler; seams it away more to left-hand batters (58%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=582) 50% away / 50% in; old ball (≥40 ov, n=507) 70% away / 30% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

| Movement | Avg   | vs average               | Direction (vs left-handers) |
|----------|-------|--------------------------|-----------------------------|
| Swing    | 0.77° | 40th pct (about average) | 61% away / 39% in           |
| Seam     | 0.61° | 64th pct (above avg)     | 59% away / 41% in           |
| Bounce   | 4.2°  | 67th pct (above avg)     | —                           |

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (26% of play-and-misses). Overall he beats the bat 14.5% of tracked balls (false-shot 26.4%, n=2,449).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
