Scouting Summary

COMMON THEMES

- Left Fast, averaging 141.2 kph (up to 151.0).
- Typical length is **6-7m** (their good length); median 6.6 m.
- Stock ball is a **good length outside off, swinging both ways, seaming both ways, passing outside off** (17% of deliveries).
- Goes round the wicket 5% of the time against left-handers.

BIGGEST THREATS

- Most dangerous length is **Full** (56 wkts, 3.0% adjusted strike).
- Danger pitching line: **Stumps** (over the wicket).
- Takes 18% of wickets pitching **full on the stumps**, over the wicket.
- Beats the bat 18.3% of tracked balls (false-shot 30.4%).
- Most likely to dismiss you **caught** (57% of wickets).
- 50% of catches are behind the wicket (keeper / slips / gully); most often to keeper, gully, slip: 2nd.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (15% of runs).
- Short ball: 29% of deliveries, economy 3.1 — 31 wkts from 1698 short balls.
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (47%) — his main scoring release.
- Cash in when he goes **full on the stumps** (economy 5.1, beats the bat only 25%).

±2.1 m · vs pace bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 20 in his last 5 Tests vs 26 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	919	31	19.6	3.97	29.6	78%	142	7.02 m

How he gets you out	His %	Base	Index
Caught	57%	68%	0.84×
Bowled	26%	18%	1.43×
LBW	18%	14%	1.22×

Share of his 137 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 24](#) [Gully 6](#) [Slip: 2nd 5](#) [Slip: 1st 3](#)

[Square leg: deep backward 2](#) [Point: regulation 2](#)

Angle & variations: Round the wicket to RHB (27%), stays over to LHB · slower balls 1.8% (~128 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, swinging away, reverses in, seaming both ways, passing outside off (17% of deliveries, economy 2.22). Minor variations: full on the stumps (12%) and full outside off (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	swinging away, reverses in, seaming both ways	17%	2.22	19	32%
full on the stumps ▶	swinging away, reverses in, seaming away	12%	5.13	32	25%
full outside off ▶	swinging away, reverses in, seaming both ways	11%	4.12	19	31%
a good length on the stumps ▶	swinging away, reverses in, seaming away	9%	3.69	9	30%
a good length in the channel ▶	swinging away, reverses in, seaming away	8%	1.69	11	34%
full in the channel ▶	swinging away, reverses in, seaming both ways	7%	3.65	9	26%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 3,135 balls · 74 wkts · econ 3.39

Top ball type	%	Econ	Wkts
a good length outside off	18%	2.15	10
full on the stumps	12%	5.83	16
a good length on the stumps	11%	3.63	7
full outside off	10%	4.07	11

Most lethal: **yorker/full Stumps** (3.9 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 2,762 balls · 63 wkts · econ 3.53

Top ball type	%	Econ	Wkts
a good length outside off	16%	2.30	9
full on the stumps	12%	4.30	16
full outside off	11%	4.16	8
back of a length outside off	7%	4.46	3

Most lethal: **full Stumps** (4.4 wkts/100).

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
Full on the stumps
18% of mapped wickets (24 of 134)

RUNS — WHERE MOST CONCEDED
Full on the stumps
15% of runs (510 of 3404)

DANGER LINE
Stumps
45 wkts / 1,427 balls · 3.1% adj (3.2% raw)

DANGER LENGTH
Full
56 wkts / 1,827 balls · 3.0% adj (3.1% raw)

MOST LETHAL ZONE (BY RATE)
Yorker/Full / Stumps
8 wkts / 160 balls · 4.1% adj (5.0% raw)

Most threatening pitching full on the stumps (56 wkts, 3.0% strike). Most wickets come from full on the stumps, while he leaks the most runs full on the stumps.

Zone shares are over his **mapped** wickets — 3 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

NEW BALL (≤ 30 OV)

yorker/full Stumps

most lethal cell · 3.9 wkts/100 · danger length yorker/full · 74 wkts off 3,135 balls

OLD BALL (31+ OV)

full Stumps

most lethal cell · 4.4 wkts/100 · danger length full · 63 wkts off 2,762 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	3,135	74	23.9	3.39	42.4	29%	6.49 m
Old ball (31+ ov)	2,762	63	25.8	3.53	43.8	32%	6.73 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	3,318	68	27.6	3.40	48.8	27%	6.51 m
Middle (4–7)	1,697	40	26.2	3.71	42.4	30%	6.83 m
Tail (8–11)	882	29	16.1	3.18	30.4	42%	6.58 m

Bangs it in more with the old ball (7%→16% short); more short balls at the tail (20% vs 9% to the top 3); more yorkers/full at the tail (22%).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

53% of his runs come in boundaries — a boundary every 13 balls; most runs go to the off side (47%); runs come mostly by working him around (48% of runs).

BOUNDARY %
53%
runs in 4s/6s

ROTATED %

Direction from ball-tracking (all scoring shots); shot type recorded on 46% of scoring balls (732/1585) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the stumps most often (9%); drops short often (28%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps, but strikes most often pitching on the stumps.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively over the wicket to left-handers (95%, 5,625 balls); round the wicket is a rare change-up (5%, 272 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	5625 (95%)	Stumps	6.5 m	10%	3.47	129	53%
Round	272 (5%)	Down leg	9.9 m	47%	3.20	8	48%

Over the Wicket

Where he pitches it from over the wicket (5625 balls).

Round the Wicket

Where he pitches it from round the wicket (272 balls).

Sequencing & Over Construction

Variable with his length (length spread ± 2.5 m; more repeatable than 0% of pace bowlers); tends to bang it in later in the over (short 10% $\rightarrow$ 15% by the 5th–6th ball); and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 39% of the time after banging one in; sets batters up then pitches fuller for the wicket (44% of dismissals come off a ball fuller than the one before); and tends to strike with a straighter ball after working across the batter (38% straighter than the ball before).

Across 351 dismissals, the wicket ball lands about 76 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	6.5 m	8%	3.98	2.9%
Ball 2	6.8 m	11%	3.36	2.1%
Ball 3	6.7 m	10%	3.59	2.3%
Ball 4	6.5 m	13%	3.35	1.5%
Ball 5	6.6 m	16%	3.23	3.0%
Ball 6	6.5 m	13%	3.15	2.2%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 73% of left-arm pace); releases tight to the stumps (31 cm out, tighter than 96% of left-arm pace). Comes wider round the wicket (31 cm over vs 119 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	76%	8,475	3.44	201	24.2	42
Standard (45–75)	5%	563	3.86	12	30.2	47
Wide (>75cm)	19%	2,087	3.59	54	23.1	39

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	81%	94%	6%	0%
Round the wicket	19%	2%	0%	98%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A swing bowler who swings it away with the new ball (60%) and reverses it back in when it's old (70%); skids through at a lower trajectory.

Generates about average seam and above avg swing for a pace bowler; seams it away more to left-hand batters (61%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=1276) 60% away / 40% in; old ball (≥40 ov, n=858) 30% away / 70% in — the swing direction reverses with the old ball.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	1.00°	74th pct (above avg)	46% away / 54% in
Seam	0.55°	40th pct (about average)	62% away / 38% in
Bounce	3.7°	16th pct (well below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 5th stump** (11% of play-and-misses). Overall he beats the bat 18.3% of tracked balls (false-shot 30.4%, n=3,229).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
