Scouting Summary

COMMON THEMES

- Off Spin, averaging 88.5 kph (up to 96.3).
- Typical length is **4-5m** (their good length); median 4.6 m.
- Stock ball is **full on the stumps, turning away, drifting in, hitting the stumps** (33% of deliveries).
- Goes round the wicket 97% of the time against left-handers.
- Turns it 4.1° on average; 25% of balls turn ≥5°.

BIGGEST THREATS

- Most dangerous length is **Full** (142 wks, 1.9% adjusted strike).
- Danger pitching line: **Wide of 6th** (round the wicket).
- Takes 30% of wickets pitching **full on the stumps**, round the wicket.
- Beats the bat 11.9% of tracked balls (false-shot 22.8%).
- Most likely to dismiss you **caught** (64% of wickets).
- 15% of catches are behind the wicket (keeper / slips / gully); most often to slip: 1st, keeper, mid on: regulation.
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (23% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (50%) — his main scoring release.
- Cash in when he goes **good length outside off** (economy 4.1, beats the bat only 17%).

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 29 last 5 vs 30 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	729	14	28.6	3.29	52.1	70%	88	4.77 m
Career	34,828	567	30.1	2.94	61.4	21%	88	4.62 m

How he gets you out	His %	Base	Index
Caught	64%	59%	1.09×
LBW	16%	20%	0.80×
Bowled	13%	17%	0.77×
Stumped	7%	4%	1.58×

Share of his 200 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: Slip: 1st 11 Keeper 6 Mid on: regulation 6
Mid off: regulation 2 Point: silly 2 Slip: 2nd 2

Angle & variations: Uses round the wicket to both (LHB 96% · RHB 27%)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps, turning away, drifting in, hitting the stumps (33% of deliveries, economy 2.00). Minor variations: full in the channel (15%) and full outside off (14%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	turning away, drifting in	33%	2.00	60	24%
full in the channel ▶	turning away, drifting in	15%	1.94	37	24%
full outside off ▶	turning away, drifting in	14%	3.05	22	22%
a good length outside off ▶	turning away, drifting in	11%	4.07	16	17%
a good length in the channel ▶	turning away, drifting in	8%	2.44	25	24%
a good length on the stumps ▶	turning away, drifting in	7%	2.30	10	27%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 3,713 balls · 54 wkts · econ 2.41

Top ball type	%	Econ	Wkts
full on the stumps	35%	1.84	20
full in the channel	16%	1.99	10
full outside off	12%	2.73	3
a good length outside off	11%	4.16	4

Most lethal: **good length 4th stump** (2.1 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 7,345 balls · 146 wkts · econ 2.72

Top ball type	%	Econ	Wkts
full on the stumps	32%	2.10	40
full in the channel	15%	1.92	27
full outside off	15%	3.18	19
a good length outside off	12%	4.02	12

Most lethal: **full Wide of 6th** (4.6 wkts/100).

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM

Full on the stumps

30% of mapped wickets (60 of 200)

RUNS — WHERE MOST CONCEDED

Full on the stumps

23% of runs (1081 of 4787)

DANGER LINE

Wide of 6th

16 wkts / 476 balls · 3.1% adj (3.4% raw)

DANGER LENGTH

Full

142 wkts / 7,529 balls · 1.9% adj (1.9% raw)

MOST LETHAL ZONE (BY RATE)

Full / Wide of 6th

13 wkts / 288 balls · 3.9% adj (4.5% raw)

Most threatening pitching full wide outside off (142 wkts, 1.9% strike). Most wickets come from full on the stumps, while he leaks the most runs full on the stumps.

NEW BALL (≤ 30 OV)

good length 4th stump

most lethal cell · 2.1 wkts/100 · danger length full · 54 wkts off 3,713 balls

OLD BALL (31+ OV)

full Wide of 6th

most lethal cell · 4.6 wkts/100 · danger length full · 146 wkts off 7,345 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	3,713	54	27.7	2.41	68.8	24%	4.60 m
Old ball (31+ ov)	7,345	146	22.8	2.72	50.3	22%	4.55 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	4,598	64	29.2	2.44	71.8	21%	4.57 m
Middle (4–7)	4,479	69	30.4	2.81	64.9	22%	4.55 m
Tail (8–11)	1,979	67	12.8	2.60	29.5	28%	4.61 m

Scoring Profile (vs left-handers)

51% of his runs come in boundaries — a boundary every 20 balls; most runs go to the leg side (50%); the sweep hurts most (93 fours/sixes at 2.7 runs/ball).

BOUNDARY %
51%

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Sweep	213	577	33%	93	2.71
Drive	213	440	25%	52	2.07
Work/Nudge	229	323	19%	17	1.41
Cut	112	233	13%	33	2.08
Ramp/Scoop	45	100	6%	12	2.22
Slog	10	43	2%	8	4.30
Pull/Hook	5	12	1%	1	2.40

Direction from ball-tracking (all scoring shots); shot type recorded on 37% of scoring balls (884/2417) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the stumps most often (31%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps, but strikes most often pitching wide outside off.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively round the wicket to left-handers (97%, 10,679 balls); over the wicket is a rare change-up (3%, 379 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	379 (3%)	Down leg	4.9 m	0%	2.25	8	31%
Round	10679 (97%)	Stumps	4.6 m	0%	2.63	192	51%

Over the Wicket

Where he pitches it from over the wicket (379 balls).

Round the Wicket

Where he pitches it from round the wicket (10679 balls).

Sequencing & Over Construction

Relentlessly consistent — repeats his length ball after ball (length spread ± 0.9 m; more repeatable than 85% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Takes his wickets with the stock ball rather than obvious set-ups.

Across 465 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.5 m	0%	2.44	1.9%
Ball 2	4.6 m	0%	2.68	1.9%
Ball 3	4.6 m	0%	2.58	1.5%
Ball 4	4.6 m	0%	2.73	1.7%
Ball 5	4.6 m	0%	2.71	2.1%
Ball 6	4.6 m	0%	2.56	1.8%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 72% of right-arm spin); releases about 80 cm from the middle stump.

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	23%	3,689	2.99	67	27.4	55
Wide (>75cm)	77%	12,284	2.83	193	30.1	64

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	49%	0%	21%	79%
Round the wicket	51%	0%	25%	74%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A big turner of the ball; skids it on with lower bounce; gets sharp drift in the air.

Generates above avg turn and above avg drift for a spin bowler; turns it away more to left-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.79°	66th pct (above avg)	4% away / 96% in
Turn	4.23°	74th pct (above avg)	100% away / 0% in
Bounce	4.0°	21st pct (below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beats the bat most at **Full / Stumps** (20% of play-and-misses). Overall he beats the bat 11.9% of tracked balls (false-shot 22.8%, n=5,328).

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
