Scouting Summary

COMMON THEMES

- Right Fast, averaging 137.7 kph (up to 146.9).
- Typical length is **6-7m** (their good length); median 7.4 m.
- Stock ball is a **good length wide outside off, seaming away, swinging in, passing outside off** (16% of deliveries).
- Goes round the wicket 59% of the time against left-handers.
- Round the wicket** he shifts his pitching line from down leg to wide of 6th.

BIGGEST THREATS

- Most dangerous length is **Short** (4 wkts, 2.5% adjusted strike).
- Danger pitching line: **6th stump** (round the wicket).
- Takes 14% of wickets pitching **back of a length wide outside off**, round the wicket.
- Beats the bat 13.9% of tracked balls (false-shot 26.1%).
- Most likely to dismiss you **caught** (80% of wickets).
- 48% of catches are behind the wicket (keeper / slips / gully); most often to keeper, gully, slip: 2nd.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (12% of runs).
- Short ball: 39% of deliveries, economy 3.0 — 38 wkts from 1748 short balls.
- Away from short, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (46%) — his main scoring release.

Repeatability

P25

±1.8 m · vs pace bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 16 in his last 5 Tests vs 21 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	775	21	16.4	2.66	36.9	73%	135	7.56 m

Angle & variations: Round the wicket to LHB (59%), stays over to RHB · slower balls 2.2% (~120 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, seaming away, swinging in, passing outside off (16% of deliveries, economy 2.20). Minor variations: a good length outside off (13%) and a good length on the stumps (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	seaming away, swinging in	16%	2.20	10	24%
a good length outside off ▶	seaming away, swinging in	13%	2.26	13	28%
a good length on the stumps ▶	seaming both ways, swinging both ways	11%	1.87	7	28%
back of a length wide outside off ▶	seaming both ways, swinging both ways	9%	3.04	12	24%
back of a length down the leg side ▶	seaming both ways, swinging both ways	9%	3.26	9	18%
a good length down the leg side ▶	seaming both ways, swinging in	8%	2.38	4	32%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 2,003 balls · 34 wkts · econ 2.62

Top ball type	%	Econ	Wkts
a good length wide outside off	17%	1.67	6
a good length on the stumps	14%	1.67	5
a good length outside off	12%	1.99	3
a good length down the leg side	11%	2.35	1

Most lethal: **full 6th stump** (3.0 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 2,463 balls · 52 wkts · econ 3.09

Top ball type	%	Econ	Wkts
a good length wide outside off	16%	2.66	4
a good length outside off	15%	2.44	10
back of a length wide outside off	12%	3.03	10
back of a length down the leg side	10%	3.63	5

Most lethal: **short Wide of 6th** (3.5 wkts/100).

Danger Zones (vs left-handers) [▶ watch danger balls](#)

12% of runs (269 of 2209)

DANGER LINE
6th stump
15 wkts / 686 balls · 2.2% adj (2.2% raw)

DANGER LENGTH
Short
4 wkts / 138 balls · 2.5% adj (2.9% raw) · low sample

MOST LETHAL ZONE (BY RATE)
Back of Length / 5th stump
3 wkts / 40 balls · 3.8% adj (7.5% raw) · low sample

Most threatening pitching short on the 6th stump (4 wkts, 2.5% strike). Most wickets come from back of a length wide outside off, while he leaks the most runs a good length wide outside off.

NEW BALL (≤ 30 OV)

full 6th stump

most lethal cell · 3.0 wkts/100 · danger length back of length · 34 wkts off 2,003 balls

OLD BALL (31+ OV)

short Wide of 6th

most lethal cell · 3.5 wkts/100 · danger length short · 52 wkts off 2,463 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	2,003	34	25.7	2.62	58.9	25%	7.06 m
Old ball (31+ ov)	2,463	52	24.4	3.09	47.4	27%	7.77 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	2,335	39	25.3	2.53	59.9	24%	7.11 m
Middle (4–7)	1,512	27	30.7	3.29	56.0	26%	7.60 m
Tail (8–11)	619	20	16.2	3.15	30.9	32%	9.03 m

Bangs it in more with the old ball (8%→29% short); more short balls at the tail (43% vs 15% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

51% of his runs come in boundaries — a boundary every 17 balls; most runs go to the off side (46%); the drive hurts most (38 fours/sixes at 2.5 runs/ball).

Pull/Hook	89	193	21%	25	2.17
Cut	23	74	8%	17	3.22

Direction from ball-tracking (all scoring shots); shot type recorded on 52% of scoring balls (549/1056) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Runs come mostly on the leg side (50%).

Where They Pitch It

Pitches it a good length wide outside off most often (16%); drops short often (39%).

Where Wickets Come From

Wickets come mostly from balls pitched back of a length wide outside off, but strikes most often pitching on the 6th stump.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to wide of 6th — economy 2.73→2.97, a wicket every 59→48 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	1815 (41%)	Down leg	7.4 m	21%	2.73	31	52%
Round	2651 (59%)	Wide of 6th	7.5 m	21%	2.97	55	51%

Over the Wicket

Where he pitches it from over the wicket (1815 balls).

Round the Wicket

Where he pitches it from round the wicket (2651 balls).

Sequencing & Over Construction

Variable with his length (length spread ± 2.3 m; more repeatable than 25% of pace bowlers); tends to bang it in later in the over (short 17%→24% by the 5th–6th ball); and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 29% of the time after banging one in.

Across 267 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.5 m	17%	3.00	1.9%
Ball 2	7.4 m	16%	2.96	2.5%
Ball 3	7.4 m	20%	2.60	1.8%
Ball 4	7.4 m	24%	2.92	2.0%
Ball 5	7.5 m	27%	3.09	2.4%
Ball 6	7.3 m	21%	2.73	1.1%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 90% of right-arm pace); releases about 71 cm from the middle stump; varies his spot on the crease a lot (more than 86% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	52%	5,181	2.88	114	21.9	45
Wide (>75cm)	48%	4,837	2.88	108	21.5	45

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	82%	0%	62%	38%
Round the wicket	18%	0%	8%	92%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce and seams it around.

Generates above avg seam and well below avg swing for a pace bowler; seams it away more to left-hand batters (60%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=374) 21% away / 79% in; old ball (≥40 ov, n=490) 39% away / 61% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.50°	8th pct (well below avg)	32% away / 68% in
Seam	0.60°	62nd pct (above avg)	61% away / 39% in
Bounce	4.2°	72nd pct (above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beats the bat most at **Good Length / Wide of 6th** (17% of play-and-misses). Overall he beats the bat 13.9% of tracked balls (false-shot 26.1%, n=2,808).

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
