Scouting Summary

- COMMON THEMES**
- Right Fast, averaging 135.2 kph (up to 140.6).
 - Typical length is **7-8m** (their good length); median 7.4 m.
 - Stock ball is **a good length outside off, seaming both ways, climbing over off** (38% of deliveries).
 - Goes round the wicket 80% of the time against left-handers.
 - Round the wicket** he shifts his pitching line from down leg to 6th stump.

- BIGGEST THREATS**
- Most dangerous length is **Full** (5 wkts, 3.1% adjusted strike).
 - Danger pitching line: **Down leg**.
 - Takes 22% of wickets pitching **a good length on the 6th stump**.
 - Beats the bat 18.3% of tracked balls (false-shot 36.3%).
 - Most likely to dismiss you **caught** (67% of wickets).
 - 75% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 3rd, gully.

- AREAS TO EXPLOIT**
- Concedes most runs pitching **a good length on the 5th stump** (14% of runs).
 - Short ball: 30% of deliveries, economy 3.0 — 5 wkts from 281 short balls.
 - Away from full, the wicket threat drops off — look to score in the less-productive lengths.
 - Most of his runs leak through the leg side (54%) — his main scoring release.
 - Cash in when he goes **full outside off** (economy 5.6, beats the bat only 28%).

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 25 in his last 5 Tests vs 18 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	959	20	24.7	3.09	48.0	75%	135	7.48 m
Career	3,191	82	18.2	2.81	38.9	32%	135	7.44 m

How he gets you out	His %	Base	Index
Caught	67%	68%	0.99×
Bowled	22%	18%	1.24×
LBW	11%	14%	0.78×

Share of his 18 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 5](#) [Slip: 3rd 2](#) [Gully 1](#) [Third man: fine 1](#)

[Mid on: wide 1](#) [Slip: 2nd 1](#)

Angle & variations: Round the wicket to LHB (80%), stays over to RHB · slower balls 1.6% (~127 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, seaming both ways, climbing over off (38% of deliveries, economy 1.87). Minor variations: a good length wide outside off (15%) and a good length down the leg side (10%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	seaming both ways	38%	1.87	4	41%
a good length wide outside off ▶	seaming both ways, swinging away	15%	1.69	2	39%
a good length down the leg side ▶	seaming both ways	10%	2.05	4	36%
full outside off ▶	seaming both ways, swinging away	8%	5.61	3	28%
a good length on the stumps ▶	seaming both ways, swinging away	7%	1.64	0	55%
a good length in the channel ▶	seaming both ways, swinging both ways	6%	3.46	2	22%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 485 balls · 11 wkts · econ 2.80

Top ball type	%	Econ	Wkts
a good length outside off	37%	2.00	2
a good length wide outside off	15%	1.61	1
full outside off	11%	5.54	1
a good length down the leg side	11%	1.62	4

Most lethal: **good length Down leg** (4.4 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 439 balls · 7 wkts · econ 2.69

Top ball type	%	Econ	Wkts
a good length outside off	38%	1.72	2
a good length wide outside off	16%	1.77	1
a good length down the leg side	8%	2.67	0
a good length in the channel	8%	3.82	1

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length on the 6th stump
22% of mapped wickets (4 of 18)

RUNS — WHERE MOST CONCEDED
A good length on the 5th stump
14% of runs (62 of 428)

DANGER LINE
Down leg
5 wkts / 101 balls · 3.6% adj (5.0% raw)

DANGER LENGTH
Full
5 wkts / 129 balls · 3.1% adj (3.9% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / Down leg
4 wkts / 88 balls · 3.3% adj (4.5% raw) · low sample

Most threatening pitching full down the leg side (5 wkts, 3.1% strike). Most wickets come from a good length on the 6th stump, while he leaks the most runs a good length on the 5th stump.

NEW BALL (≤ 30 OV)

good length Down leg

most lethal cell · 4.4 wkts/100 · danger length full · 11 wkts off 485 balls

OLD BALL (31+ OV)

—

· danger length good length · 7 wkts off 439 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	485	11	20.5	2.80	44.1	34%	7.33 m
Old ball (31+ ov)	439	7	28.1	2.69	62.7	39%	7.46 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	372	8	18.9	2.44	46.5	36%	7.31 m
Middle (4–7)	425	7	32.7	3.23	60.7	34%	7.46 m
Tail (8–11)	127	3	14.3	2.03	42.3	45%	7.53 m

Scoring Profile (vs left-handers)

50% of his runs come in boundaries — a boundary every 18 balls; most runs go to the leg side (54%); the drive hurts most (28 fours/sixes at 3.0 runs/ball).

BOUNDARY %
50%
runs in 4s/6s

ROTATED %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	100	154	42%	8	1.54
Drive	50	151	41%	28	3.02
Cut	11	33	9%	7	3.00
Pull/Hook	6	17	5%	3	2.83

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (209/209) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around 6th stump and moves it back.

Runs come mostly on the leg side (62%).

Where They Pitch It

Pitches it a good length on the 6th stump most often (20%); drops short often (30%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 6th stump, but strikes most often pitching down the leg side.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and loses ~1.6 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to 6th stump — economy 2.39→2.83, a wicket every 36→57 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	181 (20%)	Down leg	7.6 m	2%	2.39	5	61%
Round	743 (80%)	6th stump	7.4 m	4%	2.83	13	48%

Over the Wicket

Where he pitches it from over the wicket (181 balls).

Round the Wicket

Where he pitches it from round the wicket (743 balls).

Sequencing & Over Construction

Metronomic — hammers the same length repeatedly, little to feast on (length spread ± 1.4 m; more repeatable than 93% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 13% of the time after banging one in; sets batters up then pitches fuller for the wicket (37% of dismissals come off a ball fuller than the one before).

Across 65 dismissals, the wicket ball lands about 41 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.5 m	3%	2.63	2.7%
Ball 2	7.5 m	3%	2.76	2.0%
Ball 3	7.4 m	4%	2.35	0.7%
Ball 4	7.4 m	6%	2.61	3.7%
Ball 5	7.5 m	4%	3.04	1.9%
Ball 6	7.3 m	1%	3.13	0.6%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases wide of the stumps (83 cm out, wider than 85% of right-arm pace); releases from the same spot almost every ball (steadier than 78% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	25%	786	2.79	15	24.4	52
Wide (>75cm)	75%	2,403	2.82	67	16.8	36

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	77%	0%	11%	89%
Round the wicket	23%	0%	70%	30%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Movement (vs the average pace bowler · vs left-handers)

A seam bowler who moves it both ways (56% away / 44% in); skids through at a lower trajectory.

Generates above avg seam and well below avg swing for a pace bowler; seams it away more to left-hand batters (56%).

Swing by ball age to left-hand batters: new ball (≤ 25 ov, $n=84$) 80% away / 20% in; old ball (≥ 40 ov, $n=122$) 68% away / 32% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.43°	4th pct (well below avg)	72% away / 28% in
Seam	0.63°	76th pct (above avg)	56% away / 44% in
Bounce	3.5°	7th pct (well below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 6th stump** (25% of play-and-misses). Overall he beats the bat 18.3% of tracked balls (false-shot 36.3%, n=540).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
