Scouting Summary

COMMON THEMES

- Right Fast, averaging 135.4 kph (up to 144.1).
- Typical length is **6-7m** (their good length); median 6.6 m.
- Stock ball is **a good length outside off, swinging in, seaming both ways, hitting the top of off** (28% of deliveries).
- Goes round the wicket 1% of the time against right-handers.

BIGGEST THREATS

- Most dangerous length is **Full** (90 wkts, 2.5% adjusted strike).
- Danger pitching line: **4th stump** (over the wicket).
- Takes 18% of wickets pitching **a good length on the 6th stump**, over the wicket.
- Beats the bat 13.0% of tracked balls (false-shot 25.9%).
- Most likely to dismiss you **caught** (69% of wickets).
- 33% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 2nd, slip: 1st.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (16% of runs).
- Short ball: 18% of deliveries, economy 3.3 — 31 wkts from 1977 short balls.
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (50%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 3.7, beats the bat only 38%).

Bowling Fingerprint

Changing (last 3 years vs career): pace down ~2 km/h (now 134); repeatability up; swing down.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 18 in his last 5 Tests vs 24 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, swinging in, seaming both ways, hitting the top of off (28% of deliveries, economy 1.41). Minor variations: full outside off (18%) and a good length wide outside off (18%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	swinging in, seaming both ways	28%	1.41	69	26%
full outside off ▶	swinging in, seaming both ways	18%	2.67	48	30%
a good length wide outside off ▶	swinging in, seaming both ways	18%	2.55	17	22%
full wide outside off ▶	swinging both ways, seaming both ways	10%	3.69	19	38%
full in the channel ▶	swinging in, seaming both ways	5%	3.96	21	24%
back of a length outside off ▶	seaming both ways, swinging in	5%	3.55	7	21%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 4,475 balls · 88 wkts · econ 2.31

Top ball type	%	Econ	Wkts
a good length outside off	31%	1.24	27
full outside off	18%	2.40	21
a good length wide outside off	18%	1.73	9
full wide outside off	10%	3.66	10

Most lethal: **full 4th stump** (3.7 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 6,412 balls · 125 wkts · econ 3.01

Top ball type	%	Econ	Wkts
a good length outside off	27%	1.55	42
full outside off	18%	2.87	27
a good length wide outside off	18%	3.13	8
full wide outside off	10%	3.71	9

Most lethal: **back of length 4th stump** (5.0 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length on the 6th stump

RUNS — WHERE MOST CONCEDED
A good length wide outside off
16% of runs (818 of 4981)

DANGER LINE
4th stump
35 wkts / 1,117 balls · 3.1% adj (3.1% raw)

DANGER LENGTH
Full
90 wkts / 3,655 balls · 2.5% adj (2.5% raw)

MOST LETHAL ZONE (BY RATE)
Back of Length / 4th stump
5 wkts / 55 balls · 4.9% adj (9.1% raw)

Most threatening pitching full in the 4th-stump channel (90 wkts, 2.5% strike). Most wickets come from a good length on the 6th stump, while he leaks the most runs a good length wide outside off.

NEW BALL (≤ 30 OV)

full 4th stump

most lethal cell · 3.7 wkts/100 · danger length full · 88 wkts off 4,475 balls

OLD BALL (31+ OV)

back of length 4th stump

most lethal cell · 5.0 wkts/100 · danger length full · 125 wkts off 6,412 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	4,475	88	19.6	2.31	50.9	26%	6.51 m
Old ball (31+ ov)	6,412	125	25.7	3.01	51.3	26%	6.60 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	4,218	63	25.5	2.29	67.0	27%	6.37 m
Middle (4–7)	5,073	95	25.8	2.90	53.4	23%	6.67 m
Tail (8–11)	1,596	55	16.1	3.32	29.0	34%	6.71 m

Bangs it in more with the old ball (4%→11% short); more short balls at the tail (14% vs 7% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

53% of his runs come in boundaries — a boundary every 17 balls; most runs go to the off side (50%); the drive hurts most (65 fours/sixes at 2.6 runs/ball).

BOUNDARY %

Pull/Hook	84	186	17%	26	2.21
Cut	31	92	8%	18	2.97

Direction from ball-tracking (all scoring shots); shot type recorded on 28% of scoring balls (633/2265) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around 6th stump and moves it back.

Runs come mostly on the off side (52%).

Where They Pitch It

Pitches it a good length wide outside off most often (17%); mixes in the short ball (18%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 6th stump, but strikes most often pitching in the 4th-stump channel.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (99%, 10,794 balls); round the wicket is a rare change-up (1%, 93 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	10794 (99%)	Wide of 6th	6.6 m	8%	2.71	212	53%
Round	93 (1%)	Down leg	7.5 m	30%	3.74	1	41%

Over the Wicket

Where he pitches it from over the wicket (10794 balls).

Round the Wicket

Where he pitches it from round the wicket (93 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ± 2.0 m; more repeatable than 26% of pace bowlers); tends to bang it in later in the over (short 6% $\rightarrow$ 10% by the 5th–6th ball); and holds the same crease position through the over.

Uses the short ball as a one-off — follows it with a fuller length 53% of the time; sets batters up then pitches fuller for the wicket (42% of dismissals come off a ball fuller than the one before); and tends to strike with a straighter ball after working across the batter (35% straighter than the ball before).

Across 252 dismissals, the wicket ball lands about 63 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	6.5 m	6%	3.01	1.8%
Ball 2	6.5 m	5%	2.50	2.3%
Ball 3	6.5 m	8%	2.60	2.1%
Ball 4	6.7 m	12%	2.96	1.8%
Ball 5	6.7 m	12%	2.50	2.3%
Ball 6	6.5 m	9%	2.82	1.5%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 96% of right-arm pace); releases about 60 cm from the middle stump. Comes wider round the wicket (60 cm over vs 86 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	1%	95	4.04	2	32.0	48
Standard (45–75)	79%	5,848	2.86	127	21.9	46
Wide (>75cm)	20%	1,463	2.68	33	19.8	44

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	88%	1%	89%	9%
Round the wicket	12%	0%	6%	94%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce and seams it around.

Generates above avg seam and about average swing for a pace bowler; seams it in more to right-hand batters (51%).

Swing by ball age to right-hand batters: new ball (≤25 ov, n=844) 31% away / 69% in; old ball (≥40 ov, n=1350) 27% away / 73% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.77°	40th pct (about average)	29% away / 71% in
Seam	0.61°	64th pct (above avg)	48% away / 52% in
Bounce	4.2°	67th pct (above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 6th stump** (24% of play-and-misses). Overall he beats the bat 13.0% of tracked balls (false-shot 25.9%, n=5,137).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
