Scouting Summary

COMMON THEMES

- Right Fast, averaging 137.9 kph (up to 147.9).
- Typical length is **7-8m** (their good length); median 7.3 m.
- Stock ball is **a good length outside off, seaming both ways, swinging both ways, hitting the top of off** (31% of deliveries).
- Goes round the wicket 2% of the time against right-handers.

BIGGEST THREATS

- Most dangerous length is **Yorker/Full** (8 wkts, 3.5% adjusted strike).
- Danger pitching line: **5th stump** (over the wicket).
- Takes 15% of wickets pitching **a good length on the 5th stump**, over the wicket.
- Beats the bat 12.5% of tracked balls (false-shot 24.7%).
- Most likely to dismiss you **caught** (73% of wickets).
- 49% of catches are behind the wicket (keeper / slips / gully); most often to keeper, gully, slip: 2nd.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (16% of runs).
- Short ball: 35% of deliveries, economy 2.7 — 87 wkts from 3515 short balls.
- Away from yorker/full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (47%) — his main scoring release.
- Cash in when he goes **full outside off** (economy 3.9, beats the bat only 24%).

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 16 in his last 5 Tests vs 21 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	775	21	16.4	2.66	36.9	73%	135	7.56 m

How he gets you out	His %	Base	Index
Caught	73%	65%	1.13×
Bowled	19%	19%	1.00×
LBW	7%	15%	0.49×

Share of his 229 wickets by type, indexed against the base rate vs the average pace bowler to RHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 39](#) [Gully 15](#) [Slip: 2nd 14](#) [Slip: 1st 10](#) [Bowler 7](#)

[Square leg: short leg 4](#)

Angle & variations: Round the wicket to LHB (59%), stays over to RHB · slower balls 2.0% (~122 kph)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, seaming both ways, swinging both ways, hitting the top of off (31% of deliveries, economy 1.54). Minor variations: a good length wide outside off (20%) and full outside off (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	seaming both ways, swinging both ways	31%	1.54	64	28%
a good length wide outside off ▶	seaming both ways, swinging away	20%	2.32	33	20%
full outside off ▶	swinging away, seaming both ways	11%	3.91	27	24%
back of a length outside off ▶	seaming both ways, swinging both ways	9%	2.62	28	22%
back of a length wide outside off ▶	seaming both ways, swinging both ways	8%	3.81	21	22%
full wide outside off ▶	swinging away, seaming both ways	5%	5.02	21	32%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 4,134 balls · 84 wkts · econ 2.64

Top ball type	%	Econ	Wkts
a good length outside off	35%	1.57	32
a good length wide outside off	22%	1.77	12
full outside off	11%	4.11	13
back of a length outside off	7%	2.73	7

Most lethal: **full 5th stump** (3.6 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 5,791 balls · 145 wkts · econ 2.88

Top ball type	%	Econ	Wkts
a good length outside off	28%	1.52	32
a good length wide outside off	19%	2.78	21
back of a length outside off	11%	2.58	21
full outside off	11%	3.76	14

Most lethal: **back of length Down leg** (4.1 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length on the 5th stump

RUNS — WHERE MOST CONCEDED
A good length wide outside off
16% of runs (777 of 4718)

DANGER LINE
5th stump
62 wkts / 2,086 balls · 2.9% adj (3.0% raw)

DANGER LENGTH
Yorker/Full
8 wkts / 201 balls · 3.5% adj (4.0% raw)

MOST LETHAL ZONE (BY RATE)
Back of Length / Down leg
6 wkts / 117 balls · 4.0% adj (5.1% raw)

Most threatening pitching full on the 5th stump (8 wkts, 3.5% strike). Most wickets come from a good length on the 5th stump, while he leaks the most runs a good length wide outside off.
Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

NEW BALL (≤ 30 OV)

full 5th stump

most lethal cell · 3.6 wkts/100 · danger length full · 84 wkts off 4,134 balls

OLD BALL (31+ OV)

back of length Down leg

most lethal cell · 4.1 wkts/100 · danger length yorker/full · 145 wkts off 5,791 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	4,134	84	21.6	2.64	49.2	26%	7.18 m
Old ball (31+ ov)	5,791	145	19.1	2.88	39.9	24%	7.39 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	3,621	72	22.2	2.65	50.3	23%	7.21 m
Middle (4–7)	4,684	88	25.2	2.84	53.2	23%	7.23 m
Tail (8–11)	1,620	69	11.2	2.87	23.5	34%	7.85 m

Bangs it in more with the old ball (5%→20% short); more short balls at the tail (29% vs 11% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

51% of his runs come in boundaries — a boundary every 18 balls; most runs go to the off side (47%); the drive hurts most (121 fours/sixes at 2.8 runs/ball).

BOUNDARY %

Cut	42	123	5%	23	2.93
Slog	7	24	1%	3	3.43

Direction from ball-tracking (all scoring shots); shot type recorded on 57% of scoring balls (1270/2234) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Runs come mostly on the off side (52%).

Where They Pitch It

Pitches it a good length wide outside off most often (20%); drops short often (35%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 5th stump, but strikes most often pitching on the 5th stump.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (98%, 9,712 balls); round the wicket is a rare change-up (2%, 213 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	9712 (98%)	Wide of 6th	7.3 m	14%	2.76	222	51%
Round	213 (2%)	Down leg	10.3 m	57%	3.35	7	57%

Over the Wicket

Where he pitches it from over the wicket (9712 balls).

Round the Wicket

Where he pitches it from round the wicket (213 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ± 2.1 m; more repeatable than 25% of pace bowlers); tends to bang it in later in the over (short 12%→15% by the 5th–6th ball); and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 29% of the time after banging one in.

Across 267 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.4 m	12%	2.75	2.0%
Ball 2	7.3 m	13%	2.80	2.2%
Ball 3	7.3 m	15%	2.95	1.8%
Ball 4	7.4 m	18%	2.97	3.2%
Ball 5	7.3 m	19%	2.77	1.8%
Ball 6	7.1 m	12%	2.45	2.7%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 90% of right-arm pace); releases about 71 cm from the middle stump; varies his spot on the crease a lot (more than 86% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	52%	5,181	2.88	114	21.9	45
Wide (>75cm)	48%	4,837	2.88	108	21.5	45

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	82%	0%	62%	38%
Round the wicket	18%	0%	8%	92%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce and seams it around.

Generates above avg seam and well below avg swing for a pace bowler; seams it away more to right-hand batters (56%).

Swing by ball age to right-hand batters: new ball (≤ 25 ov, n=828) 65% away / 35% in; old ball (≥ 40 ov, n=1170) 58% away / 42% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.50°	8th pct (well below avg)	61% away / 39% in
Seam	0.60°	62nd pct (above avg)	57% away / 43% in
Bounce	4.2°	72nd pct (above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 6th stump** (26% of play-and-misses). Overall he beats the bat 12.5% of tracked balls (false-shot 24.7%, n=6,396).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
