Scouting Summary

COMMON THEMES

- Right Fast, averaging 135.2 kph (up to 140.4).
- Typical length is **7-8m** (their good length); median 7.4 m.
- Stock ball is a **good length wide outside off, seaming both ways, swinging both ways, passing outside off** (39% of deliveries).
- Goes round the wicket 0% of the time against right-handers.

BIGGEST THREATS

- Most dangerous length is **Good Length** (55 wkts, 3.0% adjusted strike).
- Danger pitching line: **5th stump** (over the wicket).
- Takes 33% of wickets pitching a **good length on the 6th stump**, over the wicket.
- Beats the bat 13.1% of tracked balls (false-shot 31.2%).
- Most likely to dismiss you **caught** (66% of wickets).
- 83% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 1st, slip: 2nd.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (33% of runs).
- Short ball: 32% of deliveries, economy 2.8 — 11 wkts from 727 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (48%) — his main scoring release.

Repeatability

P93

±1.2 m · vs pace bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 25 in his last 5 Tests vs 18 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, seaming both ways, swinging both ways, passing outside off (39% of deliveries, economy 2.42). Minor variations: a good length outside off (35%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	seaming both ways, swinging both ways	39%	2.42	20	33%
a good length outside off ▶	seaming both ways, swinging in	35%	2.23	34	31%
full outside off ▶	seaming both ways, swinging in	7%	4.13	4	24%
back of a length wide outside off ▶	seaming both ways, swinging in	6%	3.68	1	32%
a good length in the channel ▶	seaming both ways, swinging in	3%	4.58	1	32%
full wide outside off ▶	seaming both ways, swinging both ways	3%	7.07	2	31%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 1,219 balls · 34 wkts · econ 2.81

Top ball type	%	Econ	Wkts
a good length wide outside off	41%	2.31	11
a good length outside off	34%	1.89	20
full outside off	7%	4.40	2
back of a length wide outside off	7%	3.73	0

Most lethal: **good length 5th stump** (5.3 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 1,048 balls · 30 wkts · econ 2.87

Top ball type	%	Econ	Wkts
a good length wide outside off	37%	2.56	9
a good length outside off	37%	2.60	14
full outside off	7%	3.80	2
back of a length wide outside off	6%	3.62	1

Most lethal: **good length 5th stump** (3.4 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length on the 6th stump
33% of mapped wickets (21 of 64)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
33% of runs (366 of 1096)

DANGER LINE
5th stump
15 wkts / 328 balls · 4.2% adj (4.6% raw)

DANGER LENGTH
Good Length
55 wkts / 1,801 balls · 3.0% adj (3.1% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 5th stump
13 wkts / 245 balls · 4.7% adj (5.3% raw)

Most threatening pitching a good length on the 5th stump (55 wkts, 3.0% strike). Most wickets come from a good length on the 6th stump, while he leaks the most runs a good length wide outside off.

NEW BALL (≤ 30 OV)

good length 5th stump

most lethal cell · 5.3 wkts/100 · danger length good length · 34 wkts off 1,219 balls

OLD BALL (31+ OV)

good length 5th stump

most lethal cell · 3.4 wkts/100 · danger length full · 30 wkts off 1,048 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	1,219	34	16.8	2.81	35.9	30%	7.42 m
Old ball (31+ ov)	1,048	30	16.7	2.87	34.9	32%	7.48 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	580	14	16.9	2.45	41.4	24%	7.53 m
Middle (4–7)	1,262	33	19.9	3.13	38.2	30%	7.44 m
Tail (8–11)	425	17	10.5	2.51	25.0	47%	7.36 m

Scoring Profile (vs right-handers)

51% of his runs come in boundaries — a boundary every 17 balls; most runs go to the off side (48%); the drive hurts most (52 fours/sixes at 2.6 runs/ball).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	251	426	46%	39	1.70
Drive	136	355	38%	52	2.61
Cut	23	56	6%	10	2.43
Pull/Hook	15	50	5%	9	3.33
Sweep	5	28	3%	5	5.60
Slog	5	13	1%	2	2.60

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (526/526) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around 6th stump and moves it back.

Runs come mostly on the leg side (51%).

Where They Pitch It

Pitches it a good length wide outside off most often (39%); drops short often (32%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 6th stump, but strikes most often pitching on the 5th stump.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (100%, 2,266 balls); the round the wicket sample (1 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	2266 (100%)	Wide of 6th	7.4 m	2%	2.83	64	51%
Round	1 (0%)	Wide of 6th	—	—	24.00	0	100%

Over the Wicket

Where he pitches it from over the wicket (2266 balls).

Round the Wicket

Round the wicket — only 1 balls to right-handers, too few to read into.

Sequencing & Over Construction

Metronomic — hammers the same length repeatedly, little to feast on (length spread ± 1.3 m; more repeatable than 93% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 13% of the time after banging one in; sets batters up then pitches fuller for the wicket (37% of dismissals come off a ball fuller than the one before).

Across 65 dismissals, the wicket ball lands about 41 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.6 m	2%	2.84	3.4%
Ball 2	7.5 m	2%	3.02	2.1%
Ball 3	7.4 m	2%	2.76	4.5%
Ball 4	7.5 m	4%	2.40	2.2%
Ball 5	7.4 m	3%	2.94	2.9%
Ball 6	7.2 m	1%	2.89	1.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases wide of the stumps (83 cm out, wider than 85% of right-arm pace); releases from the same spot almost every ball (steadier than 78% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	25%	786	2.79	15	24.4	52
Wide (>75cm)	75%	2,403	2.82	67	16.8	36

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	77%	0%	11%	89%
Round the wicket	23%	0%	70%	30%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Movement (vs the average pace bowler · vs right-handers)

A seam bowler who moves it both ways (57% away / 43% in); skids through at a lower trajectory.

Generates above avg seam and well below avg swing for a pace bowler; seams it away more to right-hand batters (57%).

Swing by ball age to right-hand batters: new ball (≤ 25 ov, $n=285$) 25% away / 75% in; old ball (≥ 40 ov, $n=263$) 35% away / 65% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.43°	4th pct (well below avg)	31% away / 69% in
Seam	0.63°	76th pct (above avg)	57% away / 43% in
Bounce	3.5°	7th pct (well below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (39% of play-and-misses). Overall he beats the bat 13.1% of tracked balls (false-shot 31.2%, n=1,531).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
