SUMMARY

- A modest, steady batter — vulnerable to swing.
- Plan for pace: bowl **full outside off**, get it to **seams away**.
- They get out most to the **full in the channel** (3.7 dismissals/100).
- Most often out **caught** (70% of dismissals); most often to right fast (26).

COMMON THEMES

- left-hand bat, averaging 25.6 at a strike rate of 50.4.
- Carries a big share of the batting — 11.4% of team runs.
- Scores mainly through the leg side (49%).

STRENGTHS

- Main scoring shot is the work/nudge (36% of runs).
- The **cut** brings them 16% of their runs vs pace — 2.1× the typical Test batter's share.
- Starts securely — their dismissal rate barely drops once set (1.9 early vs 2.1/100); early pressure alone won't buy their wicket. Early runs come mainly off the work/nudge (40%).

WEAKNESSES / HOW TO GET HIM

- Most often out **caught** (70% of dismissals); most often to right fast (26).
- Vulnerable to the **full** (averages 20 there vs 26 overall; 3.1 dismissals/100).
- Struggles **outside off** (18 avg, 2.2 outs/100).
- The ball that seams away hurts them (avg 16 vs 39 when it holds its line).
- Most dangerous ball: **full in the channel** (3.7 dismissals/100, avg 16).
- His **pull/hook** is high-risk (false shot 35%, 0.0 outs/100).

Batting Fingerprint (percentile vs Test batters · pace traits)

A modest, steady batter — vulnerable to swing.

Changing (last 3 years vs career): strike rate up; average up; false % vs pace up.

Solid line = career, dotted = last 3 years (avg / SR / false% vs pace & spin). Percentile among Test batters (≥1500 balls). Red = a target (high vulnerability); green = a strength.

Match Impact (share of runs)

Makes **11.4%** of their team's runs over a career (typical innings 7.6%), and **2.9%** of all runs in their matches; carries the innings (≥25% of the team's runs) **15%** of the time, and dominates (≥40%) **4%**.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Scott Boland	Right pace	14.9	41.1	51.5	good length, 4th-stump channel	Caught behind 27.2%	High
Pat Cummins	Right pace	18.7	44.2	46.9	good length, 4th-stump channel	Caught behind 26.5%	High
Josh Hazlewood	Right pace	19.9	42.7	43.5	good length, 4th-stump channel	Caught behind 27.0%	High
Beau Webster	Off-spin	20.7	41.2	42.1	good length, 4th-stump channel	Caught behind 27.1%	High
Nathan Lyon	Off-spin	25.4	43.6	40.7	good length, outside off	LBW 19.3%	High

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.
