SUMMARY

- A modest, steady batter — no glaring weakness.
- Plan for spin: bowl **good length in the channel**, get it to **turns away**.
- Most often out **caught** (56% of dismissals); most often to left orthodox (18).

COMMON THEMES

- right-hand bat, averaging 30.9 at a strike rate of 48.6.
- Carries a big share of the batting — 9.6% of team runs.
- Scores mainly through the off side (41%).

STRENGTHS

- Main scoring shot is the drive (34% of runs).
- The **cut** brings them 14% of their runs vs spin — 1.7× the typical Test batter's share.
- Starts securely — their dismissal rate barely drops once set (1.4 early vs 1.7/100); early pressure alone won't buy their wicket. Early runs come mainly off the drive (30%).

WEAKNESSES / HOW TO GET HIM

- Most often out **caught** (56% of dismissals); most often to left orthodox (18).
- Struggles **in the channel** (14 avg, 2.6 outs/100).
- The ball that turns away hurts them (avg 24 vs 76 when it holds its line).
- Most dangerous ball: **good length in the channel** (3.5 dismissals/100, avg 10).
- His **sweep** is high-risk (false shot 31%, 8.8 outs/100).

Batting Fingerprint (percentile vs Test batters · spin traits)

A modest, steady batter — no glaring weakness.

Changing (last 3 years vs career): strike rate up; average up.

Solid line = career, dotted = last 3 years (avg / SR / false% vs pace & spin). Percentile among Test batters (≥1500 balls). Red = a target (high vulnerability); green = a strength.

Match Impact (share of runs)

Makes **9.6%** of their team's runs over a career (typical innings 7.1%), and **2.5%** of all runs in their matches; carries the innings (≥25% of the team's runs) **8% of the time**.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodox line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the left.

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against off spin, so the orthodox field stands — that is the read.

Floating fielder: They score only 1% of their runs where midwicket stands — the spare run-saver to move as the game asks.

Floating fielder: Silly point sees few of their edges (0.1 vs 1.6 for the cordon) — float to backward point as needed.
