Batting Fingerprint (percentile vs Test batters · spin traits)

A high-class, steady batter — strong vs spin, tight technique.

Solid line = career, dotted = last 3 years (avg / SR / false% vs pace & spin). Percentile among Test batters (≥1500 balls). Red = a target (high vulnerability); green = a strength.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodox line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the left.
