SUMMARY

- A modest, steady batter — strong vs spin.
- Plan for spin: bowl **full in the channel**, get it to **drifts in**.
- They get out most to the **good length on the stumps** (3.3 dismissals/100).
- Most often out **caught** (50% of dismissals); most often to off spin (10).
- Vulnerable early — get at them hard in their first 30 balls.

COMMON THEMES

- left-hand bat, averaging 35.9 at a strike rate of 49.0.
- Carries a big share of the batting — 11.4% of team runs.
- Scores mainly through the leg side (43%).

STRENGTHS

- Main scoring shot is the drive (34% of runs).
- The **pull/hook** brings them 12% of their runs vs spin — 3.1× the typical Test batter's share. Scores unusually little off the **sweep** vs spin (2% of runs vs 17% typically).

WEAKNESSES / HOW TO GET HIM

- **Get them early** — they're 1.4× more likely to fall in their first 30 balls (1.8 vs 1.3 dismissals/100 once set; false shot 12% vs 7%). Early runs come mainly off the work/nudge (51%).
- Most often out **caught** (50% of dismissals); most often to off spin (10).
- Vulnerable to the **full** (averages 24 there vs 36 overall; 1.7 dismissals/100).
- Struggles **in the channel** (14 avg, 2.3 outs/100).
- The ball that drifts in hurts them (avg 28 vs 52 when it holds its line).
- Most dangerous ball: **good length on the stumps** (3.3 dismissals/100, avg 18).

Batting Fingerprint (percentile vs Test batters · spin traits)

A modest, steady batter — strong vs spin.

Changing (last 3 years vs career): strike rate up; false % vs spin up; average up.

Solid line = career, dotted = last 3 years (avg / SR / false% vs pace & spin). Percentile among Test batters (≥1500 balls). Red = a target (high vulnerability); green = a strength.

Match Impact (share of runs)

Makes 11.4% of their team's runs over a career (typical innings 7.6%), and 2.9% of all runs in their matches; carries the innings (≥25% of the team's runs) 15% of the time, and dominates (≥40%) 4%.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Scott Boland	Right pace	14.9	41.1	51.5	good length, 4th-stump channel	Caught behind 27.2%	High
Pat Cummins	Right pace	18.7	44.2	46.9	good length, 4th-stump channel	Caught behind 26.5%	High
Josh Hazlewood	Right pace	19.9	42.7	43.5	good length, 4th-stump channel	Caught behind 27.0%	High
Beau Webster	Off-spin	20.7	41.2	42.1	good length, 4th-stump channel	Caught behind 27.1%	High
Nathan Lyon	Off-spin	25.4	43.6	40.7	good length, outside off	LBW 19.3%	High

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.
