v New Zealand · 2 Tests · 186 balls · 77 runs · avg 19.2

Too few balls in this series to compare a plan.

Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other RHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the left.

Field vs left-arm orthodox

Mid-off	Stock	Standard stock position.
Mid-on	Stock	Standard stock position.
Midwicket	Stock	Standard stock position.
Deep square leg	Stock	Standard stock position.

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against left-arm orthodox, so the orthodox field stands — that is the read.

- Floating fielder:** They score only 0% of their runs where backward point stands — the spare run-saver to move as the game asks.
- Floating fielder:** Silly point sees few of their edges (0.0 vs 0.1 for the cordon) — float to backward point as needed.
