SUMMARY

- Plan for spin: bowl **full down the leg side**, get it to **drifts in**.
- They get out most to the **full wide outside off** (4.3 dismissals/100).
- Most often out **caught** (87% of dismissals); most often to off spin (10).

COMMON THEMES

- left-hand bat, averaging 27.7 at a strike rate of 55.9.
- Carries a big share of the batting — 11.9% of team runs.
- Scores mainly through the V (39%).

STRENGTHS

- Main scoring shot is the drive (34% of runs).
- The **slog** brings them 9% of their runs vs spin — 1.7× the typical Test batter's share.
- Starts securely — their dismissal rate barely drops once set (2.1 early vs 2.0/100); early pressure alone won't buy their wicket. Early runs come mainly off the work/nudge (36%).

WEAKNESSES / HOW TO GET HIM

- Most often out **caught** (87% of dismissals); most often to off spin (10).
- Struggles **down the leg side** (14 avg, 4.8 outs/100).
- The ball that drifts in hurts them (avg 18 vs 33 when it holds its line).
- Most dangerous ball: **full wide outside off** (4.3 dismissals/100, avg 20).

Match Impact (share of runs)

Makes **11.9%** of their team's runs over a career (typical innings 8.5%), and **3.1%** of all runs in their matches; carries the innings (≥25% of the team's runs) **25% of the time**, and dominates (≥40%) **7%**.

Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other LHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Scott Boland	Right pace	14.7	50.1	56.6	good length, 4th-stump channel	Caught behind 26.2%	High
Pat Cummins	Right pace	18.4	51.4	52.0	good length, 4th-stump channel	Caught behind 25.5%	Med
Josh Hazlewood	Right pace	21.1	52.4	47.9	good length, 4th-stump channel	Caught behind 26.7%	Med
Beau Webster	Off-spin	23.5	54.7	45.8	good length, 4th-stump channel	Caught behind 26.4%	Med
Mitch Starc	Left pace	27.6	59.0	44.2	good length, 4th-stump channel	Caught behind 23.4%	Cohort

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodox line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against off spin, so the orthodox field stands — that is the read.

Floating fielder: They score only 0% of their runs where mid-off stands — the spare run-saver to move as the game asks.

Floating fielder: Silly point sees few of their edges (0.1 vs 1.0 for the cordon) — float to backward point as needed.
