COMMON THEMES

- left-hand bat, averaging 35.1 at a strike rate of 54.5.
- Carries a big share of the batting — 13.8% of team runs.
- Scores mainly through the leg side (42%).

STRENGTHS

- Main scoring shot is the work/nudge (32% of runs).
- The **sweep** brings them 12% of their runs — 1.7× the typical Test batter's share.
- Stronger against spin (42) than pace (30); pace — especially the quicks — is the more productive line of attack.

WEAKNESSES / HOW TO GET HIM

- Get them early** — they're 1.5× more likely to fall in their first 30 balls (2.0 vs 1.3 dismissals/100 once set; false shot 14% vs 10%). Early runs come mainly off the work/nudge (37%).
- Most often out **caught** (68% of dismissals); most often to right fast (36).
- Struggles **in the channel** (20 avg, 2.3 outs/100).
- The ball that seams away hurts them (avg 18 vs 41 when it holds its line).
- The ball that swings in hurts them (avg 18 vs 44 when it holds its line).
- Most dangerous ball: **full in the channel** (5.8 dismissals/100, avg 11).
- His **pull/hook** is high-risk (false shot 35%, 0.0 outs/100).

Batting Fingerprint (percentile vs Test batters)

Percentile among Test batters (≥1500 balls). Red = a target (high vulnerability); green = a strength. Grey line = this batter in the peer spread.

Match Impact (share of runs)

Makes **13.8%** of their team's runs over a career (typical innings 7.7%), and **3.5%** of all runs in their matches; carries the innings (≥25% of the team's runs) **16%** of the time, and dominates (≥40%) 5%.

Against Each Bowler Type

Stronger against spin (42) than pace (30); pace — especially the quicks — is the more productive line of attack.

Too few balls in this series to compare a plan.

Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other LHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Scott Boland	Right pace	20.2	38.1	40.0	good length, 4th-stump channel	Caught behind 26.2%	High
Pat Cummins	Right pace	24.2	41.1	37.0	good length, 4th-stump channel	Caught behind 25.6%	High
Josh Hazlewood	Right pace	25.3	41.4	36.1	good length, 4th-stump channel	Caught behind 25.4%	High
Nathan Lyon	Off-spin	28.6	48.7	39.4	good length, outside off	Bowled 18.2%	High
Mitch Starc	Left pace	29.6	56.1	40.5	good length, 4th-stump channel	Caught behind 23.2%	High

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.
