COMMON THEMES

- left-hand bat, averaging 38.1 at a strike rate of 56.8.
- Carries a big share of the batting — 14.6% of team runs.
- Scores mainly through the off side (45%).

STRENGTHS

- Main scoring shot is the work/nudge (30% of runs).
- The **sweep** brings them 20% of their runs — 2.8× the typical Test batter's share. Scores unusually little off the **cut** (3% of runs vs 8% typically).
- Stronger against spin (52) than pace (28); pace — especially the quicks — is the more productive line of attack.
- Starts securely — their dismissal rate barely drops once set (1.3 early vs 1.6/100); early pressure alone won't buy their wicket. Early runs come mainly off the work/nudge (31%).

WEAKNESSES / HOW TO GET HIM

- Most often out **caught** (56% of dismissals); most often to right fast (14).
- Vulnerable to the **good length** (averages 19 there vs 38 overall; 1.7 dismissals/100).
- Struggles **outside off** (16 avg, 3.3 outs/100).
- The ball that seams in hurts them (avg 15 vs 42 when it holds its line).
- Most dangerous ball: **full outside off** (4.8 dismissals/100, avg 20).
- His **drive** is high-risk (false shot 30%, 2.6 outs/100).

Match Impact (share of runs)

Makes **14.6%** of their team's runs over a career (typical innings 12.6%), and **3.9%** of all runs in their matches; carries the innings (≥25% of the team's runs) **23%** of the time.

Against Each Bowler Type

Stronger against spin (52) than pace (28); pace — especially the quicks — is the more productive line of attack.

How Attacks Bowl To Them (last 3 series)

v Zimbabwe · 1 Test · 114 balls · 49 runs · avg 24.5

They bowled you more on a good length than your teammates. 2 dismissals — 1 caught and 1 bowled.

Ball	Them	Teammates	
A good length	59%	46%	▲ more

v Pakistan · 2 Tests · 395 balls · 232 runs · avg 58.0

They bowled you more short of a length, with the width to cut and short, and less in the channel and full. 4 dismissals — 3 LBW and 1 caught, the wicket ball most often a good length, the channel.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Scott Boland	Right pace	16.0	45.8	52.5	good length, 4th-stump channel	Caught behind 26.2%	High
Pat Cummins	Right pace	17.9	46.9	48.6	good length, 4th-stump channel	Caught behind 28.3%	High
Josh Hazlewood	Right pace	22.1	47.1	43.5	good length, 4th-stump channel	Caught behind 26.2%	High
Brendan Doggett	Right pace	24.5	61.8	48.3	short, 4th-stump channel	Caught behind 29.6%	High
Beau Webster	Off-spin	25.8	48.8	39.6	good length, 4th-stump channel	Caught behind 27.4%	High

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodox line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.
