Scouting Summary

COMMON THEMES - Right Fast, averaging 135.6 kph (up to 143.7). - Typical length is 7-8m (their good length); median 6.5 m. - Stock ball is a good length wide outside off, swinging both ways, seaming away, passing outside off (23% of deliveries). - Goes round the wicket 45% of the time against left-handers. Round the wicket he shifts his pitching line from stumps to wide of 6th. - Across an over he holds a fairly consistent length.	BIGGEST THREATS - Most dangerous length is Good Length (5 wkts, 0.9% adjusted strike). - Danger pitching line: 5th stump. - Takes 22% of wickets pitching a good length wide outside off. - Beats the bat 10.0% of tracked balls (false-shot 16.2%). - Wickets come mostly caught behind (70%). 71% of catches are behind the wicket (keeper / slips / gully); most often to keeper, gully, mid on: regulation.	AREAS TO EXPLOIT - Concedes most runs pitching a good length wide outside off (18% of runs). - Short ball: 27% of deliveries, economy 4.6 — 3 wkts from 360 short balls. - Away from good length, the wicket threat drops off — look to score in the less-productive lengths. - Most of his runs leak through the leg side (45%) — his main scoring release. - Cash in when he goes good length down the leg side (economy 3.4, beats the bat only 26%).

Bowling Fingerprint

Changing (last 3 years vs career): bounce up; seam down; repeatability up.

Pace P76 → P72 135 kph · vs pace bowlers	Release height P22 → P32 1.93 m · vs right-arm pace	Crease width P71 → P68 74 cm · vs right-arm pace	Crease variation P94 → P99 ±28 cm · vs right-arm pace
Seam P37 → P2 0.5° · vs pace bowlers	Swing P10 → P12 0.5° · vs pace bowlers	Bounce P54 → P92 4.1° · vs pace bowlers	Repeatability P32 → P51 ±1.7 m · vs pace bowlers

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 58 last 5 vs 52 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	70%	68%	1.03×
Bowled	20%	18%	1.12×

Share of his 10 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 4](#) [Gully 1](#) [Mid on: regulation 1](#) [Square leg: regulation 1](#)
Angle & variations: Round the wicket to LHB (45%), stays over to RHB · slower balls 2.0% (~123 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, swinging both ways, seaming away, passing outside off (23% of deliveries, economy 3.03). Minor variations: a good length on the stumps (11%) and a good length down the leg side (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	swinging both ways, seaming away	23%	3.03	2	14%
a good length on the stumps ▶	seaming both ways, swinging in	11%	2.68	1	13%
a good length down the leg side ▶	seaming both ways	11%	3.45	0	26%
a good length outside off ▶	seaming both ways, swinging in	10%	2.02	2	18%
full outside off ▶	swinging both ways, seaming away	7%	4.98	2	14%
back of a length wide outside off ▶	seaming both ways, swinging in	7%	7.12	0	11%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 613 balls · 2 wkts · econ 3.85

Top ball type	%	Econ	Wkts
a good length wide outside off	28%	2.05	1
a good length outside off	13%	2.40	1
a good length down the leg side	10%	4.19	0
full outside off	7%	6.60	0

Old ball (31+ ov) · 704 balls · 8 wkts · econ 3.43

Top ball type	%	Econ	Wkts
a good length wide outside off	19%	4.27	1
a good length on the stumps	15%	1.20	1
a good length down the leg side	11%	2.90	0
a good length outside off	8%	1.50	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
A good length wide outside off
22% of mapped wickets (2 of 9)

DANGER LENGTH
Good Length
5 wkts / 555 balls · 0.9% adj (0.9% raw)

DANGER LINE
5th stump
4 wkts / 84 balls · 2.8% adj (4.8% raw) · low sample

RUNS — WHERE MOST CONCEDED
A good length wide outside off
18% of runs (112 of 617)

Most threatening pitching a good length on the 5th stump (5 wkts, 0.9% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.

Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	613	2	196.5	3.85	306.5	17%	7.27 m
Old ball (31+ ov)	704	8	50.4	3.43	88.0	15%	7.43 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	879	3	179.3	3.67	293.0	16%	7.37 m
Middle (4–7)	330	4	55.5	4.04	82.5	16%	7.17 m

Bangs it in more with the old ball (3%→11% short); more short balls at the tail (13% vs 8% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Batters who profile on top: Steve Smith (RHB, exp avg 87.2).

Scoring Profile (vs left-handers)

62% of his runs come in boundaries — a boundary every 11 balls; most runs go to the leg side (45%); the drive hurts most (39 fours/sixes at 2.9 runs/ball).

BOUNDARY %
62%
runs in 4s/6s

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	123	226	39%	25	1.84
Drive	69	202	35%	39	2.93
Cut	37	92	16%	17	2.49
Pull/Hook	20	43	7%	6	2.15

Direction from ball-tracking (all scoring shots); shot type recorded on 76% of scoring balls (273/357) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around 5th stump and moves it back.

Runs come mostly on the off side (53%).

Where They Pitch It

Pitches it a good length wide outside off most often (23%); mixes in the short ball (27%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 5th stump.

Speed & Spells

He drops ~1.9 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 3.16→4.19, a wicket every 240→85 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	721 (55%)	Stumps	7.4 m	11%	3.16	3	63%
Round	596 (45%)	Wide of 6th	7.3 m	5%	4.19	7	62%

Over the Wicket

Where he pitches it from over the wicket (721 balls).

Round the Wicket

Where he pitches it from round the wicket (596 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ± 2.2 m; more repeatable than 32% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 35 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.4 m	5%	4.08	0.5%
Ball 2	7.4 m	7%	2.96	1.4%
Ball 3	7.3 m	5%	3.54	0.5%
Ball 4	7.6 m	7%	3.17	0.5%
Ball 5	7.2 m	7%	3.87	0.9%
Ball 6	7.4 m	3%	3.97	0.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 78% of right-arm pace); releases wide of the stumps (74 cm out, wider than 71% of right-arm pace); varies his spot on the crease a lot (more than 94% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	2%	53	2.04	0	—	—
Standard (45–75)	34%	1,103	3.68	10	67.6	110
Wide (>75cm)	64%	2,055	3.64	30	41.6	68

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	81%	2%	41%	57%
Round the wicket	19%	0%	7%	93%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A moderate mover of the ball.

Generates below avg seam and well below avg swing for a pace bowler; seams it away more to left-hand batters (56%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=193) 33% away / 67% in; old ball (≥40 ov, n=214) 34% away / 66% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.53°	9th pct (well below avg)	32% away / 68% in
Seam	0.54°	36th pct (below avg)	57% away / 43% in
Bounce	4.1°	54th pct (about average)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (19% of play-and-misses). Overall he beats the bat 10.0% of tracked balls (false-shot 16.2%, n=1,317).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
