Scouting Summary

COMMON THEMES

- Right Fast, averaging 132.0 kph (up to 140.6).
- Typical length is **7-8m** (their good length); median 6.5 m.
- Stock ball is a **good length wide outside off, swinging away, seaming away, passing outside off** (21% of deliveries).
- Goes round the wicket 46% of the time against left-handers.
- Round the wicket** he shifts his pitching line from stumps to wide of 6th.
- Across an over he **varies his length a lot**, banging it in more as the over goes on.

BIGGEST THREATS

- Most dangerous length is **Good Length** (6 wkts, 1.6% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 18% of wickets pitching **full wide outside off**.
- Beats the bat 6.1% of tracked balls (false-shot 12.3%).
- Gets you **caught behind** more than most — 82% of his wickets (1.2× the typical rate for this type).
- 67% of catches are behind the wicket (keeper / slips / gully); most often to keeper, gully, mid on: silly.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (12% of runs).
- Short ball: 25% of deliveries, economy 3.1 — 3 wkts from 204 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (46%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 5.7, beats the bat only 5%).

Bowling Fingerprint

Changing (last 3 years vs career): seam up; repeatability down.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 37 in his last 5 Tests vs 46 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	570	9	36.8	3.48	63.3	19%	130	6.50 m

in-air

How he gets you out	His %	Base	Index
Caught	82%	68%	1.21×
Bowled	18%	18%	1.02×

Share of his 11 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 4](#) [Gully 2](#) [Mid on: silly 1](#) [Mid on: regulation 1](#)
Angle & variations: Round the wicket to LHB (46%), stays over to RHB · slower balls 2.4% (~117 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, swinging away, seaming away, passing outside off (21% of deliveries, economy 1.92). Minor variations: a good length on the stumps (15%) and full wide outside off (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	swinging away, seaming away	21%	1.92	1	7%
a good length on the stumps ▶	swinging away, seaming both ways	15%	2.82	2	27%
full wide outside off ▶	swinging away	11%	5.67	3	5%
a good length down the leg side ▶	swinging away, seaming both ways	9%	1.84	2	19%
a good length outside off ▶	swinging away, seaming both ways	7%	1.92	1	18%
back of a length wide outside off ▶	seaming away, swinging both ways	7%	4.67	2	7%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 399 balls · 6 wkts · econ 3.02

Top ball type	%	Econ	Wkts
a good length wide outside off	27%	1.33	1
full wide outside off	13%	5.11	3
a good length on the stumps	13%	3.00	0
a good length outside off	9%	2.18	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 424 balls · 5 wkts · econ 3.76

Top ball type	%	Econ	Wkts
a good length on the stumps	17%	2.67	2
a good length wide outside off	15%	3.06	0
a good length down the leg side	14%	1.33	2
full wide outside off	8%	6.69	0

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
Full wide outside off
18% of mapped wickets (2 of 11)

DANGER LINE
Wide of 6th
6 wkts / 277 balls · 2.0% adj (2.2% raw)

DANGER LENGTH
Good Length
6 wkts / 384 balls · 1.6% adj (1.6% raw)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
12% of runs (47 of 376)

Most threatening pitching a good length wide outside off (6 wkts, 1.6% strike). Most wickets come from full wide outside off, while he leaks the most runs a good length wide outside off.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	399	6	33.5	3.02	66.5	11%	6.95 m
Old ball (31+ ov)	424	5	53.2	3.76	84.8	13%	7.04 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	459	7	36.4	3.33	65.6	10%	6.97 m
Middle (4–7)	252	2	76.5	3.64	126.0	15%	6.94 m

Bangs it in more with the old ball (3%→14% short); more short balls at the tail (15% vs 5% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Batters who profile on top: Steve Smith (RHB, exp avg 83.2).

Scoring Profile (vs left-handers)

60% of his runs come in boundaries — a boundary every 12 balls; most runs go to the leg side (46%); the drive hurts most (27 fours/sixes at 2.7 runs/ball).

BOUNDARY %
60%
runs in 4s/6s

Work/Nudge	70	109	32%	8	1.56
Pull/Hook	21	49	14%	9	2.33
Cut	8	23	7%	5	2.88

Direction from ball-tracking (all scoring shots); shot type recorded on 83% of scoring balls (178/214) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at 5th stump — pitches around wide of 6th and moves it back.

Runs come mostly on the off side (50%).

Where They Pitch It

Pitches it a good length wide outside off most often (21%); mixes in the short ball (24%).

Where Wickets Come From

Wickets come mostly from balls pitched full wide outside off, but strikes most often pitching wide outside off.

Speed & Spells

He is ~1.5 km/h quicker in later spells, is a touch slower in the 2nd innings, and loses ~2.0 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 3.45→3.35, a wicket every 89→63 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	443 (54%)	Stumps	6.9 m	5%	3.45	5	60%
Round	380 (46%)	Wide of 6th	7.1 m	11%	3.35	6	59%

Over the Wicket

Where he pitches it from over the wicket (443 balls).

Round the Wicket

Where he pitches it from round the wicket (380 balls).

Sequencing & Over Construction

Variable with his length (length spread ±2.5 m; more repeatable than 13% of pace bowlers); tends to bang it in later in the over (short 5%→9% by the 5th–6th ball); and holds the same crease position through the over.

Across 28 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.1 m	5%	2.65	1.4%
Ball 2	7.0 m	6%	2.89	1.4%
Ball 3	7.0 m	2%	3.92	0.8%
Ball 4	7.2 m	10%	3.09	0.8%
Ball 5	7.1 m	10%	3.47	0.7%
Ball 6	6.6 m	7%	4.47	2.8%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 82% of right-arm pace); releases tight to the stumps (48 cm out, tighter than 94% of right-arm pace). Comes wider round the wicket (48 cm over vs 98 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	35%	901	3.50	11	47.8	82
Standard (45–75)	44%	1,124	3.41	10	63.8	112
Wide (>75cm)	21%	533	3.51	11	28.4	48

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	83%	42%	53%	5%
Round the wicket	17%	1%	0%	98%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce.

Generates below avg seam and below avg swing for a pace bowler; seams it away more to left-hand batters (64%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=204) 73% away / 27% in; old ball (≥40 ov, n=127) 87% away / 13% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.69°	28th pct (below avg)	81% away / 19% in
Seam	0.52°	27th pct (below avg)	65% away / 35% in
Bounce	4.3°	82nd pct (well above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (24% of play-and-misses). Overall he beats the bat 6.1% of tracked balls (false-shot 12.3%, n=823).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
