Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 78.1 kph (up to 85.0).
- Typical length is **4-5m** (their good length); median 4.0 m.
- Stock ball is **full on the stumps** (14% of deliveries).
- Goes round the wicket 16% of the time against left-handers.
- Turns it 3.5° on average; 12% of balls turn ≥5°.

BIGGEST THREATS

- Takes 33% of wickets pitching **full on the 5th stump**.
- Beats the bat 3.8% of tracked balls (false-shot 6.9%).
- Most likely to dismiss you **caught** (75% of wickets).
- 33% of catches are behind the wicket (keeper / slips / gully); most often to keeper, third man: short, square leg: regulation.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (22% of runs).
- Most of his runs leak square/through the off side (46%) — his main scoring release.

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 48 last 5 vs 42 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	96	1	48.0	3.00	96.0	12%	76	4.61 m
Career	654	10	41.8	3.83	65.4	7%	79	4.61 m

AVG DRIFT
1.4°
in-air

How he gets you out	His %	Base	Index
Caught	75%	59%	1.28×

Share of his 4 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to:

Keeper 1

Third man: short 1

Square leg: regulation 1

Angle & variations: Mostly over the wicket (round LHB 15% · RHB 95%)

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
Full on the 5th stump
33% of mapped wickets (1 of 3)

RUNS — WHERE MOST CONCEDED
Full on the stumps
22% of runs (14 of 63)

Most wickets come from full on the 5th stump, while he leaks the most runs full on the stumps.

Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Old ball (31+ ov)	138	4	26.5	4.61	34.5	7%	4.69 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

34% of his runs come in boundaries — a boundary every 17 balls; most runs go to the off side (46%).

BOUNDARY %
34%
runs in 4s/6s

ROTATED %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Sweep	8	20	34%	3	2.50
Work/Nudge	13	15	26%	0	1.15
Drive	10	13	22%	1	1.30

Direction from ball-tracking (all scoring shots); shot type recorded on 52% of scoring balls (36/69) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at down leg — pitches around stumps and moves it back.

Runs come mostly on the off side (71%).

Where They Pitch It

Pitches it full on the stumps most often (13%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the 5th stump.

Speed & Spells

He is ~2.5 km/h quicker in later spells, is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively over the wicket to left-handers (84%, 117 balls); the round the wicket sample (22 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	117 (84%)	Stumps	4.8 m	0%	4.05	4	28%
Round	22 (16%)	Stumps	—	—	7.64	0	50%

Over the Wicket

Where he pitches it from over the wicket (117 balls).

Round the Wicket

Round the wicket — only 22 balls to left-handers, too few to read into.

Sequencing & Over Construction

Release Point & Crease Use

A low, skiddy release point (lower than 96% of left-arm spin); releases wide of the stumps (112 cm out, wider than 95% of left-arm spin). Comes wider round the wicket (27 cm over vs 112 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	15%	94	3.70	2	29.0	47
Wide (>75cm)	80%	492	3.94	7	46.1	70

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	21%	73%	21%	6%
Round the wicket	79%	0%	0%	100%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Movement (vs the average spin bowler · vs left-handers)

A moderate spinner of the ball; extracts steep bounce.

Generates about average turn and below avg drift for a spin bowler; turns it in more to left-hand batters (100%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.39°	29th pct (below avg)	100% away / 0% in
Turn	3.80°	59th pct (about average)	0% away / 100% in
Bounce	4.7°	87th pct (well above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

— insufficient data

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / Stumps** (25% of play-and-misses). Overall he beats the bat 3.8% of tracked balls (false-shot 6.9%, n=131).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
