Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 83.9 kph (up to 93.3).
- Typical length is **4-5m** (their good length); median 4.5 m.
- Stock ball is **full outside off, turning in, drifting away, hitting the stumps** (30% of deliveries).
- Goes round the wicket 19% of the time against left-handers.
- Round the wicket** he shifts his pitching line from 6th stump to stumps.
- Turns it 3.8° on average; 21% of balls turn ≥5°.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Full** (35 wkts, 2.3% adjusted strike).
- Danger pitching line: **4th stump** (mostly over the wicket (62%)).
- Takes 20% of wickets pitching **full on the 6th stump**, over the wicket.
- Beats the bat 3.6% of tracked balls (false-shot 8.3%).
- Gets you **bowled** more than most — 28% of his wickets (1.7× the typical rate for this type).
- 36% of catches are behind the wicket (keeper / slips / gully); most often to keeper, square leg: short leg, long on: regulation.
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (14% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (41%) — his main scoring release.
- Cash in when he goes **good length wide outside off** (economy 5.0, beats the bat only 12%).

Bowling Fingerprint

Changing (last 3 years vs career): repeatability down; drift down; crease width down.

±1.0 m · vs spin bowlers

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 22 in his last 5 Tests vs 29 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full outside off, turning in, drifting away, hitting the stumps (30% of deliveries, economy 3.48). Minor variations: a good length outside off (15%) and full wide outside off (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full outside off ▶	turning in, drifting away	30%	3.48	17	7%
a good length outside off ▶	turning in, drifting away	15%	2.62	4	8%
full wide outside off ▶	turning in, drifting away	13%	4.33	6	13%
full in the channel ▶	turning in, drifting away	9%	2.56	6	6%
full on the stumps ▶	turning in, drifting away	9%	3.94	5	5%
a good length wide outside off ▶	turning in, drifting away	8%	4.98	1	12%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 863 balls · 16 wkts · econ 3.68

Top ball type	%	Econ	Wkts
full outside off	32%	2.95	5
a good length outside off	16%	3.38	1
full wide outside off	14%	3.32	4
a good length wide outside off	11%	5.06	1

Most lethal: **full Wide of 6th** (3.0 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 1,866 balls · 34 wkts · econ 3.78

Top ball type	%	Econ	Wkts
full outside off	29%	3.75	12
a good length outside off	14%	2.21	3
full wide outside off	12%	4.89	2
full in the channel	10%	2.81	4

Most lethal: **good length Stumps** (2.9 wkts/100).

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
Full on the 6th stump
20% of mapped wickets (9 of 46)

RUNS — WHERE MOST CONCEDED
Full wide outside off
14% of runs (210 of 1513)

DANGER LINE
4th stump
8 wkts / 315 balls · 2.4% adj (2.5% raw)

DANGER LENGTH
Full
35 wkts / 1,473 balls · 2.3% adj (2.4% raw)

MOST LETHAL ZONE (BY RATE)
Full / 6th stump
9 wkts / 318 balls · 2.6% adj (2.8% raw)

Most threatening pitching full in the 4th-stump channel (35 wkts, 2.3% strike). Most wickets come from full on the 6th stump, while he leaks the most runs full wide outside off.
Zone shares are over his **mapped** wickets — 4 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

NEW BALL (≤ 30 OV)

full Wide of 6th

most lethal cell · 3.0 wkts/100 · danger length full · 16 wkts off 863 balls

OLD BALL (31+ OV)

good length Stumps

most lethal cell · 2.9 wkts/100 · danger length full · 34 wkts off 1,866 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	863	16	33.1	3.68	53.9	8%	4.60 m
Old ball (31+ ov)	1,866	34	34.6	3.78	54.9	8%	4.61 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	1,136	18	37.8	3.60	63.1	8%	4.68 m
Middle (4–7)	1,063	16	46.2	4.18	66.4	8%	4.54 m
Tail (8–11)	530	16	17.8	3.22	33.1	9%	4.62 m

Scoring Profile (vs left-handers)

48% of his runs come in boundaries — a boundary every 15 balls; most runs go to the off side (41%); the sweep hurts most (49 fours/sixes at 2.7 runs/ball).

Slog	33	138	12%	23	4.18
Cut	21	40	3%	4	1.90
Pull/Hook	13	33	3%	6	2.54

Direction from ball-tracking (all scoring shots); shot type recorded on 70% of scoring balls (638/914) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the 5th stump most often (14%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the 6th stump, but strikes most often pitching in the 4th-stump channel.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from 6th stump to stumps — economy 3.65→4.16, a wicket every 63→35 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	2200 (81%)	6th stump	4.6 m	0%	3.65	35	48%
Round	529 (19%)	Stumps	4.6 m	0%	4.16	15	48%

Over the Wicket

Where he pitches it from over the wicket (2200 balls).

Round the Wicket

Where he pitches it from round the wicket (529 balls).

Sequencing & Over Construction

Consistent with his length (length spread ± 1.1 m; more repeatable than 66% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

And tends to strike with a straighter ball after working across the batter (34% straighter than the ball before).

Across 159 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.5 m	0%	4.27	1.6%
Ball 2	4.6 m	0%	4.46	0.8%
Ball 3	4.7 m	0%	3.96	2.7%
Ball 4	4.6 m	0%	3.37	1.8%
Ball 5	4.7 m	0%	3.19	2.5%
Ball 6	4.6 m	0%	3.12	1.6%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 83% of left-arm spin); releases about 85 cm from the middle stump; varies his spot on the crease a lot (more than 79% of left-arm spin). Comes wider round the wicket (58 cm over vs 85 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	1%	157	3.97	3	34.7	52
Standard (45–75)	30%	3,480	3.19	57	32.5	61
Wide (>75cm)	69%	8,129	2.90	140	28.1	58

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	20%	6%	65%	29%
Round the wicket	80%	0%	20%	79%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A big turner of the ball; extracts steep bounce.

Generates above avg turn and about average drift for a spin bowler; turns it in more to left-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.64°	50th pct (about average)	100% away / 0% in
Turn	3.87°	63rd pct (above avg)	0% away / 100% in
Bounce	4.4°	61st pct (above avg)	—

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / Wide of 6th** (28% of play-and-misses). Overall he beats the bat 3.6% of tracked balls (false-shot 8.3%, n=2,624).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wks to qualify).
