Scouting Summary

COMMON THEMES

- Right Fast, averaging 133.7 kph (up to 138.5).
- Typical length is **7-8m** (their good length); median 7.1 m.
- Stock ball is **a good length down the leg side** (29% of deliveries).
- Goes round the wicket 42% of the time against left-handers.

BIGGEST THREATS

- Beats the bat 12.5% of tracked balls (false-shot 16.7%).

AREAS TO EXPLOIT

- Concedes most runs pitching **back of a length wide outside off** (27% of runs).
- Short ball: 25% of deliveries, economy 6.0 — 0 wkts from 6 short balls.

Bowling Fingerprint

Release height

P10

1.89 m · vs right-arm pace

Crease width

P19

56 cm · vs right-arm pace

Crease variation

P28

±9 cm · vs right-arm pace

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

Danger Zones (vs left-handers)

RUNS — WHERE MOST CONCEDED

Back of a length wide outside off

27% of runs (6 of 22)

At the Stumps (wickets)

Ball position as it passes the stumps for wicket balls.

Where They're Scored Off

Runs come mostly on the leg side (60%).

Where They Pitch It

Pitches it a good length down the leg side most often (29%); mixes in the short ball (25%).

Where Wickets Come From

Pitch location of wicket-taking balls.

Speed & Spells

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

— insufficient data

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 5th stump** (33% of play-and-misses). Overall he beats the bat 12.5% of tracked balls (false-shot 16.7%, n=24).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
