Scouting Summary

COMMON THEMES

- Right Fast, averaging 134.4 kph (up to 141.5).
- Typical length is **7-8m** (their good length); median 7.3 m.
- Stock ball is **a good length on the stumps, swinging away, seaming both ways, passing outside off** (20% of deliveries).
- Goes round the wicket 37% of the time against left-handers.
- Round the wicket** he shifts his pitching line from stumps to wide of 6th.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Full** (4 wkts, 2.0% adjusted strike).
- Danger pitching line: **5th stump**.
- Takes 19% of wickets pitching **a good length on the stumps**.
- Beats the bat 6.1% of tracked balls (false-shot 16.6%).
- Gets you **bowled** more than most — 24% of his wickets (1.3× the typical rate for this type).
- 50% of catches are behind the wicket (keeper / slips / gully); most often to keeper, midwicket: regulation, square leg: deep.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length down the leg side** (13% of runs).
- Short ball: 35% of deliveries, economy 4.0 — 7 wkts from 381 short balls.
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (44%) — his main scoring release.
- Cash in when he goes **back of a length down the leg side** (economy 4.2, beats the bat only 18%).

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 22 in his last 5 Tests vs 31 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index	Catches to: Keeper 5 Midwicket: regulation 1 Square leg: deep 1 Cover: extra 1 Slip: 1st 1 Point: regulation 1 Angle & variations: Round the wicket to LHB (36%), stays over to RHB · slower balls 1.7% (~113 kph)
Caught	71%	68%	1.04×	
Bowled	24%	18%	1.31×	

*Share of his 17 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.*

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length on the stumps, swinging away, seaming both ways, passing outside off (20% of deliveries, economy 1.94). Minor variations: a good length down the leg side (13%) and a good length outside off (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length on the stumps ▶	swinging away, seaming both ways	20%	1.94	3	18%
a good length down the leg side ▶	swinging both ways, seaming both ways	13%	3.66	1	20%
a good length outside off ▶	swinging away, seaming both ways	13%	2.23	2	19%
a good length wide outside off ▶	swinging away, seaming both ways	11%	2.49	2	17%
back of a length down the leg side ▶	seaming both ways, swinging both ways	8%	4.21	1	18%
full outside off ▶	swinging away, seaming back	7%	5.91	3	22%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 528 balls · 6 wkts · econ 3.48				Old ball (31+ ov) · 548 balls · 11 wkts · econ 3.49			
Top ball type	%	Econ	Wkts	Top ball type	%	Econ	Wkts
a good length on the stumps	20%	1.81	2	a good length on the stumps	21%	2.05	1
a good length down the leg side	16%	3.49	0	a good length outside off	13%	2.18	1
a good length outside off	13%	2.29	1	a good length wide outside off	12%	2.86	1
a good length wide outside off	10%	2.00	1	a good length down the leg side	11%	3.89	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST COME FROM
A good length on the stumps
19% of mapped wickets (3 of 16)

RUNS — WHERE MOST CONCEDED
A good length down the leg side
13% of runs (84 of 630)

DANGER LINE
5th stump
4 wkts / 103 balls · 2.9% adj (3.9% raw) · low sample

DANGER LENGTH
Full
4 wkts / 185 balls · 2.0% adj (2.2% raw) · low sample

MOST LETHAL ZONE (BY RATE)
Good Length / Stumps
3 wkts / 208 balls · 1.5% adj (1.4% raw) · low sample

Most threatening pitching full on the 5th stump (4 wkts, 2.0% strike). Most wickets come from a good length on the stumps, while he leaks the most runs a good length down the leg side.

*Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	528	6	51.0	3.48	88.0	17%	7.29 m
Old ball (31+ ov)	548	11	29.0	3.49	49.8	16%	7.62 m

Bangs it in more with the old ball (5%→15% short).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

57% of his runs come in boundaries — a boundary every 12 balls; most runs go to the leg side (44%); the drive hurts most (37 fours/sixes at 2.6 runs/ball).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	82	216	39%	37	2.63
Work/Nudge	124	202	36%	17	1.63
Pull/Hook	37	83	15%	13	2.24
Cut	16	50	9%	11	3.12

Direction from ball-tracking (all scoring shots); shot type recorded on 94% of scoring balls (279/296) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at wide of 6th — pitches around stumps and moves it back.

Runs come mostly on the off side (51%).

Where They Pitch It

Pitches it a good length on the stumps most often (20%); drops short often (35%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the stumps, but strikes most often pitching on the 5th stump.

Speed & Spells

He drops ~2.3 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 3.61→3.27, a wicket every 85→44 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	678 (63%)	Stumps	7.5 m	13%	3.61	8	61%
Round	398 (37%)	Wide of 6th	7.4 m	9%	3.27	9	50%

Over the Wicket

Where he pitches it from over the wicket (678 balls).

Round the Wicket

Where he pitches it from round the wicket (398 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ± 2.0 m; more repeatable than 46% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 28% of the time after banging one in; and tends to strike with a straighter ball after working across the batter (31% straighter than the ball before).

Across 38 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.5 m	11%	3.53	1.1%
Ball 2	7.4 m	7%	3.35	0.5%
Ball 3	7.6 m	11%	3.60	1.1%
Ball 4	7.5 m	14%	4.32	1.8%
Ball 5	7.6 m	14%	2.68	2.4%
Ball 6	7.1 m	8%	3.49	2.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 68 cm from the middle stump; varies his spot on the crease a lot (more than 98% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	51%	1,244	3.53	18	40.7	69
Wide (>75cm)	49%	1,198	3.16	25	25.2	48

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	84%	0%	52%	48%
Round the wicket	16%	0%	46%	54%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A moderate mover of the ball.

Generates below avg seam and about average swing for a pace bowler; seams it in more to left-hand batters (53%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=221) 57% away / 43% in; old ball (≥40 ov, n=310) 80% away / 20% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.79°	46th pct (about average)	72% away / 28% in
Seam	0.54°	34th pct (below avg)	47% away / 53% in
Bounce	4.0°	41st pct (about average)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (27% of play-and-misses). Overall he beats the bat 6.1% of tracked balls (false-shot 16.6%, n=1,076).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
