Scouting Summary

COMMON THEMES

- Right Fast, averaging 135.0 kph (up to 143.3).
- Typical length is **8-9m** (their good length); median 7.2 m.
- Stock ball is a **good length wide outside off**, **seaming both ways**, **swinging away**, **passing outside off** (27% of deliveries).
- Goes round the wicket 2% of the time against right-handers.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Back of Length** (8 wkts, 1.9% adjusted strike).
- Danger pitching line: **5th stump**.
- Takes 23% of wickets pitching a **good length wide outside off**.
- Beats the bat 6.9% of tracked balls (false-shot 13.2%).
- Gets you **bowled** more than most — 24% of his wickets (1.3× the typical rate for this type).
- 55% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 2nd, midwicket: short.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (21% of runs).
- Short ball: 37% of deliveries, economy 4.0 — 13 wkts from 890 short balls.
- Away from back of length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (45%) — his main scoring release.
- Cash in when he goes **back of a length wide outside off** (economy 5.0, beats the bat only 9%).

Bowling Fingerprint

Changing (last 3 years vs career): bounce up; seam down; repeatability up.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 58 last 5 vs 52 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

[Cover: extra 2](#) [Slip: 3rd 2](#)

Angle & variations: Round the wicket to LHB (45%), stays over to RHB · slower balls 2.2% (~123 kph)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, seaming both ways, swinging away, passing outside off (27% of deliveries, economy 2.76). Minor variations: a good length outside off (26%) and back of a length wide outside off (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	seaming both ways, swinging away	27%	2.76	7	15%
a good length outside off ▶	swinging both ways, seaming both ways	26%	2.73	9	13%
back of a length wide outside off ▶	seaming both ways, swinging away	11%	5.00	6	9%
back of a length outside off ▶	seaming both ways, swinging both ways	8%	4.78	2	12%
full wide outside off ▶	swinging away, seaming both ways	8%	5.44	3	14%
full outside off ▶	swinging both ways, seaming both ways	7%	4.26	1	14%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 772 balls · 8 wkts · econ 3.51

Top ball type	%	Econ	Wkts
a good length outside off	28%	2.77	1
a good length wide outside off	27%	2.37	3
back of a length wide outside off	11%	4.54	3
back of a length outside off	9%	3.96	1

Most lethal: **back of length Wide of 6th** (2.7 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 1,654 balls · 25 wkts · econ 3.54

Top ball type	%	Econ	Wkts
a good length wide outside off	27%	2.93	4
a good length outside off	25%	2.71	8
back of a length wide outside off	12%	5.20	3
full wide outside off	8%	5.08	3

Most lethal: **good length 5th stump** (3.0 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length wide outside off
23% of mapped wickets (7 of 30)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
21% of runs (253 of 1209)

DANGER LINE
5th stump
7 wkts / 264 balls · 2.3% adj (2.7% raw)

DANGER LENGTH
Back of Length
8 wkts / 404 balls · 1.9% adj (2.0% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 5th stump
5 wkts / 162 balls · 2.6% adj (3.1% raw)

Most threatening pitching back of a length on the 5th stump (8 wkts, 1.9% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.

Zone shares are over his **mapped** wickets — 3 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

NEW BALL (≤ 30 OV)

back of length Wide of 6th

most lethal cell · 2.7 wkts/100 · danger length back of length · 8 wkts off 772 balls

OLD BALL (31+ OV)

good length 5th stump

most lethal cell · 3.0 wkts/100 · danger length good length · 25 wkts off 1,654 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	772	8	56.5	3.51	96.5	11%	7.58 m
Old ball (31+ ov)	1,654	25	39.0	3.54	66.2	14%	7.83 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	1,030	8	76.8	3.58	128.8	12%	7.61 m
Middle (4–7)	1,131	17	40.5	3.65	66.5	13%	7.78 m
Tail (8–11)	265	8	15.8	2.85	33.1	20%	7.94 m

Bangs it in more with the old ball (7%→15% short); more short balls at the tail (18% vs 10% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Batters who profile on top: Steve Smith (RHB, exp avg 87.2).

Scoring Profile (vs right-handers)

57% of his runs come in boundaries — a boundary every 12 balls; most runs go to the off side (45%); the drive hurts most (68 fours/sixes at 2.8 runs/ball).

BOUNDARY %
57%
runs in 4s/6s

Direction from ball-tracking (all scoring shots); shot type recorded on 77% of scoring balls (512/664) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Runs come mostly on the leg side (54%).

Where They Pitch It

Pitches it a good length wide outside off most often (27%); drops short often (36%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 5th stump.

Speed & Spells

He drops ~1.9 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (98%, 2,383 balls); round the wicket is a rare change-up (2%, 43 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	2383 (98%)	Wide of 6th	7.7 m	12%	3.54	33	58%
Round	43 (2%)	Down leg	10.3 m	51%	3.35	0	50%

Over the Wicket

Where he pitches it from over the wicket (2383 balls).

Round the Wicket

Where he pitches it from round the wicket (43 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ± 2.2 m; more repeatable than 32% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 35 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.9 m	10%	3.28	1.3%
Ball 2	7.9 m	13%	4.00	0.7%
Ball 3	7.7 m	11%	3.98	1.2%
Ball 4	7.7 m	11%	2.86	1.7%
Ball 5	7.6 m	11%	3.48	1.5%
Ball 6	7.7 m	10%	3.59	1.8%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 78% of right-arm pace); releases wide of the stumps (74 cm out, wider than 71% of right-arm pace); varies his spot on the crease a lot (more than 94% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	2%	53	2.04	0	—	—
Standard (45–75)	34%	1,103	3.68	10	67.6	110
Wide (>75cm)	64%	2,055	3.64	30	41.6	68

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	81%	2%	41%	57%
Round the wicket	19%	0%	7%	93%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A moderate mover of the ball.

Generates below avg seam and well below avg swing for a pace bowler; seams it away more to right-hand batters (54%).

Swing by ball age to right-hand batters: new ball (≤ 25 ov, n=171) 60% away / 40% in; old ball (≥ 40 ov, n=466) 58% away / 42% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.53°	9th pct (well below avg)	60% away / 40% in
Seam	0.54°	36th pct (below avg)	54% away / 46% in
Bounce	4.1°	54th pct (about average)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (36% of play-and-misses). Overall he beats the bat 6.9% of tracked balls (false-shot 13.2%, n=2,426).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
