Scouting Summary

COMMON THEMES - Right Fast, averaging 132.3 kph (up to 138.7). - Typical length is 7-8m (their good length); median 7.0 m. - Stock ball is a good length outside off, swinging both ways, seaming away, hitting the top of off (32% of deliveries). - Goes round the wicket 1% of the time against right-handers. - Across an over he varies his length a lot.	BIGGEST THREATS - Most dangerous length is Full (7 wkts, 3.4% adjusted strike). - Danger pitching line: 5th stump. - Takes 21% of wickets pitching a good length wide outside off. - Beats the bat 8.7% of tracked balls (false-shot 20.1%). - Gets you bowled more than most — 29% of his wickets (1.5× the typical rate for this type). 94% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 1st, slip: 4th.	AREAS TO EXPLOIT - Concedes most runs pitching a good length on the 6th stump (20% of runs). - Short ball: 28% of deliveries, economy 3.7 — 5 wkts from 362 short balls. - Away from full, the wicket threat drops off — look to score in the less-productive lengths. - Most of his runs leak square/through the off side (47%) — his main scoring release. - Cash in when he goes full outside off (economy 4.3, beats the bat only 18%).

Pace P54 → P51 132 kph · vs pace bowlers	Release height P14 → P14 1.91 m · vs right-arm pace	Crease width P51 → P51 68 cm · vs right-arm pace	Crease variation P96 → P96 ±32 cm · vs right-arm pace
Seam P30 → P30 0.5° · vs pace bowlers	Swing P61 → P61 0.9° · vs pace bowlers	Bounce P59 → P59 4.1° · vs pace bowlers	Repeatability P64 → P64 ±1.6 m · vs pace bowlers

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control); a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 57 in his last 5 Tests vs 33 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	608	6	57.2	3.38	101.3	20%	134	7.09 m

Angle & variations: Round the wicket to LHB (45%), stays over to RHB · slower balls 1.8% (~119 kph)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, swinging away, reverses in, seaming away, hitting the top of off (32% of deliveries, economy 2.90). Minor variations: a good length wide outside off (25%) and full outside off (14%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	swinging away, reverses in, seaming away	32%	2.90	9	21%
a good length wide outside off ▶	swinging away, reverses in, seaming away	25%	2.67	6	20%
full outside off ▶	swinging away, reverses in, seaming both ways	14%	4.33	4	18%
full wide outside off ▶	swinging away, reverses in, seaming away	5%	8.00	5	12%
back of a length wide outside off ▶	seaming both ways, swinging away, reverses in	5%	4.68	0	34%
a good length in the channel ▶	swinging away, reverses in, seaming away	4%	2.81	2	26%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 633 balls · 12 wkts · econ 3.37

Top ball type	%	Econ	Wkts
a good length outside off	32%	2.40	2
a good length wide outside off	27%	2.74	2
full outside off	15%	4.11	1
full wide outside off	6%	5.68	5

Old ball (31+ ov) · 657 balls · 16 wkts · econ 4.03

Top ball type	%	Econ	Wkts
a good length outside off	32%	3.38	7
a good length wide outside off	23%	2.60	4
full outside off	14%	4.55	3
back of a length wide outside off	6%	4.05	0

Most lethal: **good length 5th stump** (3.6 wkts/100).

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length wide outside off
21% of mapped wickets (6 of 28)

RUNS — WHERE MOST CONCEDED
A good length on the 6th stump
20% of runs (156 of 797)

DANGER LINE
5th stump
6 wkts / 202 balls · 2.7% adj (3.0% raw)

DANGER LENGTH
Full
7 wkts / 181 balls · 3.4% adj (3.9% raw)

MOST LETHAL ZONE (BY RATE)
Yorker/Full / Wide of 6th
3 wkts / 35 balls · 4.1% adj (8.6% raw) · low sample

Most threatening pitching full on the 5th stump (7 wkts, 3.4% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length on the 6th stump.

NEW BALL (≤ 30 OV)

—

· danger length full · 12 wkts off 633 balls

OLD BALL (31+ OV)

good length 5th stump

most lethal cell · 3.6 wkts/100 · danger length good length · 16 wkts off 657 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	633	12	29.7	3.37	52.8	21%	6.99 m
Old ball (31+ ov)	657	16	27.6	4.03	41.1	19%	7.10 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	658	11	35.4	3.55	59.8	20%	7.09 m
Middle (4–7)	420	8	35.8	4.09	52.5	15%	6.64 m
Tail (8–11)	212	9	13.6	3.45	23.6	31%	7.52 m

Bangs it in more with the old ball (3%→7% short); more short balls at the tail (13% vs 3% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

55% of his runs come in boundaries — a boundary every 12 balls; most runs go to the off side (47%); the drive hurts most (50 fours/sixes at 2.6 runs/ball).

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	125	325	43%	50	2.60
Work/Nudge	153	266	35%	26	1.74
Pull/Hook	36	80	11%	13	2.22
Cut	27	58	8%	8	2.15
Slog	8	31	4%	6	3.88

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (369/369) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Runs come mostly on the off side (51%).

Where They Pitch It

Pitches it a good length wide outside off most often (25%); drops short often (28%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 5th stump.

Speed & Spells

He is ~2.4 km/h quicker in later spells, keeps his pace into the 2nd innings, and loses ~1.7 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (99%, 1,278 balls); the round the wicket sample (12 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	1278 (99%)	Wide of 6th	7.0 m	6%	3.72	28	55%
Round	12 (1%)	6th stump	—	—	2.00	0	0%

Over the Wicket

Where he pitches it from over the wicket (1278 balls).

Round the Wicket

Round the wicket — only 12 balls to right-handers, too few to read into.

Sequencing & Over Construction

Variable with his length (length spread ± 2.5 m; more repeatable than 64% of pace bowlers); with no consistent trend to his length across the over; and holds the same crease position through the over.

Across 31 dismissals, the wicket ball lands about 43 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.1 m	2%	3.18	1.4%
Ball 2	7.2 m	5%	4.43	1.8%
Ball 3	7.0 m	6%	2.96	2.8%
Ball 4	7.0 m	8%	3.20	1.4%
Ball 5	7.0 m	7%	3.80	3.3%
Ball 6	6.9 m	5%	4.70	1.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 86% of right-arm pace); releases about 68 cm from the middle stump; varies his spot on the crease a lot (more than 96% of right-arm pace). Comes wider round the wicket (68 cm over vs 88 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	44%	825	3.69	19	26.7	43
Wide (>75cm)	55%	1,024	3.32	17	33.4	60

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	83%	0%	53%	47%
Round the wicket	17%	0%	3%	97%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A swing bowler who swings it away with the new ball (64%) and reverses it back in when it's old (59%).

Generates below avg seam and above avg swing for a pace bowler; seams it away more to right-hand batters (65%).

Swing by ball age to right-hand batters: new ball (≤ 25 ov, n=352) 64% away / 36% in; old ball (≥ 40 ov, n=322) 41% away / 59% in — the swing direction reverses with the old ball.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.89°	61st pct (above avg)	51% away / 49% in
Seam	0.53°	29th pct (below avg)	65% away / 35% in
Bounce	4.1°	59th pct (about average)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (31% of play-and-misses). Overall he beats the bat 8.7% of tracked balls (false-shot 20.1%, n=1,290).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
