Scouting Summary

COMMON THEMES

- Right Fast, averaging 131.2 kph (up to 139.2).
- Typical length is **7-8m** (their good length); median 7.3 m.
- Stock ball is **a good length outside off, swinging in, seaming both ways, passing outside off** (30% of deliveries).
- Goes round the wicket 4% of the time against right-handers.
- Across an over he **varies his length a lot**.

BIGGEST THREATS

- Most dangerous length is **Yorker/Full** (5 wkts, 1.9% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 17% of wickets pitching **a good length on the 6th stump**.
- Beats the bat 6.4% of tracked balls (false-shot 10.6%).
- Gets you **LBW** more than most — 22% of his wickets (1.4× the typical rate for this type).
- 75% of catches are behind the wicket (keeper / slips / gully); most often to keeper, gully, slip: 3rd.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length on the 6th stump** (10% of runs).
- Short ball: 36% of deliveries, economy 3.4 — 10 wkts from 690 short balls.
- Away from yorker/full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (37%) — his main scoring release.
- Cash in when he goes **full outside off** (economy 4.1, beats the bat only 8%).

Bowling Fingerprint

Changing (last 3 years vs career): seam up; repeatability down.

±1.9 m · vs pace bowlers

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 37 in his last 5 Tests vs 46 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	570	9	36.8	3.48	63.3	19%	130	6.50 m

Angle & variations: Round the wicket to LHB (46%), stays over to RHB · slower balls 3.7% (~114 kph)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, swinging in, seaming both ways, passing outside off (30% of deliveries, economy 1.94). Minor variations: full outside off (13%) and a good length wide outside off (10%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	swinging in, seaming both ways	30%	1.94	8	14%
full outside off ▶	swinging in, seaming both ways	13%	4.14	2	8%
a good length wide outside off ▶	swinging in, seaming both ways	10%	2.23	2	14%
a good length in the channel ▶	swinging in, seaming both ways	8%	2.88	3	10%
back of a length outside off ▶	seaming both ways, swinging in	8%	4.07	3	3%
a good length on the stumps ▶	swinging in, seaming both ways	5%	3.71	0	18%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 741 balls · 8 wkts · econ 3.58

Top ball type	%	Econ	Wkts
a good length outside off	29%	2.39	1
full outside off	16%	3.97	0
a good length wide outside off	9%	2.35	1
a good length in the channel	9%	1.81	1

Old ball (31+ ov) · 1,160 balls · 15 wkts · econ 3.39

Top ball type	%	Econ	Wkts
a good length outside off	30%	1.65	7
full outside off	11%	4.30	2
a good length wide outside off	10%	2.16	1
back of a length outside off	9%	4.02	3

Most lethal: **back of length 6th stump** (2.9 wkts/100).

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) [▶ watch danger balls](#)

DANGER LENGTH
Yorker/Full
5 wkts / 234 balls · 1.9% adj (2.1% raw)

MOST LETHAL ZONE (BY RATE)
Yorker/Full / Wide of 6th
3 wkts / 39 balls · 3.4% adj (7.7% raw) · low sample

Most threatening pitching full wide outside off (5 wkts, 1.9% strike). Most wickets come from a good length on the 6th stump, while he leaks the most runs a good length on the 6th stump.

NEW BALL (≤ 30 OV)

—

· danger length yorker/full · 8 wkts off 741 balls

OLD BALL (31+ OV)

back of length 6th stump

most lethal cell · 2.9 wkts/100 · danger length good length · 15 wkts off 1,160 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	741	8	55.2	3.58	92.6	11%	7.07 m
Old ball (31+ ov)	1,160	15	43.7	3.39	77.3	10%	7.52 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	794	9	50.8	3.45	88.2	11%	7.29 m
Middle (4–7)	860	12	40.8	3.42	71.7	10%	7.34 m
Tail (8–11)	247	2	75.0	3.64	123.5	12%	7.59 m

Bangs it in more with the old ball (7%→13% short); more short balls at the tail (21% vs 10% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Batters who profile on top: Steve Smith (RHB, exp avg 83.2).

Scoring Profile (vs right-handers)

54% of his runs come in boundaries — a boundary every 13 balls; most runs go to the off side (37%); the drive hurts most (53 fours/sixes at 2.6 runs/ball).

BOUNDARY %

Direction from ball-tracking (all scoring shots); shot type recorded on 87% of scoring balls (471/542) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around 6th stump and moves it back.

Runs come mostly on the leg side (61%).

Where They Pitch It

Pitches it a good length on the 6th stump most often (15%); drops short often (36%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 6th stump, but strikes most often pitching wide outside off.

Speed & Spells

He is ~1.5 km/h quicker in later spells, is a touch slower in the 2nd innings, and loses ~1.9 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (96%, 1,833 balls); round the wicket is a rare change-up (4%, 68 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	1833 (96%)	6th stump	7.3 m	10%	3.42	22	54%
Round	68 (4%)	Down leg	11.8 m	72%	4.59	1	65%

Over the Wicket

Where he pitches it from over the wicket (1833 balls).

Round the Wicket

Where he pitches it from round the wicket (68 balls).

Sequencing & Over Construction

Variable with his length (length spread ± 2.8 m; more repeatable than 13% of pace bowlers); pitches fuller as the over goes on; and holds the same crease position through the over.

Across 28 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.7 m	11%	3.28	1.3%
Ball 2	7.5 m	13%	4.18	0.6%
Ball 3	7.2 m	12%	2.81	2.2%
Ball 4	7.3 m	11%	2.83	0.6%
Ball 5	7.1 m	11%	3.61	1.6%
Ball 6	7.3 m	12%	4.14	1.0%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 82% of right-arm pace); releases tight to the stumps (48 cm out, tighter than 94% of right-arm pace). Comes wider round the wicket (48 cm over vs 98 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	35%	901	3.50	11	47.8	82
Standard (45–75)	44%	1,124	3.41	10	63.8	112
Wide (>75cm)	21%	533	3.51	11	28.4	48

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	83%	42%	53%	5%
Round the wicket	17%	1%	0%	98%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce.

Generates below avg seam and below avg swing for a pace bowler; seams it in more to right-hand batters (54%).

Swing by ball age to right-hand batters: new ball (≤25 ov, n=349) 33% away / 67% in; old ball (≥40 ov, n=536) 13% away / 87% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.69°	28th pct (below avg)	20% away / 80% in
Seam	0.52°	27th pct (below avg)	45% away / 55% in
Bounce	4.3°	82nd pct (well above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 6th stump** (24% of play-and-misses). Overall he beats the bat 6.4% of tracked balls (false-shot 10.6%, n=1,901).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
