## Scouting Summary

### COMMON THEMES

- Off Spin, averaging 84.2 kph (up to 91.8).
- Typical length is **4-5m** (their good length); median 4.4 m.
- Stock ball is **full outside off, turning in, drifting away, hitting the top of off** (27% of deliveries).
- Goes round the wicket 15% of the time against right-handers.
- Turns it 3.2° on average; 12% of balls turn ≥5°.
- Across an over he **holds a fairly consistent length**.

### BIGGEST THREATS

- Most dangerous length is **Good Length** (43 wkts, 1.9% adjusted strike).
- Danger pitching line: **Wide of 6th** (over the wicket).
- Takes 16% of wickets pitching a **good length on the 6th stump**, over the wicket.
- Beats the bat 3.0% of tracked balls (false-shot 7.4%).
- Wickets come mostly **caught in the field** (55%).
- 24% of catches are behind the wicket (keeper / slips / gully); most often to square leg: short leg, keeper, slip: 1st.
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

### AREAS TO EXPLOIT

- Concedes most runs pitching **full on the 5th stump** (13% of runs).
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (36%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 3.7, beats the bat only 11%).

±1.0 m · vs spin bowlers

**Solid line = career, dotted = last 3 years** (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 35 last 5 vs 32 career).

| Window       | Balls  | Wkts | Avg  | Econ | SR   | False% | Avg speed | Avg length |
|--------------|--------|------|------|------|------|--------|-----------|------------|

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

**Stock ball — full outside off, turning in, drifting away, hitting the top of off (27% of deliveries, economy 2.61). Minor variations: a good length outside off (19%) and full in the channel (12%).**

| Ball type (pitch length × pitching line)       | Movement                  | %   | Econ | Wkts | Beaten % |
|------------------------------------------------|---------------------------|-----|------|------|----------|
| full outside off <a href="#">▶</a>             | turning in, drifting away | 27% | 2.61 | 22   | 6%       |
| a good length outside off <a href="#">▶</a>    | turning in, drifting away | 19% | 2.67 | 22   | 7%       |
| full in the channel <a href="#">▶</a>          | turning in, drifting away | 12% | 2.85 | 8    | 7%       |
| full on the stumps <a href="#">▶</a>           | turning in, drifting away | 11% | 3.00 | 11   | 6%       |
| full wide outside off <a href="#">▶</a>        | turning in, drifting away | 9%  | 3.65 | 9    | 11%      |
| a good length in the channel <a href="#">▶</a> | turning in, drifting away | 6%  | 3.39 | 4    | 7%       |

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

**New ball (≤30 ov)** · 1,677 balls · 24 wkts · econ 3.28

| Top ball type             | %   | Econ | Wkts |
|---------------------------|-----|------|------|
| full outside off          | 25% | 2.86 | 3    |
| a good length outside off | 22% | 2.89 | 6    |
| full in the channel       | 12% | 3.38 | 1    |
| full on the stumps        | 9%  | 2.91 | 2    |

Most lethal: **good length Wide of 6th** (2.9 wkts/100).  
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

**Old ball (31+ ov)** · 5,499 balls · 89 wkts · econ 2.98

| Top ball type             | %   | Econ | Wkts |
|---------------------------|-----|------|------|
| full outside off          | 28% | 2.53 | 19   |
| a good length outside off | 18% | 2.58 | 16   |
| full in the channel       | 12% | 2.68 | 7    |
| full on the stumps        | 12% | 3.02 | 9    |

Most lethal: **good length 6th stump** (2.8 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

**WICKETS — WHERE MOST CAME FROM**  
**A good length on the 6th stump**  
16% of mapped wickets (15 of 94)

**RUNS — WHERE MOST CONCEDED**  
**Full on the 5th stump**  
13% of runs (388 of 2970)

**DANGER LINE**  
**Wide of 6th**  
20 wkts / 882 balls · 2.2% adj (2.3% raw)

**DANGER LENGTH**  
**Good Length**  
43 wkts / 2,281 balls · 1.9% adj (1.9% raw)

**MOST LETHAL ZONE (BY RATE)**  
**Good Length / Wide of 6th**  
11 wkts / 353 balls · 2.8% adj (3.1% raw)

Most threatening pitching a good length wide outside off (43 wkts, 1.9% strike). Most wickets come from a good length on the 6th stump, while he leaks the most runs full on the 5th stump.

## Danger by ball age

NEW BALL ( $\leq 30$  OV)

### good length Wide of 6th

most lethal cell · 2.9 wkts/100 · danger length good length · 24 wkts off 1,677 balls

OLD BALL (31+ OV)

### good length 6th stump

most lethal cell · 2.8 wkts/100 · danger length good length · 89 wkts off 5,499 balls

Match-ups (vs right-handers)

New ball vs old ball

| Split             | Balls | Wkts | Avg  | Econ | SR   | False% | Med length |
|-------------------|-------|------|------|------|------|--------|------------|
| New ball (≤30 ov) | 1,677 | 24   | 38.2 | 3.28 | 69.9 | 8%     | 4.87 m     |
| Old ball (31+ ov) | 5,499 | 89   | 30.7 | 2.98 | 61.8 | 7%     | 4.70 m     |

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

| Split           | Balls | Wkts | Avg  | Econ | SR   | False% | Med length |
|-----------------|-------|------|------|------|------|--------|------------|
| Top order (1–3) | 2,337 | 28   | 47.5 | 3.41 | 83.5 | 6%     | 4.79 m     |
| Middle (4–7)    | 3,614 | 45   | 38.4 | 2.87 | 80.3 | 6%     | 4.71 m     |
| Tail (8–11)     | 1,225 | 40   | 14.8 | 2.90 | 30.6 | 12%    | 4.75 m     |

Scoring Profile (vs right-handers)

44% of his runs come in boundaries — a boundary every 20 balls; most runs go to the leg side (36%); the drive hurts most (77 fours/sixes at 2.1 runs/ball).

| Ramp/Scoop | 7     | 11   | 0%     | 1     | 1.57      |

Direction from ball-tracking (all scoring shots); shot type recorded on 66% of scoring balls (1356/2059) — groups with <5 balls omitted.

Pitch Maps & Scoring

## Where They Pitch It

Pitches it full on the 5th stump most often (14%); rarely drops short (0%).

## Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 6th stump, but strikes most often pitching wide outside off.

## Speed & Spells

He drops ~1.8 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

### Speed by Spell

By spell — opening burst vs later spells.

### Speed by Innings

1st vs 2nd innings of the match.

### Speed by Day

By match day — fatigue across the game.

## Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (85%, 6,110 balls); round the wicket is a rare change-up (15%, 1066 balls).

| Angle | Balls      | Pitch line | Length | Short % | Econ | Wkts | Bdry % |
|-------|------------|------------|--------|---------|------|------|--------|
| Over  | 6110 (85%) | Stumps     | 4.8 m  | 0%      | 2.99 | 97   | 43%    |
| Round | 1066 (15%) | Stumps     | 4.6 m  | 0%      | 3.40 | 16   | 49%    |

### Over the Wicket

Where he pitches it from over the wicket (6110 balls).

### Round the Wicket

Where he pitches it from round the wicket (1066 balls).

## Sequencing & Over Construction

Consistent with his length (length spread  $\pm 1.1$  m; more repeatable than 73% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Takes his wickets with the stock ball rather than obvious set-ups.

Across 138 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

| Ball in over | Median length | Short % | Econ | Wkt % |
|--------------|---------------|---------|------|-------|
| Ball 1       | 4.8 m         | 0%      | 2.87 | 1.4%  |
| Ball 2       | 4.8 m         | 0%      | 3.16 | 2.0%  |
| Ball 3       | 4.7 m         | 0%      | 3.29 | 1.4%  |
| Ball 4       | 4.7 m         | 0%      | 3.20 | 1.8%  |
| Ball 5       | 4.7 m         | 0%      | 2.89 | 1.9%  |
| Ball 6       | 4.8 m         | 0%      | 2.91 | 0.9%  |

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 81% of right-arm spin); releases tight to the stumps (54 cm out, tighter than 80% of right-arm spin); varies his spot on the crease a lot (more than 76% of right-arm spin). Comes wider round the wicket (54 cm over vs 92 cm round).

| Crease position  | % balls | Balls | Econ | Wkts | Avg  | SR |
|------------------|---------|-------|------|------|------|----|
| Tight (<45cm)    | 6%      | 666   | 2.98 | 7    | 47.3 | 95 |
| Standard (45–75) | 42%     | 4,476 | 3.01 | 75   | 29.9 | 60 |
| Wide (>75cm)     | 51%     | 5,405 | 3.15 | 82   | 34.6 | 66 |

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

| Angle            | Balls | Tight | Standard | Wide |
|------------------|-------|-------|----------|------|
| Over the wicket  | 54%   | 12%   | 77%      | 12%  |
| Round the wicket | 46%   | 0%    | 3%       | 97%  |

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs right-handers)

Not a big spinner — relies on flight, drift and accuracy.

Generates below avg turn and about average drift for a spin bowler; turns it in more to right-hand batters (96%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

| Movement | Avg   | vs average               | Direction (vs right-handers) |
|----------|-------|--------------------------|------------------------------|
| Drift    | 1.63° | 49th pct (about average) | 96% away / 4% in             |
| Turn     | 3.17° | 29th pct (below avg)     | 3% away / 97% in             |
| Bounce   | 4.4°  | 54th pct (about average) | —                            |

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / 4th stump** (13% of play-and-misses). Overall he beats the bat 3.0% of tracked balls (false-shot 7.4%, n=6,969).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
