Scouting Summary

COMMON THEMES

- Off Spin, averaging 85.2 kph (up to 94.2).
- Typical length is **4-5m** (their good length); median 4.4 m.
- Stock ball is **full outside off, turning in, drifting away, hitting the stumps** (26% of deliveries).
- Goes round the wicket 20% of the time against right-handers.
- Round the wicket** he shifts his pitching line from wide of 6th to stumps.
- Turns it 4.4° on average; 30% of balls turn ≥5°.
- Across an over he **repeats his length ball after ball**.

BIGGEST THREATS

- Most dangerous length is **Full** (19 wkts, 2.0% adjusted strike).
- Danger pitching line: **Stumps** (over the wicket).
- Takes 24% of wickets pitching **full wide outside off**.
- Beats the bat 3.1% of tracked balls (false-shot 6.9%).
- Gets you **bowled** more than most — 24% of his wickets (1.4× the typical rate for this type).
- 40% of catches are behind the wicket (keeper / slips / gully); most often to keeper, long on: regulation, square leg: deep backward.
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (24% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (40%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 4.5, beats the bat only 8%).

Bowling Fingerprint

Changing (last 3 years vs career): crease variation down; drift down; turn down.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 30 last 5 vs 29 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	61%	58%	1.04×
Bowled	24%	17%	1.43×
LBW	15%	20%	0.78×

Share of his 33 wickets by type, indexed against the base rate vs the average spin bowler to RHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 7](#) [Long on: regulation 2](#) [Square leg: deep backward 2](#) [Square leg: short leg 1](#) [Long off: regulation 1](#) [Midwicket: deep 1](#)

Angle & variations: Mostly over the wicket (round LHB 96% · RHB 19%)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — full outside off, turning in, drifting away, hitting the stumps (26% of deliveries, economy 2.52). Minor variations: full wide outside off (20%) and a good length outside off (17%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full outside off ▶	turning in, drifting away	26%	2.52	8	6%
full wide outside off ▶	turning in, drifting away	20%	4.47	6	8%
a good length outside off ▶	turning in, drifting away	17%	3.50	4	5%
full in the channel ▶	turning in, drifting away	8%	2.54	3	7%
a good length wide outside off ▶	turning in, drifting away	8%	3.40	0	2%
full on the stumps ▶	turning in, drifting away	8%	3.53	1	6%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 475 balls · 7 wkts · econ 3.54

Top ball type	%	Econ	Wkts
full outside off	30%	2.02	1
full wide outside off	23%	4.12	1
a good length outside off	19%	4.15	1
full in the channel	8%	3.87	0

Old ball (31+ ov) · 1,274 balls · 26 wkts · econ 3.17

Top ball type	%	Econ	Wkts
full outside off	25%	2.75	7
full wide outside off	19%	4.64	5
a good length outside off	17%	3.22	3
a good length wide outside off	9%	3.42	0

Most lethal: **full 4th stump** (2.6 wkts/100).

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
Full wide outside off

DANGER LINE
Stumps
10 wkts / 421 balls · 2.3% adj (2.4% raw)

DANGER LENGTH
Full
19 wkts / 952 balls · 2.0% adj (2.0% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 5th stump
3 wkts / 118 balls · 2.2% adj (2.5% raw) · low sample

Most threatening pitching full on the stumps (19 wkts, 2.0% strike). Most wickets come from full wide outside off, while he leaks the most runs full wide outside off.

Zone shares are over his **mapped** wickets — 8 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

NEW BALL (≤ 30 OV)

—

· danger length full · 7 wkts off 475 balls

OLD BALL (31+ OV)

full 4th stump

most lethal cell · 2.6 wkts/100 · danger length full · 26 wkts off 1,274 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	475	7	40.0	3.54	67.9	8%	4.64 m
Old ball (31+ ov)	1,274	26	25.9	3.17	49.0	7%	4.66 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	460	9	30.6	3.59	51.1	7%	4.64 m
Middle (4–7)	969	18	29.1	3.24	53.8	7%	4.66 m
Tail (8–11)	320	6	25.7	2.89	53.3	7%	4.67 m

Scoring Profile (vs right-handers)

47% of his runs come in boundaries — a boundary every 17 balls; most runs go to the leg side (40%); the drive hurts most (23 fours/sixes at 2.1 runs/ball).

Cut	34	65	9%	7	1.91

Direction from ball-tracking (all scoring shots); shot type recorded on 75% of scoring balls (390/517) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full wide outside off most often (19%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full wide outside off, but strikes most often pitching on the stumps.

Speed & Spells

He drops ~2.1 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Round the wicket his pitching line moves from wide of 6th to stumps — economy 3.30→3.14, a wicket every 56→43 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	1407 (80%)	Wide of 6th	4.7 m	0%	3.30	25	49%
Round	342 (20%)	Stumps	4.5 m	0%	3.14	8	38%

Over the Wicket

Where he pitches it from over the wicket (1407 balls).

Round the Wicket

Where he pitches it from round the wicket (342 balls).

Sequencing & Over Construction

Relentlessly consistent — repeats his length ball after ball (length spread ± 0.9 m; more repeatable than 79% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Often strikes with a shorter ball than the previous one (22% of dismissals).

Across 31 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.8 m	0%	3.87	2.1%
Ball 2	4.5 m	0%	2.90	2.7%
Ball 3	4.6 m	0%	4.10	1.7%
Ball 4	4.6 m	0%	2.72	1.4%
Ball 5	4.7 m	0%	3.03	2.1%
Ball 6	4.8 m	0%	3.03	1.3%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 89% of right-arm spin); releases about 69 cm from the middle stump.

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	46%	1,213	3.49	23	30.7	53
Wide (>75cm)	53%	1,404	2.80	24	27.3	58

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	54%	1%	66%	33%
Round the wicket	46%	0%	22%	77%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs right-handers)

A big turner of the ball; skids it on with lower bounce.

Generates above avg turn and about average drift for a spin bowler; turns it in more to right-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Drift	1.73°	59th pct (about average)	99% away / 1% in
Turn	4.38°	79th pct (above avg)	0% away / 100% in
Bounce	4.1°	27th pct (below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / 6th stump** (28% of play-and-misses). Overall he beats the bat 3.1% of tracked balls (false-shot 6.9%, n=1,749).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
