Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 81.7 kph (up to 91.4).
- Typical length is **4-5m** (their good length); median 4.3 m.
- Stock ball is **full on the stumps, turning away, drifting in, hitting the stumps** (26% of deliveries).
- Goes round the wicket 94% of the time against right-handers.
- Turns it 2.7° on average; 7% of balls turn ≥5°.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Full** (19 wkts, 1.5% adjusted strike).
- Danger pitching line: **4th stump** (round the wicket).
- Takes 28% of wickets pitching **full in the 4th-stump channel**, round the wicket.
- Beats the bat 3.7% of tracked balls (false-shot 7.6%).
- Gets you **LBW** more than most — 31% of his wickets (1.6× the typical rate for this type).
- 46% of catches are behind the wicket (keeper / slips / gully); most often to keeper, fine leg: deep, slip: 1st.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (19% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak straight down the ground (44%) — his main scoring release.
- Cash in when he goes **good length outside off** (economy 3.7, beats the bat only 8%).

Bowling Fingerprint

Changing (last 3 years vs career): repeatability down; crease width down.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 43 in his last 5 Tests vs 32 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	900	13	42.8	3.71	69.2	10%	84	4.22 m
Career	3,164	47	32.0	2.86	67.3	8%	82	4.58 m

Midwicket: regulation 1

Angle & variations: Round the wicket to RHB (94%), stays over to LHB

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps, turning away, drifting in, hitting the stumps (26% of deliveries, economy 2.34). Minor variations: full in the channel (17%) and full outside off (16%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	turning away, drifting in	26%	2.34	7	7%
full in the channel ▶	turning away, drifting in	17%	1.73	9	4%
full outside off ▶	turning away, drifting in	16%	2.94	5	6%
a good length outside off ▶	turning away, drifting in	13%	3.70	4	8%
a good length on the stumps ▶	turning away, drifting in	9%	2.84	1	9%
a good length in the channel ▶	turning away, drifting in	8%	2.41	2	6%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 598 balls · 7 wkts · econ 2.98

Top ball type	%	Econ	Wkts
full on the stumps	25%	3.18	1
full in the channel	18%	2.04	5
full outside off	16%	3.66	1
a good length outside off	13%	4.12	0

Most lethal: **full 4th stump** (3.7 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 1,861 balls · 25 wkts · econ 2.52

Top ball type	%	Econ	Wkts
full on the stumps	27%	2.08	6
full in the channel	17%	1.63	4
full outside off	16%	2.70	4
a good length outside off	13%	3.56	4

Most lethal: **full 5th stump** (2.2 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM

Full in the 4th-stump channel

28% of mapped wickets (8 of 29)

RUNS — WHERE MOST CONCEDED

Full on the stumps

19% of runs (180 of 961)

DANGER LINE

4th stump

11 wkts / 523 balls · 2.0% adj (2.1% raw)

DANGER LENGTH

Full

19 wkts / 1,237 balls · 1.5% adj (1.5% raw)

MOST LETHAL ZONE (BY RATE)

Full / 4th stump

8 wkts / 313 balls · 2.3% adj (2.6% raw)

Most threatening pitching full in the 4th-stump channel (19 wkts, 1.5% strike). Most wickets come from full in the 4th-stump channel, while he leaks the most runs full on the stumps.

Danger by ball age

NEW BALL (≤ 30 OV)

full 4th stump

most lethal cell · 3.7 wkts/100 · danger length full · 7 wkts off 598 balls

OLD BALL (31+ OV)

full 5th stump

most lethal cell · 2.2 wkts/100 · danger length good length · 25 wkts off 1,861 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	598	7	42.4	2.98	85.4	9%	4.60 m
Old ball (31+ ov)	1,861	25	31.3	2.52	74.4	7%	4.56 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	654	7	40.9	2.62	93.4	5%	4.48 m
Middle (4–7)	1,409	17	36.7	2.66	82.9	7%	4.60 m
Tail (8–11)	396	8	21.2	2.58	49.5	15%	4.62 m

Scoring Profile (vs right-handers)

45% of his runs come in boundaries — a boundary every 22 balls; most runs go to straight down the ground (44%); the sweep hurts most (34 fours/sixes at 2.7 runs/ball).

BOUNDARY %
45%
runs in 4s/6s

ROTATED %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	175	271	29%	24	1.55
Work/Nudge	191	255	27%	8	1.34
Sweep	70	190	20%	34	2.71
Cut	47	89	9%	10	1.89
Slog	18	75	8%	14	4.17
Pull/Hook	15	47	5%	9	3.13
Ramp/Scoop	7	19	2%	3	2.71

Direction from ball-tracking (all scoring shots); shot type recorded on 90% of scoring balls (541/604) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the stumps most often (23%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full in the 4th-stump channel, but strikes most often pitching in the 4th-stump channel.

Speed & Spells

He holds his pace across spells, is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively round the wicket to right-handers (94%, 2,314 balls); over the wicket is a rare change-up (6%, 145 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	145 (6%)	Down leg	4.8 m	0%	2.15	1	46%
Round	2314 (94%)	Stumps	4.6 m	0%	2.67	31	45%

Over the Wicket

Where he pitches it from over the wicket (145 balls).

Round the Wicket

Where he pitches it from round the wicket (2314 balls).

Sequencing & Over Construction

Consistent with his length (length spread ± 1.3 m; more repeatable than 48% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 34 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.6 m	0%	2.49	1.8%
Ball 2	4.6 m	0%	2.56	2.0%
Ball 3	4.6 m	0%	3.04	1.5%
Ball 4	4.6 m	0%	2.69	1.0%
Ball 5	4.5 m	0%	2.21	0.7%
Ball 6	4.6 m	0%	2.82	0.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 75 cm from the middle stump; varies his spot on the crease a lot (more than 95% of left-arm spin). Comes wider round the wicket (58 cm over vs 75 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	24%	531	3.48	6	51.3	88
Wide (>75cm)	76%	1,696	2.77	24	32.6	71

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	20%	0%	84%	16%
Round the wicket	80%	0%	9%	91%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs right-handers)

Not a big spinner — relies on flight, drift and accuracy; extracts steep bounce.

Generates well below avg turn and about average drift for a spin bowler; turns it away more to right-hand batters (90%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Drift	1.57°	42nd pct (about average)	9% away / 91% in
Turn	2.67°	13th pct (well below avg)	90% away / 10% in
Bounce	5.1°	96th pct (well above avg)	—

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wks to qualify).
