Scouting Summary

COMMON THEMES

- Left Fast, averaging 129.3 kph (up to 137.3).
- Typical length is **7-8m** (their good length); median 7.3 m.
- Stock ball is **a good length wide outside off, swinging away, seaming both ways, passing outside off** (19% of deliveries).
- Goes round the wicket 40% of the time against right-handers.
- Round the wicket** he shifts his pitching line from stumps to wide of 6th.
- Across an over he **varies his length a lot**, banging it in more as the over goes on.

BIGGEST THREATS

- Most dangerous length is **Full** (5 wkts, 2.6% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 31% of wickets pitching **a good length wide outside off**.
- Beats the bat 5.9% of tracked balls (false-shot 10.4%).
- Gets you **caught behind** more than most — 88% of his wickets (1.3× the typical rate for this type).
- 71% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 3rd, cover: short extra.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (18% of runs).
- Short ball: 32% of deliveries, economy 3.8 — 4 wkts from 323 short balls.
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak straight down the ground (42%) — his main scoring release.

Bowling Fingerprint

Changing (last 3 years vs career): swing up; repeatability down; crease width down.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 38 last 5 vs 36 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, swinging away, seaming both ways, passing outside off (19% of deliveries, economy 3.02). Minor variations: a good length on the stumps (16%) and a good length down the leg side (10%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	swinging away, seaming both ways	19%	3.02	5	12%
a good length on the stumps ▶	swinging both ways, seaming back	16%	1.40	3	9%
a good length down the leg side ▶	swinging both ways, seaming back	10%	2.30	1	15%
a good length outside off ▶	swinging both ways, seaming both ways	9%	1.09	0	9%
full on the stumps ▶	swinging both ways, seaming back	8%	5.01	1	8%
full wide outside off ▶	swinging away, seaming both ways	7%	4.35	1	6%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 472 balls · 8 wkts · econ 2.52

Top ball type	%	Econ	Wkts
a good length on the stumps	24%	1.30	1
a good length down the leg side	13%	2.26	1
a good length wide outside off	11%	2.12	2
full on the stumps	11%	5.52	1

Old ball (31+ ov) · 549 balls · 8 wkts · econ 3.49

Top ball type	%	Econ	Wkts
a good length wide outside off	26%	3.34	3
a good length outside off	11%	1.24	0
full wide outside off	10%	4.50	1
a good length on the stumps	10%	1.62	2

*Most lethal: **good length Wide of 6th** (1.9 wkts/100).*

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length wide outside off

DANGER LINE
Wide of 6th
6 wkts / 335 balls · 1.7% adj (1.8% raw)

DANGER LENGTH
Full
5 wkts / 161 balls · 2.6% adj (3.1% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / Wide of 6th
5 wkts / 191 balls · 2.3% adj (2.6% raw)

Most threatening pitching full wide outside off (5 wkts, 2.6% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.

Danger by ball age

NEW BALL (≤30 OV)

—

· danger length good length · 8 wkts off 472 balls

OLD BALL (31+ OV)

good length Wide of 6th

most lethal cell · 1.9 wkts/100 · danger length full · 8 wkts off 549 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	472	8	24.8	2.52	59.0	10%	7.20 m
Old ball (31+ ov)	549	8	39.9	3.49	68.6	11%	7.33 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	421	5	32.2	2.29	84.2	11%	7.19 m
Middle (4–7)	511	9	33.8	3.57	56.8	10%	7.27 m

Bangs it in more with the old ball (5%→13% short); more short balls at the tail (26% vs 6% to the top 3); more yorkers/full at the tail (12%).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

44% of his runs come in boundaries — a boundary every 18 balls; most runs go to straight down the ground (42%); the drive hurts most (23 fours/sixes at 2.5 runs/ball).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	115	176	36%	9	1.53
Drive	64	160	33%	23	2.50
Pull/Hook	48	103	21%	14	2.15
Cut	13	33	7%	6	2.54

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (265/265) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at 6th stump — pitches around wide of 6th and moves it back.

Runs come mostly on the leg side (63%).

Where They Pitch It

Pitches it a good length wide outside off most often (18%); drops short often (31%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching wide outside off.

Speed & Spells

He is ~3.5 km/h quicker in later spells, is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 2.86→3.30, a wicket every 68→59 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	608 (60%)	Stumps	7.2 m	9%	2.86	9	44%
Round	413 (40%)	Wide of 6th	7.3 m	11%	3.30	7	45%

Over the Wicket

Where he pitches it from over the wicket (608 balls).

Round the Wicket

Where he pitches it from round the wicket (413 balls).

Sequencing & Over Construction

Variable with his length (length spread ±2.5 m; more repeatable than 54% of pace bowlers); tends to bang it in later in the over (short 6%→11% by the 5th–6th ball); and holds the same crease position through the over.

Across 19 dismissals, the wicket ball lands about 28 cm shorter than the ball before it — that’s the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.0 m	3%	3.34	2.8%
Ball 2	7.4 m	8%	2.35	2.8%
Ball 3	7.3 m	11%	3.76	0.0%
Ball 4	7.5 m	14%	2.57	1.8%
Ball 5	7.1 m	9%	3.31	1.2%
Ball 6	7.4 m	13%	2.91	0.0%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 76% of left-arm pace); releases about 54 cm from the middle stump; varies his spot on the crease a lot (more than 80% of left-arm pace). Comes wider round the wicket (54 cm over vs 89 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	7%	125	3.07	1	64.0	125
Standard (45–75)	66%	1,244	3.01	19	32.9	65
Wide (>75cm)	27%	506	3.27	7	39.4	72

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	78%	9%	85%	7%
Round the wicket	22%	0%	1%	99%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce.

Generates about average seam and about average swing for a pace bowler; seams it in more to right-hand batters (58%).

Swing by ball age to right-hand batters: new ball (≤25 ov, n=339) 54% away / 46% in; old ball (≥40 ov, n=232) 70% away / 30% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.80°	47th pct (about average)	62% away / 38% in
Seam	0.55°	42nd pct (about average)	41% away / 59% in
Bounce	4.3°	81st pct (well above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (22% of play-and-misses). Overall he beats the bat 5.9% of tracked balls (false-shot 10.4%, n=1,021).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
