Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 83.8 kph (up to 92.6).
- Typical length is **4-5m** (their good length); median 4.4 m.
- Stock ball is **full on the stumps, turning away, drifting in, hitting the stumps** (29% of deliveries).
- Goes round the wicket 96% of the time against right-handers.
- Turns it 3.9° on average; 21% of balls turn ≥5°.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Full** (106 wkts, 1.8% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 33% of wickets pitching **full on the stumps**, round the wicket.
- Beats the bat 3.2% of tracked balls (false-shot 8.6%).
- Gets you **LBW** more than most — 26% of his wickets (1.3× the typical rate for this type).
- 29% of catches are behind the wicket (keeper / slips / gully); most often to keeper, square leg; short leg, point: silly.
- Very repeatable with his length — using your feet to change his length is more effective than waiting for a loose ball.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (23% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (38%) — his main scoring release.
- Cash in when he goes **good length outside off** (economy 4.2, beats the bat only 7%).

Bowling Fingerprint

Changing (last 3 years vs career): repeatability down; drift down; crease width down.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 22 in his last 5 Tests vs 29 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	1,410	33	22.3	3.13	42.7	17%	83	4.79 m

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps, turning away, drifting in, hitting the stumps (29% of deliveries, economy 2.35). Minor variations: full in the channel (20%) and full outside off (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	turning away, drifting in	29%	2.35	51	7%
full in the channel ▶	turning away, drifting in	20%	2.06	32	9%
full outside off ▶	turning away, drifting in	13%	3.16	19	9%
a good length in the channel ▶	turning away, drifting in	10%	2.98	16	10%
a good length outside off ▶	turning away, drifting in	9%	4.17	13	7%
a good length on the stumps ▶	turning away, drifting in	9%	2.78	11	9%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 2,907 balls · 57 wkts · econ 2.77

Top ball type	%	Econ	Wkts
full on the stumps	30%	2.00	18
full in the channel	19%	2.17	14
full outside off	13%	3.95	5
a good length in the channel	11%	3.11	4

Most lethal: **full 4th stump** (2.7 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 7,205 balls · 115 wkts · econ 2.87

Top ball type	%	Econ	Wkts
full on the stumps	29%	2.50	33
full in the channel	20%	2.01	18
full outside off	13%	2.84	14
a good length in the channel	9%	2.92	12

Most lethal: **full 6th stump** (3.1 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM

Full on the stumps

33% of mapped wickets (51 of 154)

RUNS — WHERE MOST CONCEDED

Full on the stumps

23% of runs (968 of 4200)

DANGER LINE

Wide of 6th

3 wkts / 123 balls · 2.1% adj (2.4% raw) · low sample

DANGER LENGTH

Full

106 wkts / 5,881 balls · 1.8% adj (1.8% raw)

MOST LETHAL ZONE (BY RATE)

Good Length / Wide of 6th

3 wkts / 51 balls · 3.3% adj (5.9% raw) · low sample

Most threatening pitching full wide outside off (106 wkts, 1.8% strike). Most wickets come from full on the stumps, while he leaks the most runs full on the stumps.

Danger by ball age

NEW BALL (≤ 30 OV)

full 4th stump

most lethal cell · 2.7 wkts/100 · danger length full · 57 wkts off 2,907 balls

OLD BALL (31+ OV)

full 6th stump

most lethal cell · 3.1 wkts/100 · danger length good length · 115 wkts off 7,205 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	2,907	57	23.5	2.77	51.0	9%	4.60 m
Old ball (31+ ov)	7,205	115	30.0	2.87	62.7	8%	4.54 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	3,586	55	29.8	2.74	65.2	8%	4.58 m
Middle (4–7)	5,048	68	35.6	2.87	74.2	7%	4.54 m
Tail (8–11)	1,478	49	15.0	2.98	30.2	14%	4.57 m

Scoring Profile (vs right-handers)

48% of his runs come in boundaries — a boundary every 19 balls; most runs go to the off side (38%); the drive hurts most (115 fours/sixes at 1.8 runs/ball).

BOUNDARY %

Pull/Hook	39	120	4%	24	3.08

Direction from ball-tracking (all scoring shots); shot type recorded on 66% of scoring balls (1694/2560) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the stumps most often (27%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps, but strikes most often pitching wide outside off.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively round the wicket to right-handers (96%, 9,701 balls); over the wicket is a rare change-up (4%, 411 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	411 (4%)	Down leg	4.5 m	0%	2.80	10	39%
Round	9701 (96%)	Stumps	4.6 m	0%	2.84	162	49%

Over the Wicket

Where he pitches it from over the wicket (411 balls).

Round the Wicket

Where he pitches it from round the wicket (9701 balls).

Sequencing & Over Construction

Consistent with his length (length spread ± 1.1 m; more repeatable than 66% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

And tends to strike with a straighter ball after working across the batter (34% straighter than the ball before).

Across 159 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.6 m	0%	3.27	2.1%
Ball 2	4.6 m	0%	3.12	1.8%
Ball 3	4.6 m	0%	2.70	2.3%
Ball 4	4.6 m	0%	2.70	1.4%
Ball 5	4.5 m	0%	2.82	1.3%
Ball 6	4.5 m	0%	2.46	1.4%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 83% of left-arm spin); releases about 85 cm from the middle stump; varies his spot on the crease a lot (more than 79% of left-arm spin). Comes wider round the wicket (58 cm over vs 85 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	1%	157	3.97	3	34.7	52
Standard (45–75)	30%	3,480	3.19	57	32.5	61
Wide (>75cm)	69%	8,129	2.90	140	28.1	58

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	20%	6%	65%	29%
Round the wicket	80%	0%	20%	79%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs right-handers)

A big turner of the ball; extracts steep bounce.

Generates above avg turn and about average drift for a spin bowler; turns it away more to right-hand batters (98%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Drift	1.64°	50th pct (about average)	2% away / 98% in
Turn	3.87°	63rd pct (above avg)	98% away / 2% in
Bounce	4.4°	61st pct (above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / 4th stump** (21% of play-and-misses). Overall he beats the bat 3.2% of tracked balls (false-shot 8.6%, n=9,945).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
