Scouting Summary

COMMON THEMES

- Right Fast, averaging 133.8 kph (up to 142.0).
- Typical length is **6-7m** (their good length); median 6.7 m.
- Stock ball is a **good length wide outside off**, **swinging both ways**, **seaming both ways**, **passing outside off** (38% of deliveries).
- Goes round the wicket 1% of the time against right-handers.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Good Length** (20 wkts, 2.4% adjusted strike).
- Danger pitching line: **6th stump**.
- Takes 42% of wickets pitching a **good length wide outside off**, over the wicket.
- Beats the bat 7.7% of tracked balls (false-shot 15.7%).
- Gets you **bowled** more than most — 26% of his wickets (1.3× the typical rate for this type).
- 65% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 1st, cover: short extra.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (32% of runs).
- Short ball: 26% of deliveries, economy 4.6 — 7 wkts from 427 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (45%) — his main scoring release.
- Cash in when he goes **back of a length wide outside off** (economy 5.5, beats the bat only 12%).

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 22 in his last 5 Tests vs 31 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	65%	65%	0.99×
Bowled	26%	19%	1.34×
LBW	10%	15%	0.63×

Share of his 31 wickets by type, indexed against the base rate vs the average pace bowler to RHB (men's Tests). **Index >1** = he does it more than most, <**1** = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 8](#) [Slip: 1st 2](#) [Cover: short extra 2](#) [Mid off: regulation 2](#) [Slip: 3rd 2](#) [Midwicket: deep 1](#)

Angle & variations: Round the wicket to LHB (36%), stays over to RHB · slower balls 2.6% (~116 kph)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, swinging both ways, seaming both ways, passing outside off (38% of deliveries, economy 2.62). Minor variations: a good length outside off (21%) and full outside off (10%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	swinging both ways, seaming both ways	38%	2.62	11	15%
a good length outside off ▶	swinging both ways, seaming away	21%	1.31	7	16%
full outside off ▶	swinging in, seaming away	10%	4.02	2	11%
back of a length wide outside off ▶	seaming both ways, swinging in	10%	5.49	2	12%
full wide outside off ▶	swinging both ways, seaming away	7%	3.60	1	28%
back of a length outside off ▶	swinging in, seaming both ways	3%	4.80	1	18%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 570 balls · 10 wkts · econ 3.32

Top ball type	%	Econ	Wkts
a good length wide outside off	41%	2.01	7
a good length outside off	22%	1.11	2
full outside off	10%	5.00	0
back of a length wide outside off	8%	6.16	0

Most lethal: **good length Wide of 6th** (3.1 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 1,098 balls · 21 wkts · econ 3.03

Top ball type	%	Econ	Wkts
a good length wide outside off	36%	3.00	4
a good length outside off	20%	1.43	5
back of a length wide outside off	11%	5.21	2
full outside off	10%	3.46	2

Most lethal: **good length 6th stump** (2.7 wkts/100).

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST COME FROM
A good length wide outside off
42% of mapped wickets (11 of 26)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
32% of runs (235 of 738)

DANGER LINE
6th stump
7 wkts / 317 balls · 2.1% adj (2.2% raw)

DANGER LENGTH
Good Length
20 wkts / 835 balls · 2.4% adj (2.4% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 6th stump
5 wkts / 194 balls · 2.4% adj (2.6% raw)

Most threatening pitching a good length on the 6th stump (20 wkts, 2.4% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.
Zone shares are over his **mapped** wickets — 5 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

NEW BALL (≤ 30 OV)

good length Wide of 6th

most lethal cell · 3.1 wkts/100 · danger length good length · 10 wkts off 570 balls

OLD BALL (31+ OV)

good length 6th stump

most lethal cell · 2.7 wkts/100 · danger length back of length · 21 wkts off 1,098 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	570	10	31.5	3.32	57.0	12%	7.05 m
Old ball (31+ ov)	1,098	21	26.4	3.03	52.3	18%	7.31 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	710	10	32.1	2.71	71.0	13%	7.12 m
Middle (4–7)	716	11	38.3	3.53	65.1	15%	7.26 m
Tail (8–11)	242	10	12.8	3.17	24.2	27%	7.26 m

Bangs it in more with the old ball (2%→13% short); more short balls at the tail (17% vs 5% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

53% of his runs come in boundaries — a boundary every 15 balls; most runs go to the off side (45%); the drive hurts most (41 fours/sixes at 2.5 runs/ball).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	102	260	35%	41	2.55
Work/Nudge	152	256	34%	18	1.68
Pull/Hook	48	115	15%	18	2.40
Cut	35	83	11%	15	2.37
Slog	7	24	3%	4	3.43

Direction from ball-tracking (all scoring shots); shot type recorded on 90% of scoring balls (368/410) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Runs come mostly on the leg side (50%).

Where They Pitch It

Pitches it a good length wide outside off most often (37%); mixes in the short ball (25%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 6th stump.

Speed & Spells

He drops ~2.3 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (99%, 1,649 balls); the round the wicket sample (19 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	1649 (99%)	Wide of 6th	7.2 m	9%	3.11	31	53%
Round	19 (1%)	Stumps	—	—	4.74	0	53%

Over the Wicket

Where he pitches it from over the wicket (1649 balls).

Round the Wicket

Round the wicket — only 19 balls to right-handers, too few to read into.

Sequencing & Over Construction

Moderately consistent with his length (length spread ± 2.1 m; more repeatable than 46% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 28% of the time after banging one in; and tends to strike with a straighter ball after working across the batter (31% straighter than the ball before).

Across 38 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.4 m	6%	3.27	1.5%
Ball 2	7.3 m	9%	3.16	1.1%
Ball 3	7.2 m	8%	3.17	2.2%
Ball 4	7.3 m	8%	2.95	2.5%
Ball 5	7.0 m	8%	2.88	2.5%
Ball 6	7.1 m	6%	3.16	1.4%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 68 cm from the middle stump; varies his spot on the crease a lot (more than 98% of right-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	51%	1,244	3.53	18	40.7	69
Wide (>75cm)	49%	1,198	3.16	25	25.2	48

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	84%	0%	52%	48%
Round the wicket	16%	0%	46%	54%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs right-handers)

A moderate mover of the ball.

Generates below avg seam and about average swing for a pace bowler; seams it away more to right-hand batters (64%).

Swing by ball age to right-hand batters: new ball (≤25 ov, n=246) 52% away / 48% in; old ball (≥40 ov, n=453) 32% away / 68% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs right-handers)
Swing	0.79°	46th pct (about average)	37% away / 63% in
Seam	0.54°	34th pct (below avg)	64% away / 36% in
Bounce	4.0°	41st pct (about average)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (38% of play-and-misses). Overall he beats the bat 7.7% of tracked balls (false-shot 15.7%, n=1,668).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
