## Scouting Summary

### COMMON THEMES

- Right Medium, averaging 122.4 kph (up to 131.5).
- Typical length is **6-7m** (their good length); median 4.8 m.
- Stock ball is **a good length on the stumps, swinging, seaming, passing outside off** (15% of deliveries).
- Goes round the wicket 30% of the time against left-handers.

### BIGGEST THREATS

- Beats the bat 3.8% of tracked balls (false-shot 9.3%).

### AREAS TO EXPLOIT

- Concedes most runs pitching **a good length down the leg side** (17% of runs).
- Short ball: 12% of deliveries, economy 3.0 — 0 wkts from 22 short balls.
- Most of his runs leak through the leg side (50%) — his main scoring release.
- Cash in when he goes **full outside off** (economy 4.5).

## Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 60 in his last 5 Tests vs 101 career).

| Window       | Balls | Wkts | Avg   | Econ | SR    | False% | Avg speed | Avg length |
|--------------|-------|------|-------|------|-------|--------|-----------|------------|
| Last 5 Tests | 120   | 1    | 60.0  | 3.00 | 120.0 | 16%    | 117       | 7.05 m     |
| Career       | 805   | 4    | 101.2 | 3.02 | 201.2 | 9%     | 122       | 6.92 m     |

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length on the stumps, swinging, seaming, passing outside off (15% of deliveries, economy 1.41). Minor variations: a good length outside off (12%) and a good length in the channel (12%).

| Ball type (pitch length × pitching line) | Movement          | %   | Econ | Wkts | Beaten % |
|------------------------------------------|-------------------|-----|------|------|----------|
| a good length on the stumps              | swinging, seaming | 15% | 1.41 | 0    | 12%      |
| a good length outside off                | swinging          | 12% | 0.00 | 0    | —        |
| a good length in the channel             | swinging          | 12% | 1.38 | 0    | —        |
| full outside off                         | swinging          | 11% | 4.50 | 0    | —        |
| full wide outside off                    | swinging, seaming | 11% | 2.50 | 0    | —        |
| full on the stumps                       | swinging          | 10% | 3.27 | 0    | —        |

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

Old ball (31+ ov) · 144 balls · 0 wkts · econ 2.29

| Top ball type                | %   | Econ | Wkts |
|------------------------------|-----|------|------|
| a good length on the stumps  | 14% | 0.43 | 0    |
| a good length outside off    | 13% | 0.00 | 0    |
| a good length in the channel | 13% | 1.38 | 0    |
| full wide outside off        | 12% | 2.50 | 0    |

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

RUNS — WHERE MOST CONCEDED

**A good length down the leg side**

17% of runs (7 of 42)

Match-ups (vs left-handers)

New ball vs old ball

| Split             | Balls | Wkts | Avg | Econ | SR | False% | Med length |
|-------------------|-------|------|-----|------|----|--------|------------|
| Old ball (31+ ov) | 144   | 0    | —   | 2.29 | —  | 7%     | 6.36 m     |

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

| Split        | Balls | Wkts | Avg | Econ | SR | False% | Med length |
|--------------|-------|------|-----|------|----|--------|------------|
| Middle (4–7) | 123   | 0    | —   | 2.24 | —  | 7%     | 6.34 m     |

Scoring Profile (vs left-handers)

57% of his runs come in boundaries — a boundary every 18 balls; most runs go to the leg side (50%); runs come mostly by working him around (35% of runs).

down the ground

| Shot type  | Balls | Runs | % runs | 4s/6s | Runs/ball |
|------------|-------|------|--------|-------|-----------|
| Drive      | 7     | 18   | 38%    | 3     | 2.57      |
| Work/Nudge | 12    | 17   | 35%    | 0     | 1.42      |

Direction from ball-tracking (all scoring shots); shot type recorded on 71% of scoring balls (24/34) — groups with <5 balls omitted.

Pitch Maps & Scoring

## Where They Pitch It

Pitches it a good length on the stumps most often (15%); rarely drops short (12%).

## Where Wickets Come From

Pitch location of wicket-taking balls.

## Speed & Spells

He is ~2.6 km/h quicker in later spells, keeps his pace into the 2nd innings.

### Speed by Spell

By spell — opening burst vs later spells.

### Speed by Innings

1st vs 2nd innings of the match.

### Speed by Day

By match day — fatigue across the game.

## Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves 8 cm straighter, into the pads — economy 2.31→2.73 (over→round).

| Angle | Balls     | Pitch line | Length | Short % | Econ | Wkts | Bdry % |
|-------|-----------|------------|--------|---------|------|------|--------|
| Over  | 127 (70%) | Stumps     | 6.4 m  | 5%      | 2.31 | 0    | 61%    |
| Round | 55 (30%)  | Stumps     | —      | —       | 2.73 | 0    | 48%    |

Over the Wicket

Where he pitches it from over the wicket (127 balls).

Round the Wicket

Where he pitches it from round the wicket (55 balls).

## Sequencing & Over Construction

Release Point & Crease Use

A mid-height release point; releases tight to the stumps (39 cm out, tighter than 97% of right-arm pace); releases from the same spot almost every ball (steadier than 76% of right-arm pace).

| Crease position  | % balls | Balls | Econ | Wkts | Avg   | SR  |
|------------------|---------|-------|------|------|-------|-----|
| Tight (<45cm)    | 69%     | 495   | 3.21 | 2    | 132.5 | 248 |
| Standard (45–75) | 21%     | 154   | 2.88 | 2    | 37.0  | 77  |
| Wide (>75cm)     | 10%     | 69    | 3.04 | 0    | —     | —   |

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

| Angle            | Balls | Tight | Standard | Wide |
|------------------|-------|-------|----------|------|
| Over the wicket  | 90%   | 76%   | 24%      | 0%   |
| Round the wicket | 10%   | 0%    | 0%       | 100% |

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A swing bowler who moves it both ways (62% away / 38% in); skids through at a lower trajectory.

Generates well below avg seam and above avg swing for a pace bowler; seams it away more to left-hand batters (71%).

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

| Movement | Avg   | vs average                | Direction (vs left-handers) |
|----------|-------|---------------------------|-----------------------------|
| Swing    | 0.97° | 72nd pct (above avg)      | 62% away / 38% in           |
| Seam     | 0.47° | 13th pct (well below avg) | 71% away / 29% in           |
| Bounce   | 3.8°  | 28th pct (below avg)      | —                           |

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

— insufficient data

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (25% of play-and-misses). Overall he beats the bat 3.8% of tracked balls (false-shot 9.3%, n=182).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
