Scouting Summary

COMMON THEMES

- Off Spin, averaging 87.0 kph (up to 94.1).
- Typical length is **4-5m** (their good length); median 4.3 m.
- Stock ball is **full on the stumps, turning away, drifting in, hitting the top of off** (27% of deliveries).
- Goes round the wicket 98% of the time against left-handers.
- Turns it 3.7° on average; 22% of balls turn ≥5°.

BIGGEST THREATS

- Most dangerous length is **Full** (9 wkts, 1.9% adjusted strike).
- Danger pitching line: **Stumps**.
- Takes 31% of wickets pitching **full on the stumps**.
- Beats the bat 4.6% of tracked balls (false-shot 13.7%).
- Most likely to dismiss you **caught** (62% of wickets).
- 38% of catches are behind the wicket (keeper / slips / gully); most often to mid on: regulation, keeper, long off: regulation.

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (17% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (37%) — his main scoring release.
- Cash in when he goes **full down the leg side** (economy 5.1, beats the bat only 9%).

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 47 in his last 5 Tests vs 31 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	486	7	47.0	4.06	69.4	20%	87	4.48 m
Career	1,722	33	31.0	3.57	52.2	13%	87	4.46 m

How he gets you out	His %	Base	Index
Caught	62%	59%	1.05×
LBW	15%	20%	0.77×
Bowled	15%	17%	0.91×

Share of his 13 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index >1** = he does it more than most, <**1** = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: Mid on: regulation 1 Keeper 1 Long off: regulation 1

Cover: short 1 Midwicket: short 1 Slip: 3rd 1

Angle & variations: Round the wicket to LHB (98%), stays over to RHB

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps, turning away, drifting in, hitting the top of off (27% of deliveries, economy 3.39). Minor variations: full outside off (18%) and full in the channel (16%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	turning away, drifting in	27%	3.39	5	15%
full outside off ▶	turning away, drifting in	18%	2.91	2	11%
full in the channel ▶	turning away, drifting in	16%	1.57	2	15%
a good length outside off ▶	turning away, drifting in	13%	3.73	2	11%
full down the leg side ▶	turning away, drifting in	8%	5.07	0	9%
a good length in the channel ▶	turning away, drifting in	6%	4.93	1	18%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 202 balls · 4 wkts · econ 4.43

Top ball type	%	Econ	Wkts
full on the stumps	36%	4.17	2
full outside off	15%	2.71	0
full in the channel	13%	2.31	1
full down the leg side	9%	3.16	0

Old ball (31+ ov) · 513 balls · 9 wkts · econ 3.11

Top ball type	%	Econ	Wkts
full on the stumps	23%	2.92	3
full outside off	20%	2.97	2
full in the channel	17%	1.34	1
a good length outside off	15%	3.04	2

Most lethal: **full Stumps** (2.3 wkts/100).

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
Full on the stumps
31% of mapped wickets (4 of 13)

RUNS — WHERE MOST CONCEDED
Full on the stumps
17% of runs (71 of 415)

DANGER LINE
Stumps
5 wkts / 234 balls · 2.1% adj (2.1% raw)

DANGER LENGTH
Full
9 wkts / 472 balls · 1.9% adj (1.9% raw)

MOST LETHAL ZONE (BY RATE)
Full / Stumps
4 wkts / 169 balls · 2.2% adj (2.4% raw) · low sample

Most threatening pitching full on the stumps (9 wkts, 1.9% strike). Most wickets come from full on the stumps, while he leaks the most runs full on the stumps.

Danger by ball age

NEW BALL (≤30 OV)

—

· danger length full · 4 wkts off 202 balls

OLD BALL (31+ OV)

full Stumps

most lethal cell · 2.3 wkts/100 · danger length good length · 9 wkts off 513 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	202	4	37.2	4.43	50.5	15%	4.21 m
Old ball (31+ ov)	513	9	29.6	3.11	57.0	13%	4.39 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	174	4	30.2	4.17	43.5	11%	4.36 m
Middle (4–7)	381	6	36.5	3.45	63.5	14%	4.26 m
Tail (8–11)	160	3	25.0	2.81	53.3	15%	4.42 m

Scoring Profile (vs left-handers)

42% of his runs come in boundaries — a boundary every 17 balls; most runs go to the off side (37%); the drive hurts most (12 fours/sixes at 1.6 runs/ball).

BOUNDARY %
42%
runs in 4s/6s

ROTATED %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	84	133	32%	12	1.58
Work/Nudge	85	116	28%	6	1.36
Cut	41	57	14%	4	1.39
Sweep	19	57	14%	12	3.00
Slog	12	36	9%	6	3.00

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (249/249) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at wide of 6th — pitches around stumps and moves it back.

Runs come mostly on the off side (55%).

Where They Pitch It

Pitches it full on the stumps most often (23%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps, but strikes most often pitching on the stumps.

Speed & Spells

He holds his pace across spells, is quicker in the 2nd innings, and is ~2.1 km/h quicker later in the match.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively round the wicket to left-handers (98%, 703 balls); the over the wicket sample (12 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	12 (2%)	Down leg	—	—	4.00	0	50%
Round	703 (98%)	Stumps	4.3 m	0%	3.47	13	42%

Over the Wicket

Over the wicket — only 12 balls to left-handers, too few to read into.

Round the Wicket

Where he pitches it from round the wicket (703 balls).

Sequencing & Over Construction

Consistent with his length (length spread ± 1.2 m; more repeatable than 47% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 31 dismissals, the wicket ball lands about 35 cm shorter than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.4 m	0%	3.38	0.0%
Ball 2	4.5 m	0%	4.06	5.6%
Ball 3	4.3 m	0%	3.39	0.0%
Ball 4	4.2 m	0%	3.56	0.8%
Ball 5	4.2 m	0%	3.20	3.3%
Ball 6	4.4 m	0%	3.27	0.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases wide of the stumps (87 cm out, wider than 78% of right-arm spin). Comes wider over the wicket (87 cm over vs 67 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	43%	738	3.53	10	43.4	74
Wide (>75cm)	56%	966	3.61	23	25.3	42

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	59%	0%	28%	72%
Round the wicket	41%	2%	65%	34%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A moderate spinner of the ball; skids it on with lower bounce.

Generates about average turn and below avg drift for a spin bowler; turns it away more to left-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.51°	35th pct (below avg)	8% away / 92% in
Turn	3.50°	40th pct (about average)	100% away / 0% in
Bounce	3.9°	10th pct (well below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / Stumps** (21% of play-and-misses). Overall he beats the bat 4.6% of tracked balls (false-shot 13.7%, n=715).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
