Scouting Summary

COMMON THEMES

- Right Fast, averaging 131.5 kph (up to 139.9).
- Typical length is **7-8m** (their good length); median 7.0 m.
- Stock ball is a **good length wide outside off, swinging away, seaming away, passing outside off** (16% of deliveries).
- Goes round the wicket 53% of the time against left-handers.
- Round the wicket** he shifts his pitching line from down leg to wide of 6th.

BIGGEST THREATS

- Most dangerous length is **Good Length** (15 wkts, 2.5% adjusted strike).
- Danger pitching line: **Down leg** (over the wicket).
- Takes 23% of wickets pitching a **good length down the leg side**.
- Beats the bat 7.7% of tracked balls (false-shot 15.2%).
- Most likely to dismiss you **caught** (77% of wickets).
- 70% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 3rd, midwicket: regulation.

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (14% of runs).
- Short ball: 28% of deliveries, economy 2.4 — 6 wkts from 318 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (39%) — his main scoring release.
- Cash in when he goes **full wide outside off** (economy 4.0, beats the bat only 19%).

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 23 last 5 vs 19 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	786	18	22.9	3.15	43.7	18%	131	7.28 m
Career	3,948	90	19.5	2.66	43.9	16%	131	7.14 m

Angle & variations: Round the wicket to LHB (53%), stays over to RHB · slower balls 2.2% (~120 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, swinging away, seaming away, passing outside off (16% of deliveries, economy 1.53). Minor variations: a good length down the leg side (13%) and a good length outside off (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	swinging away, seaming away	16%	1.53	5	16%
a good length down the leg side ▶	swinging away, seaming both ways	13%	2.53	6	20%
a good length outside off ▶	swinging both ways, seaming away	13%	1.22	3	17%
a good length on the stumps ▶	swinging both ways, seaming both ways	10%	0.86	0	9%
full wide outside off ▶	swinging away, seaming both ways	9%	4.04	1	19%
full outside off ▶	swinging away, seaming both ways	7%	4.95	1	6%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 463 balls · 13 wkts · econ 2.31

Top ball type	%	Econ	Wkts
a good length wide outside off	17%	1.46	4
a good length outside off	16%	1.00	1
a good length down the leg side	13%	1.30	4
a good length on the stumps	12%	0.78	0

Most lethal: **good length Down leg** (4.5 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 671 balls · 13 wkts · econ 2.66

Top ball type	%	Econ	Wkts
a good length wide outside off	16%	1.58	1
a good length down the leg side	14%	3.38	2
a good length outside off	11%	1.44	2
back of a length down the leg side	9%	2.57	1

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST COME FROM
A good length down the leg side

Full wide outside off
14% of runs (64 of 453)

DANGER LINE
Down leg
8 wkts / 275 balls · 2.8% adj (2.9% raw)

DANGER LENGTH
Good Length
15 wkts / 609 balls · 2.5% adj (2.5% raw)

MOST LETHAL ZONE (BY RATE)
Full / Stumps
4 wkts / 57 balls · 4.3% adj (7.0% raw) · low sample

Most threatening pitching a good length down the leg side (15 wkts, 2.5% strike). Most wickets come from a good length down the leg side, while he leaks the most runs full wide outside off.

NEW BALL (≤ 30 OV)

good length Down leg

most lethal cell · 4.5 wkts/100 · danger length good length · 13 wkts off 463 balls

OLD BALL (31+ OV)

—

· danger length full · 13 wkts off 671 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	463	13	13.7	2.31	35.6	16%	6.85 m
Old ball (31+ ov)	671	13	22.8	2.66	51.6	14%	7.31 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	540	11	21.3	2.60	49.1	16%	6.82 m
Middle (4–7)	418	10	15.8	2.27	41.8	14%	7.35 m
Tail (8–11)	176	5	16.6	2.83	35.2	14%	7.51 m

Bangs it in more with the old ball (3%→15% short); more short balls at the tail (19% vs 4% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

59% of his runs come in boundaries — a boundary every 16 balls; most runs go to the leg side (39%); the drive hurts most (26 fours/sixes at 3.0 runs/ball).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	50	149	44%	26	2.98
Work/Nudge	70	127	38%	13	1.81
Pull/Hook	14	34	10%	6	2.43
Cut	10	26	8%	5	2.60

Direction from ball-tracking (all scoring shots); shot type recorded on 73% of scoring balls (152/207) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it a good length wide outside off most often (16%); drops short often (28%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length down the leg side, but strikes most often pitching down the leg side.

Speed & Spells

He holds his pace across spells, is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to wide of 6th — economy 2.37→2.64, a wicket every 38→50 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	530 (47%)	Down leg	7.0 m	9%	2.37	14	60%
Round	604 (53%)	Wide of 6th	7.2 m	11%	2.64	12	57%

Over the Wicket

Where he pitches it from over the wicket (530 balls).

Round the Wicket

Where he pitches it from round the wicket (604 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ±2.1 m; more repeatable than 31% of pace bowlers); tends to bang it in later in the over (short 5%→14% by the 5th–6th ball); and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 29% of the time after banging one in.

Across 75 dismissals, the wicket ball lands about 51 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	6.8 m	6%	2.89	0.5%
Ball 2	6.7 m	5%	2.25	3.7%
Ball 3	7.2 m	10%	3.08	2.6%
Ball 4	7.1 m	7%	2.32	1.6%
Ball 5	7.3 m	13%	2.41	2.2%
Ball 6	7.3 m	15%	2.28	3.2%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 98% of right-arm pace); releases wide of the stumps (72 cm out, wider than 71% of right-arm pace); varies his spot on the crease a lot (more than 94% of right-arm pace). Comes wider round the wicket (72 cm over vs 96 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	33%	1,148	2.90	24	23.1	48
Wide (>75cm)	67%	2,350	2.62	56	18.3	42

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	81%	0%	41%	59%
Round the wicket	19%	0%	0%	100%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A swing bowler who moves it both ways (65% away / 35% in); gets extra bounce.

Generates above avg seam and well above avg swing for a pace bowler; seams it away more to left-hand batters (58%).

Swing by ball age to left-hand batters: new ball (≤ 25 ov, n=312) 67% away / 33% in; old ball (≥ 40 ov, n=252) 63% away / 37% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	1.06°	83rd pct (well above avg)	65% away / 35% in
Seam	0.61°	65th pct (above avg)	59% away / 41% in
Bounce	4.5°	92nd pct (well above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Down leg** (19% of play-and-misses). Overall he beats the bat 7.7% of tracked balls (false-shot 15.2%, n=1,088).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
