Scouting Summary

COMMON THEMES

- Right Fast, averaging 132.6 kph (up to 142.1).
- Typical length is **7-8m** (their good length); median 6.9 m.
- Stock ball is **a good length on the stumps, seaming both ways, swinging in, passing outside off** (22% of deliveries).
- Goes round the wicket 42% of the time against left-handers.
- Round the wicket** he shifts his pitching line from stumps to wide of 6th.

BIGGEST THREATS

- Most dangerous length is **Short** (3 wkts, 2.9% adjusted strike).
- Danger pitching line: **6th stump**.
- Takes 13% of wickets pitching **a good length on the stumps**.
- Beats the bat 8.7% of tracked balls (false-shot 20.8%).
- Most likely to dismiss you **caught** (81% of wickets).
- 63% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 2nd, slip: 3rd.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length on the stumps** (14% of runs).
- Short ball: 28% of deliveries, economy 3.4 — 9 wkts from 607 short balls.
- Away from short, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (44%) — his main scoring release.

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 12 in his last 5 Tests vs 24 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	892	32	11.6	2.50	27.9	33%	130	7.23 m
Career	6,195	132	23.8	3.04	46.9	22%	132	7.32 m

How he gets you out	His %	Base	Index
Caught	81%	68%	1.20×
Bowled	14%	18%	0.75×
LBW	5%	14%	0.38×

Share of his 37 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 10](#) [Slip: 2nd 4](#) [Slip: 3rd 3](#) [Long on: regulation 2](#)

[Cover: extra 1](#) [Fine leg: leg slip 1](#)

Angle & variations: Round the wicket to LHB (41%), stays over to RHB · slower balls 1.4% (~118 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length on the stumps, seaming both ways, swinging in, passing outside off (22% of deliveries, economy 1.92). Minor variations: a good length wide outside off (14%) and a good length outside off (12%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length on the stumps ▶	seaming both ways, swinging in	22%	1.92	4	23%
a good length wide outside off ▶	swinging both ways, seaming both ways	14%	1.94	2	18%
a good length outside off ▶	swinging in, seaming both ways	12%	2.36	5	24%
a good length down the leg side ▶	seaming both ways, swinging in	9%	2.72	3	28%
full outside off ▶	swinging both ways, seaming both ways	7%	3.95	3	21%
full on the stumps ▶	seaming both ways, swinging in	6%	3.29	3	23%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 1,328 balls · 18 wkts · econ 2.97

Top ball type	%	Econ	Wkts
a good length on the stumps	26%	1.58	1
a good length wide outside off	14%	2.01	0
a good length outside off	12%	2.13	3
a good length down the leg side	10%	2.61	2

Old ball (31+ ov) · 836 balls · 19 wkts · econ 3.23

Top ball type	%	Econ	Wkts
a good length on the stumps	17%	2.69	3
a good length wide outside off	16%	1.85	2
a good length outside off	12%	2.70	2
full outside off	8%	4.63	1

Most lethal: **good length Stumps** (2.3 wkts/100).

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length on the stumps
13% of mapped wickets (4 of 30)

A good length on the stumps
14% of runs (133 of 937)

DANGER LINE
6th stump
6 wkts / 209 balls · 2.5% adj (2.9% raw)

DANGER LENGTH
Short
3 wkts / 70 balls · 2.9% adj (4.3% raw) · low sample

MOST LETHAL ZONE (BY RATE)
Full / Stumps
3 wkts / 102 balls · 2.4% adj (2.9% raw) · low sample

Most threatening pitching short on the 6th stump (3 wkts, 2.9% strike). Most wickets come from a good length on the stumps, while he leaks the most runs a good length on the stumps.

Zone shares are over his **mapped** wickets — 7 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

NEW BALL (≤ 30 OV)

—

· danger length full · 18 wkts off 1,328 balls

OLD BALL (31+ OV)

good length Stumps

most lethal cell · 2.3 wkts/100 · danger length full · 19 wkts off 836 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	1,328	18	36.5	2.97	73.8	22%	7.16 m
Old ball (31+ ov)	836	19	23.7	3.23	44.0	18%	7.49 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	1,417	21	34.3	3.05	67.5	21%	7.11 m
Middle (4–7)	545	8	40.0	3.52	68.1	19%	7.53 m
Tail (8–11)	202	8	8.4	1.99	25.2	22%	7.94 m

Bangs it in more with the old ball (4%→15% short); more short balls at the tail (25% vs 8% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

49% of his runs come in boundaries — a boundary every 16 balls; most runs go to the leg side (44%); the drive hurts most (49 fours/sixes at 2.6 runs/ball).

BOUNDARY %

Work/Nudge	195	300	39%	19	1.54
Pull/Hook	42	101	13%	16	2.40
Cut	19	35	5%	4	1.84

Direction from ball-tracking (all scoring shots); shot type recorded on 79% of scoring balls (437/555) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at wide of 6th — pitches around stumps and moves it back.

Runs come mostly on the off side (50%).

Where They Pitch It

Pitches it a good length on the stumps most often (22%); drops short often (28%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the stumps, but strikes most often pitching on the 6th stump.

Speed & Spells

He is ~1.6 km/h quicker in later spells, is a touch slower in the 2nd innings, and loses ~1.9 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from stumps to wide of 6th — economy 3.05→3.09, a wicket every 57→60 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	1260 (58%)	Stumps	7.3 m	10%	3.05	22	50%
Round	904 (42%)	Wide of 6th	7.2 m	9%	3.09	15	47%

Over the Wicket

Where he pitches it from over the wicket (1260 balls).

Round the Wicket

Where he pitches it from round the wicket (904 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ± 2.1 m; more repeatable than 42% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 28% of the time after banging one in; and tends to strike with a straighter ball after working across the batter (29% straighter than the ball before).

Across 86 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.1 m	7%	3.07	1.4%
Ball 2	7.4 m	7%	2.90	2.7%
Ball 3	7.4 m	9%	2.76	2.2%
Ball 4	7.2 m	8%	2.61	1.1%
Ball 5	7.4 m	10%	4.17	1.4%
Ball 6	7.1 m	8%	2.84	1.4%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A low, skiddy release point (lower than 78% of right-arm pace); releases tight to the stumps (56 cm out, tighter than 82% of right-arm pace). Comes wider round the wicket (56 cm over vs 86 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	7%	378	3.22	9	22.6	42
Standard (45–75)	74%	3,930	2.97	87	22.3	45
Wide (>75cm)	19%	1,036	3.23	18	30.9	58

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	84%	8%	86%	6%
Round the wicket	16%	0%	7%	93%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A seam bowler who moves it both ways (51% away / 49% in); skids through at a lower trajectory.

Generates above avg seam and well below avg swing for a pace bowler; seams it away more to left-hand batters (51%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=396) 38% away / 62% in; old ball (≥40 ov, n=256) 37% away / 63% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.55°	10th pct (well below avg)	39% away / 61% in
Seam	0.62°	71st pct (above avg)	51% away / 49% in
Bounce	3.6°	13th pct (well below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (30% of play-and-misses). Overall he beats the bat 8.7% of tracked balls (false-shot 20.8%, n=2,067).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
